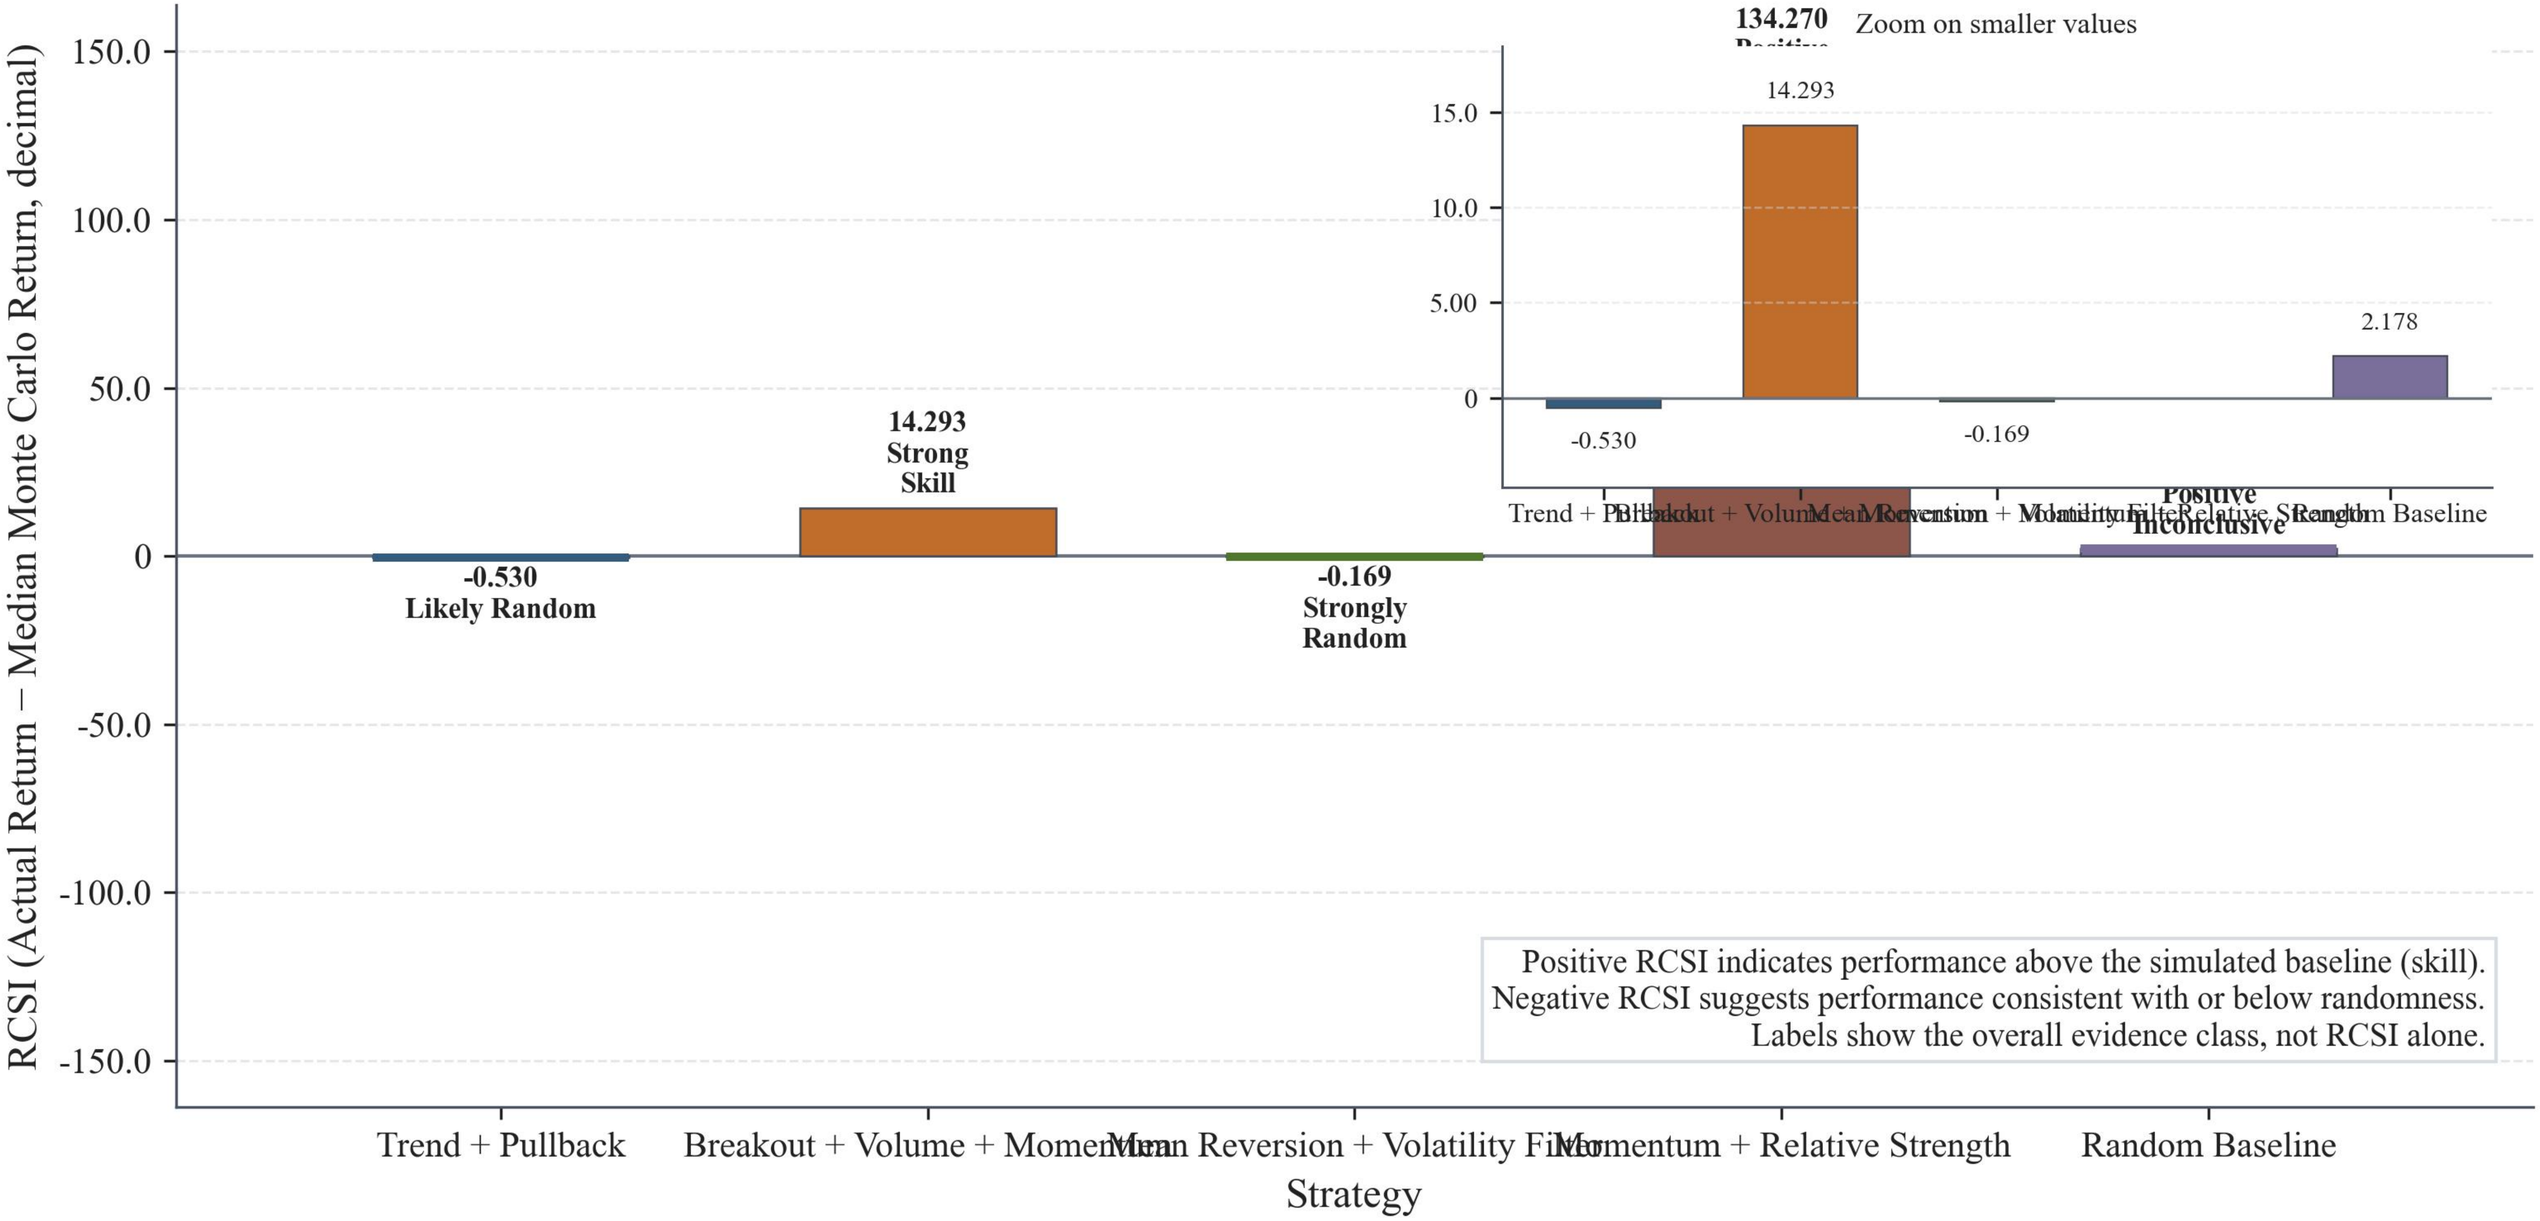
BTC-USD: Strategy Evidence and Confidence Overview

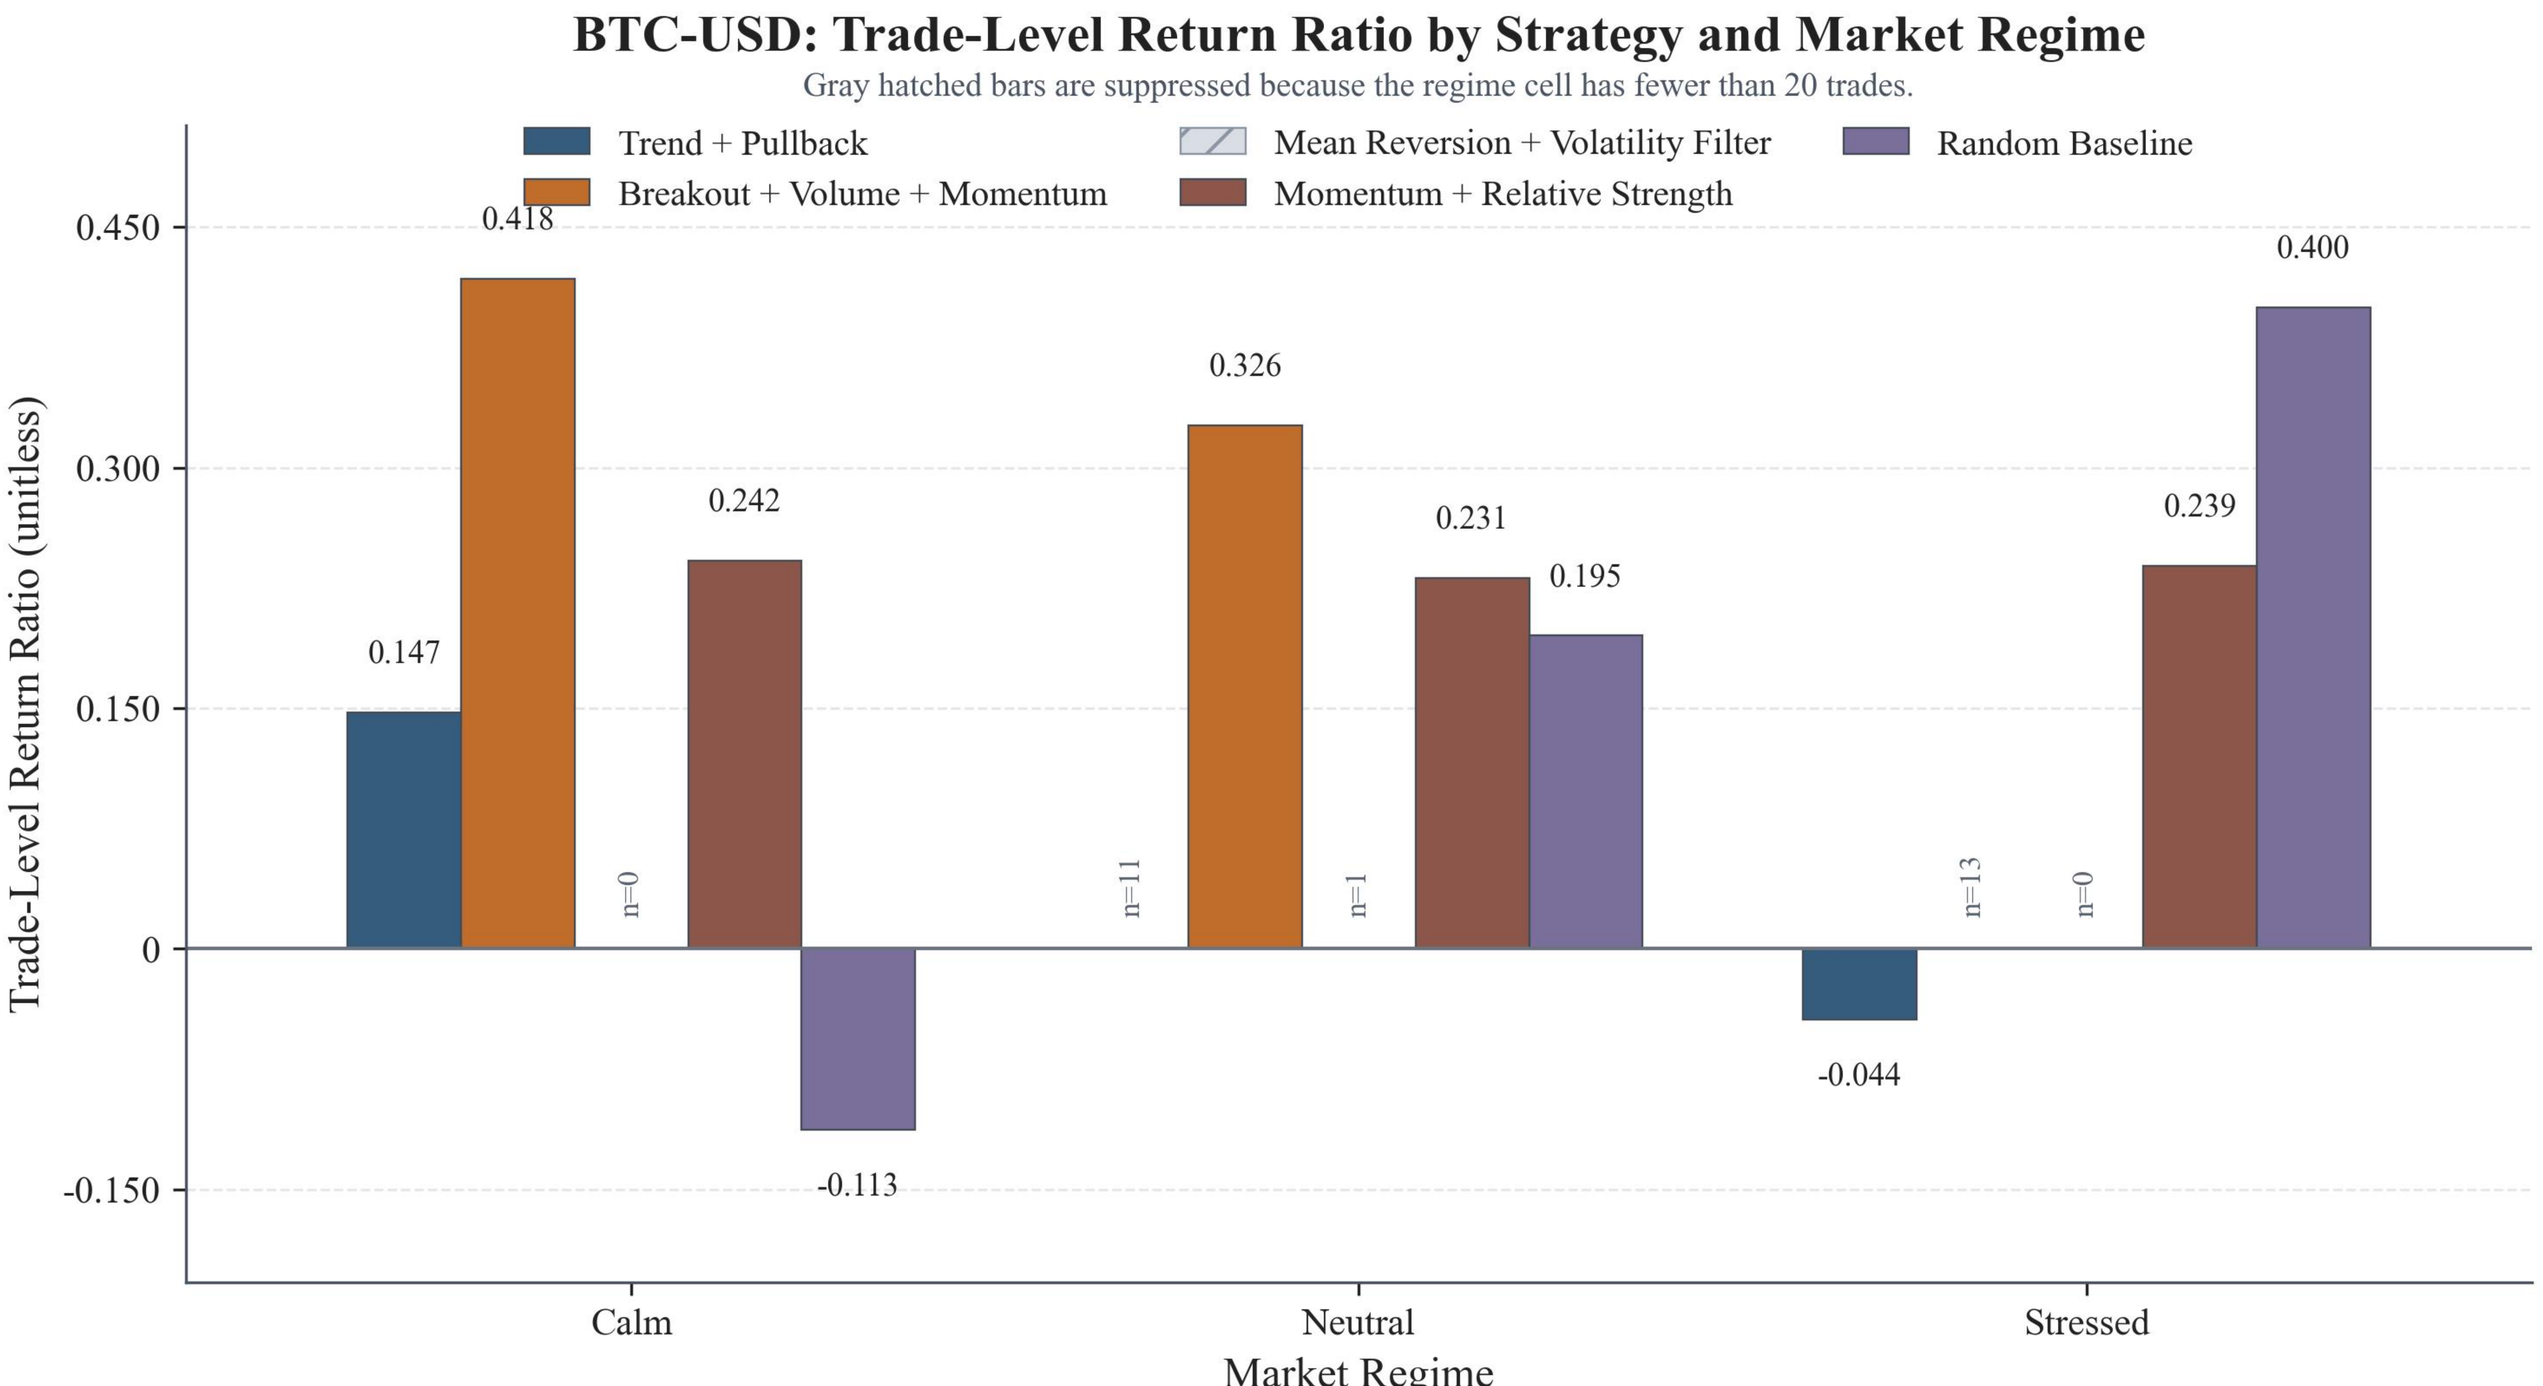
Evidence labels use scale-free statistics: p-value, percentile, normalized RCSI, robustness, and stability.

Strategy	Evidence	Verdict	Confidence	p-value	Prom.	Pctile	RCSI_z
Trend + Pullback	Likely Random	Luck	Moderate	0.821	0.09	17.9	-0.80
Breakout + Volume + Momentum	Strong Skill	Skill	High	0.011	1.94	98.9	3.72
Mean Reversion + Volatility Filter	Strongly Random	Luck	High	0.808	0.09	19.2	-1.03
Momentum + Relative Strength	Positive but Inconclusive	Inconclusive	Low	0.057	1.24	94.3	1.59
Random Baseline	Positive but Inconclusive	Inconclusive	Low	0.172	0.76	82.8	0.63

Interpretation:
Prom. = -log10(p), so larger values indicate rarer outcomes under the null.
Pctile and RCSI_z provide scale-free evidence and are more comparable across tickers.
Benchmark context appears in the comparison table and equity curve rather than this verdict summary.

BTC-USD: Regime-Conditional Skill Index by Strategy





BTC-USD: Trade-Level Return Ratio by Strategy and Market Regime
Gray hatched bars are suppressed because the regime cell has fewer than 20 trades.

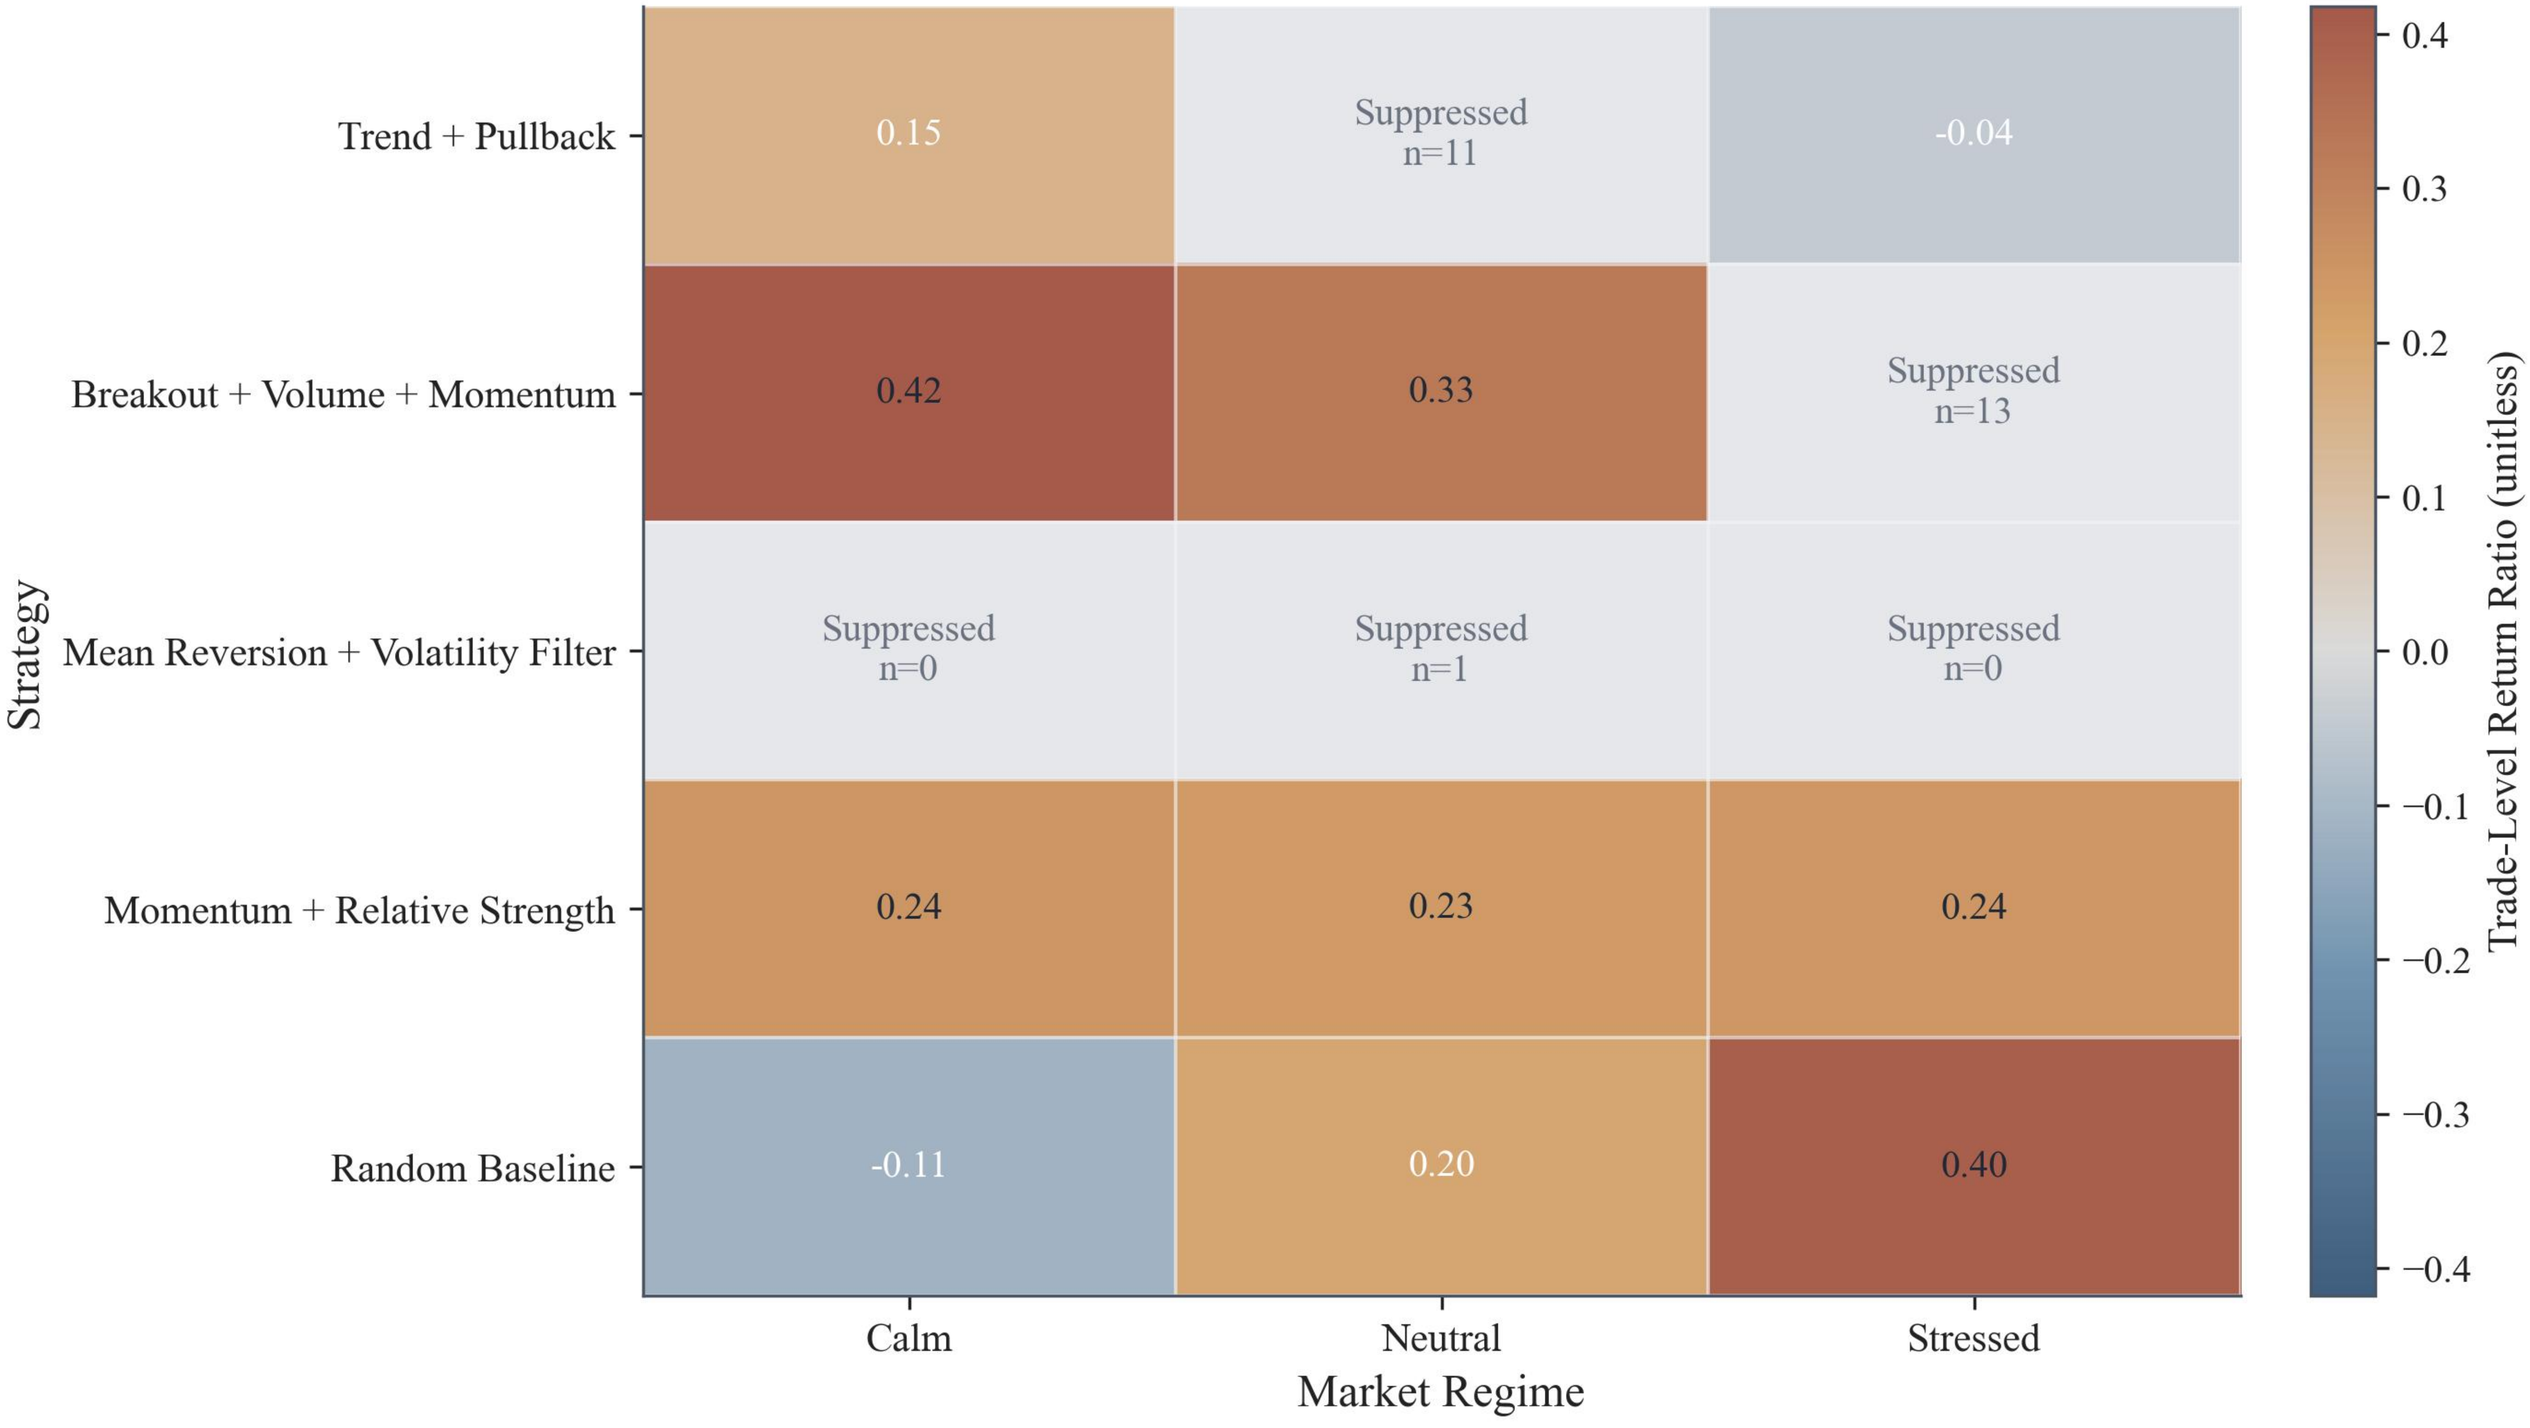
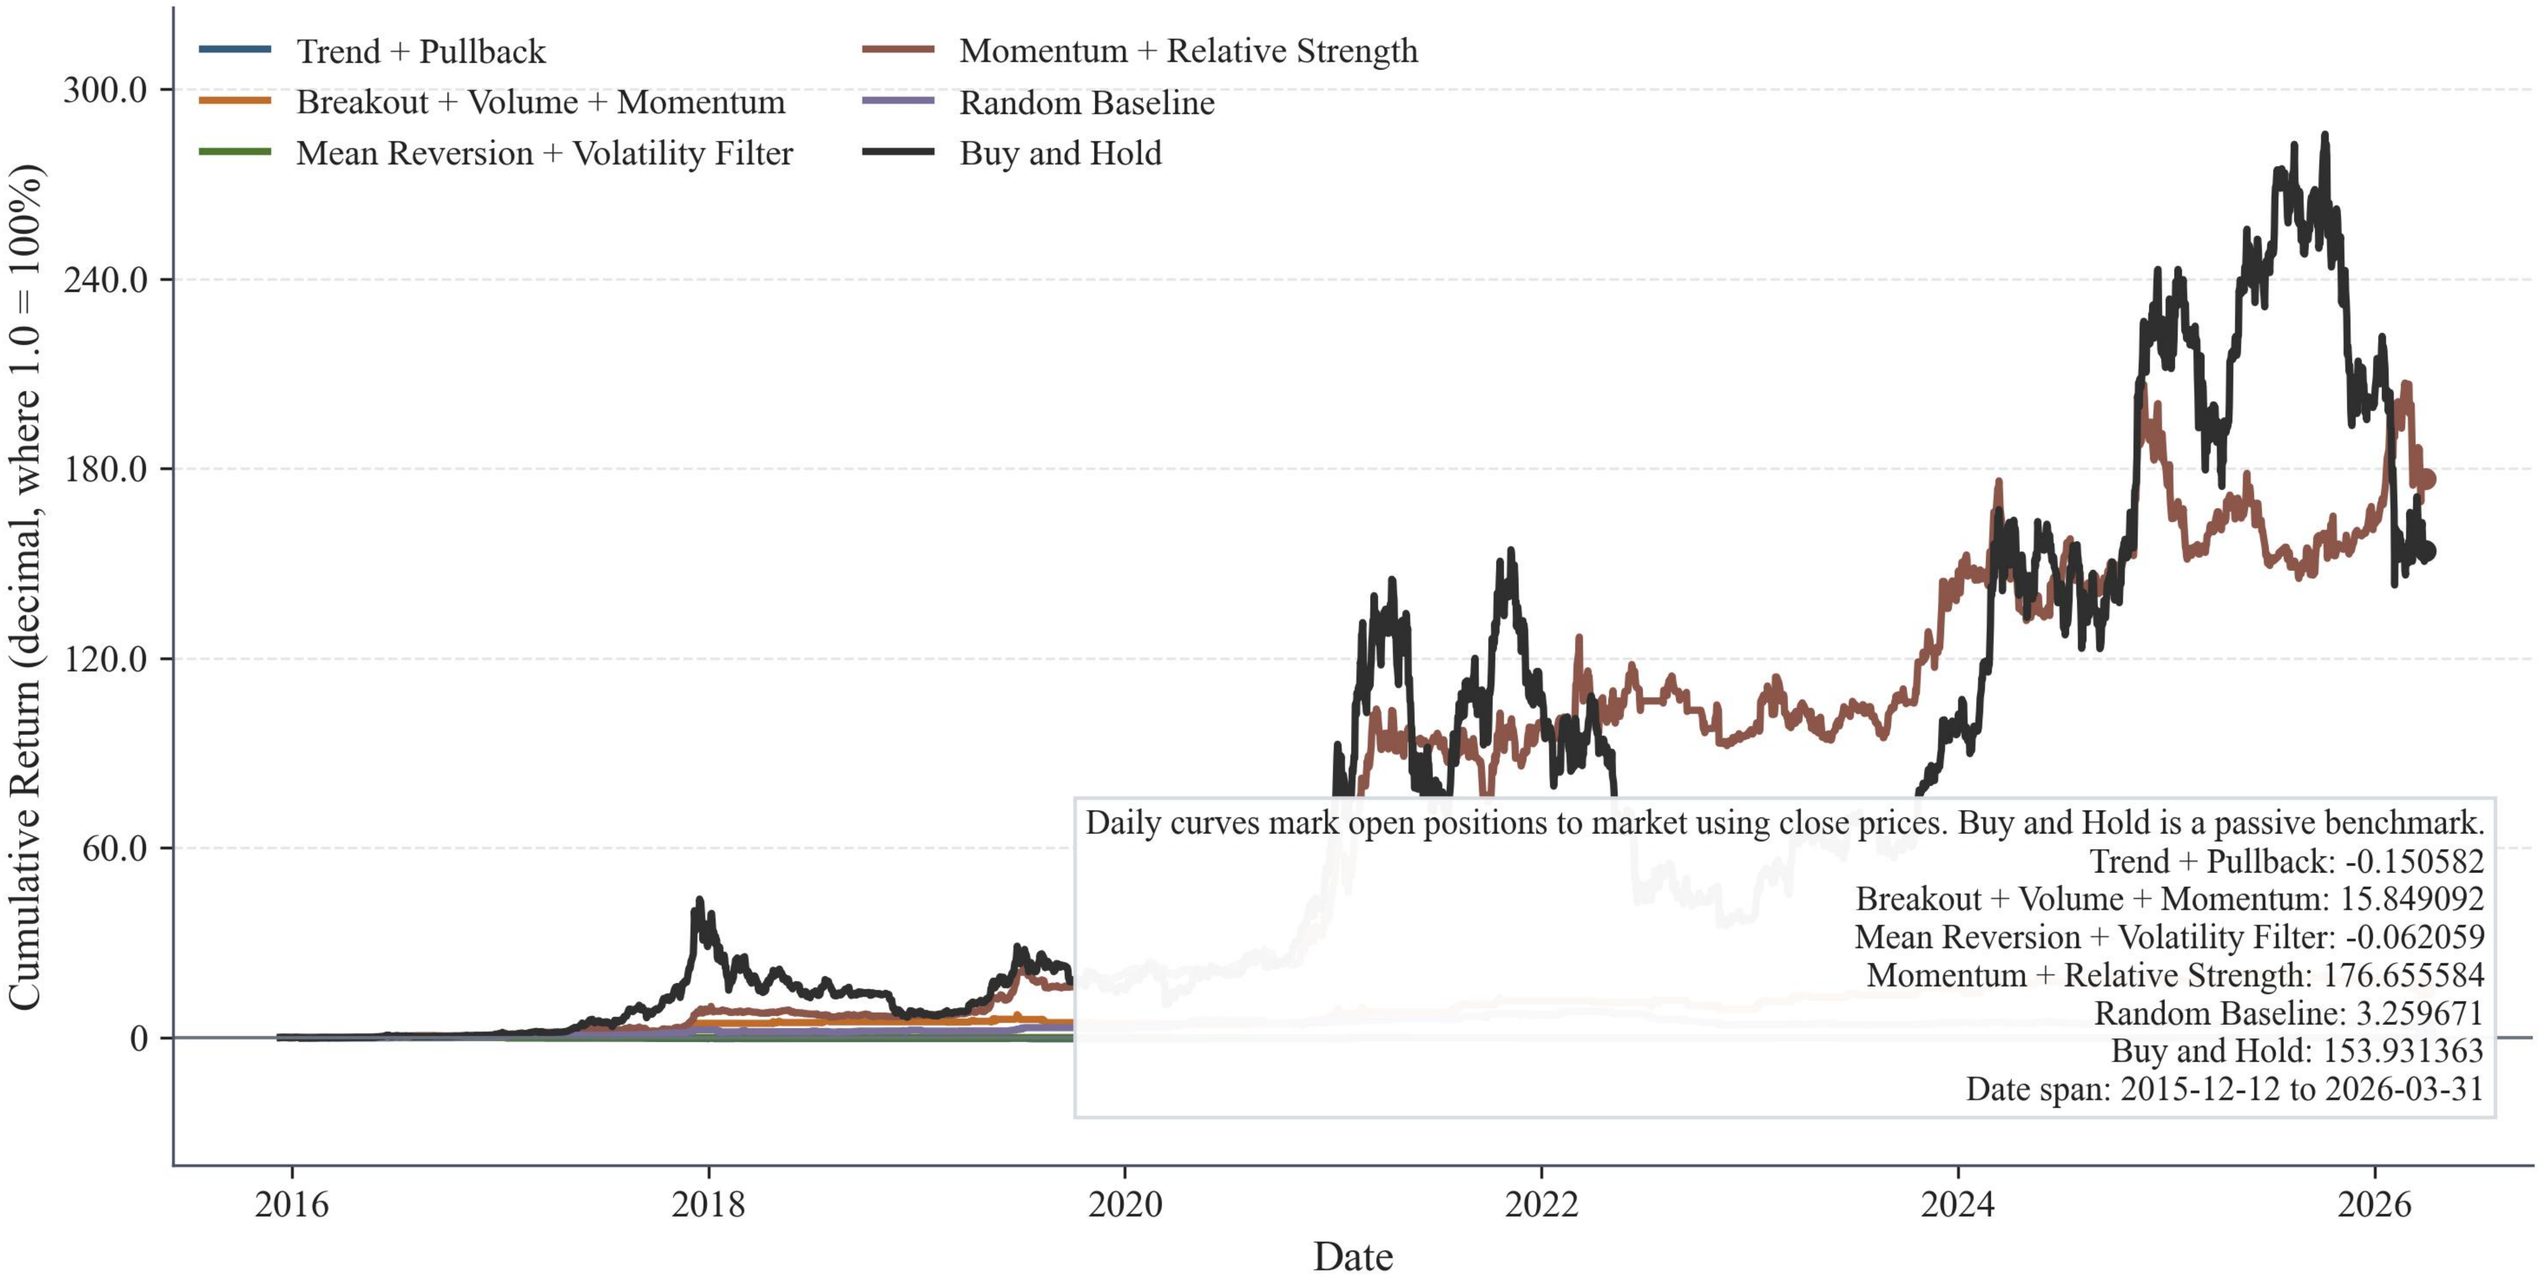
BTC-USD: Strategy Performance Across Market Regimes

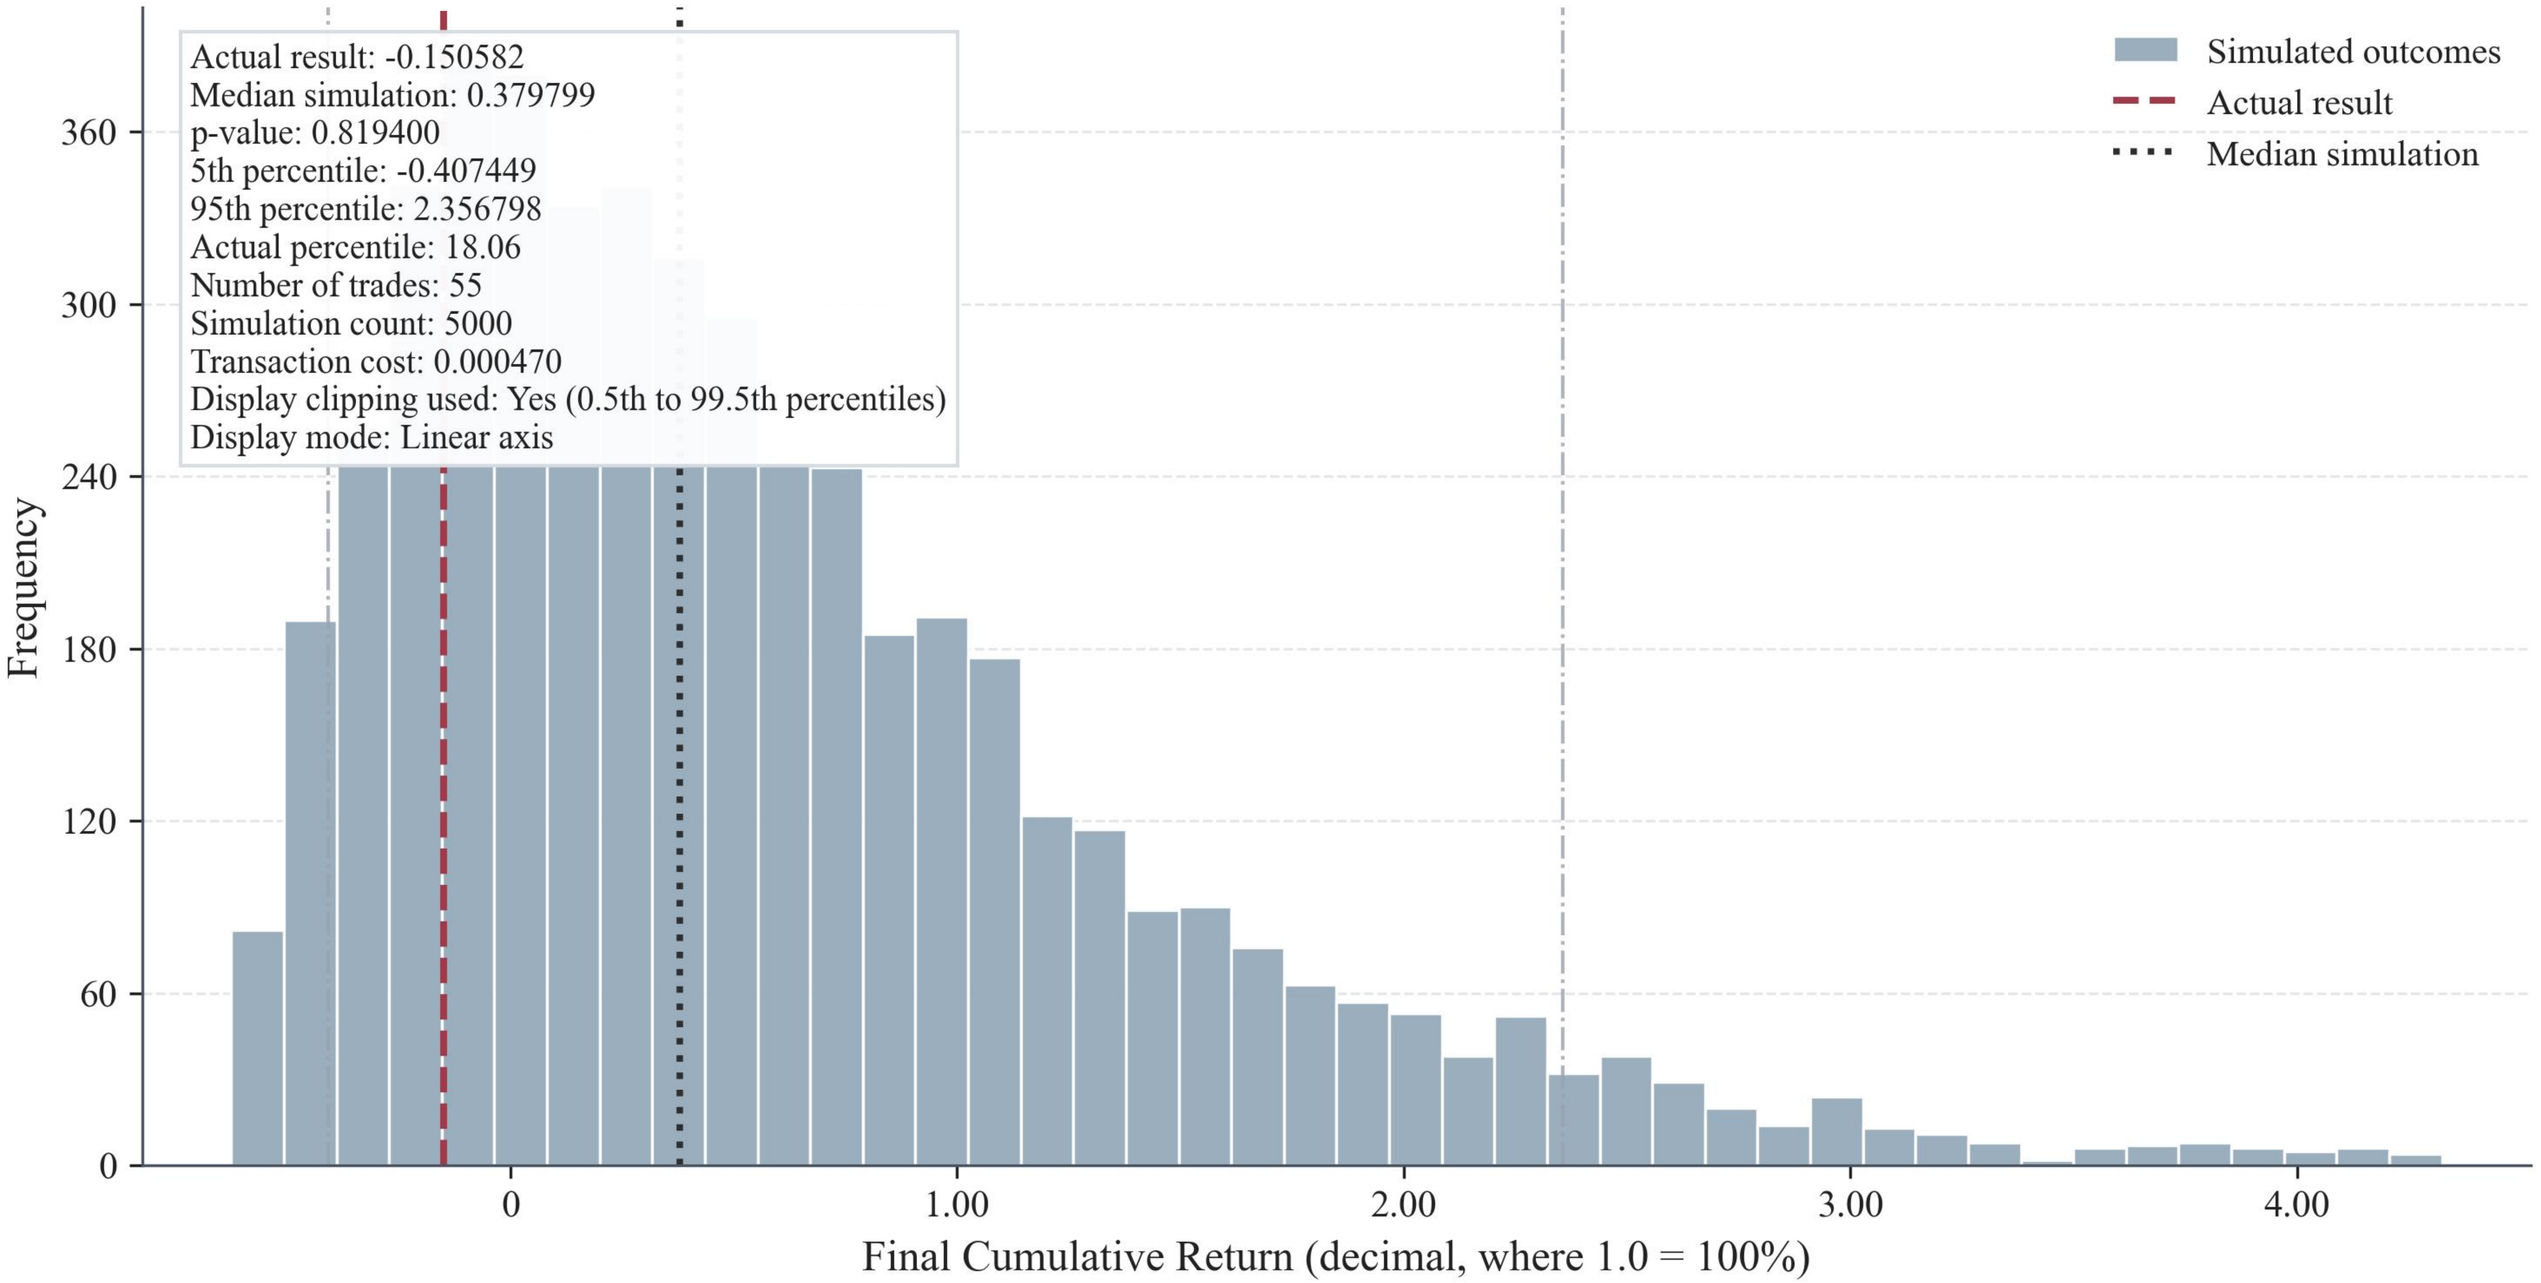
Gray cells are suppressed because the regime cell has fewer than 20 trades.



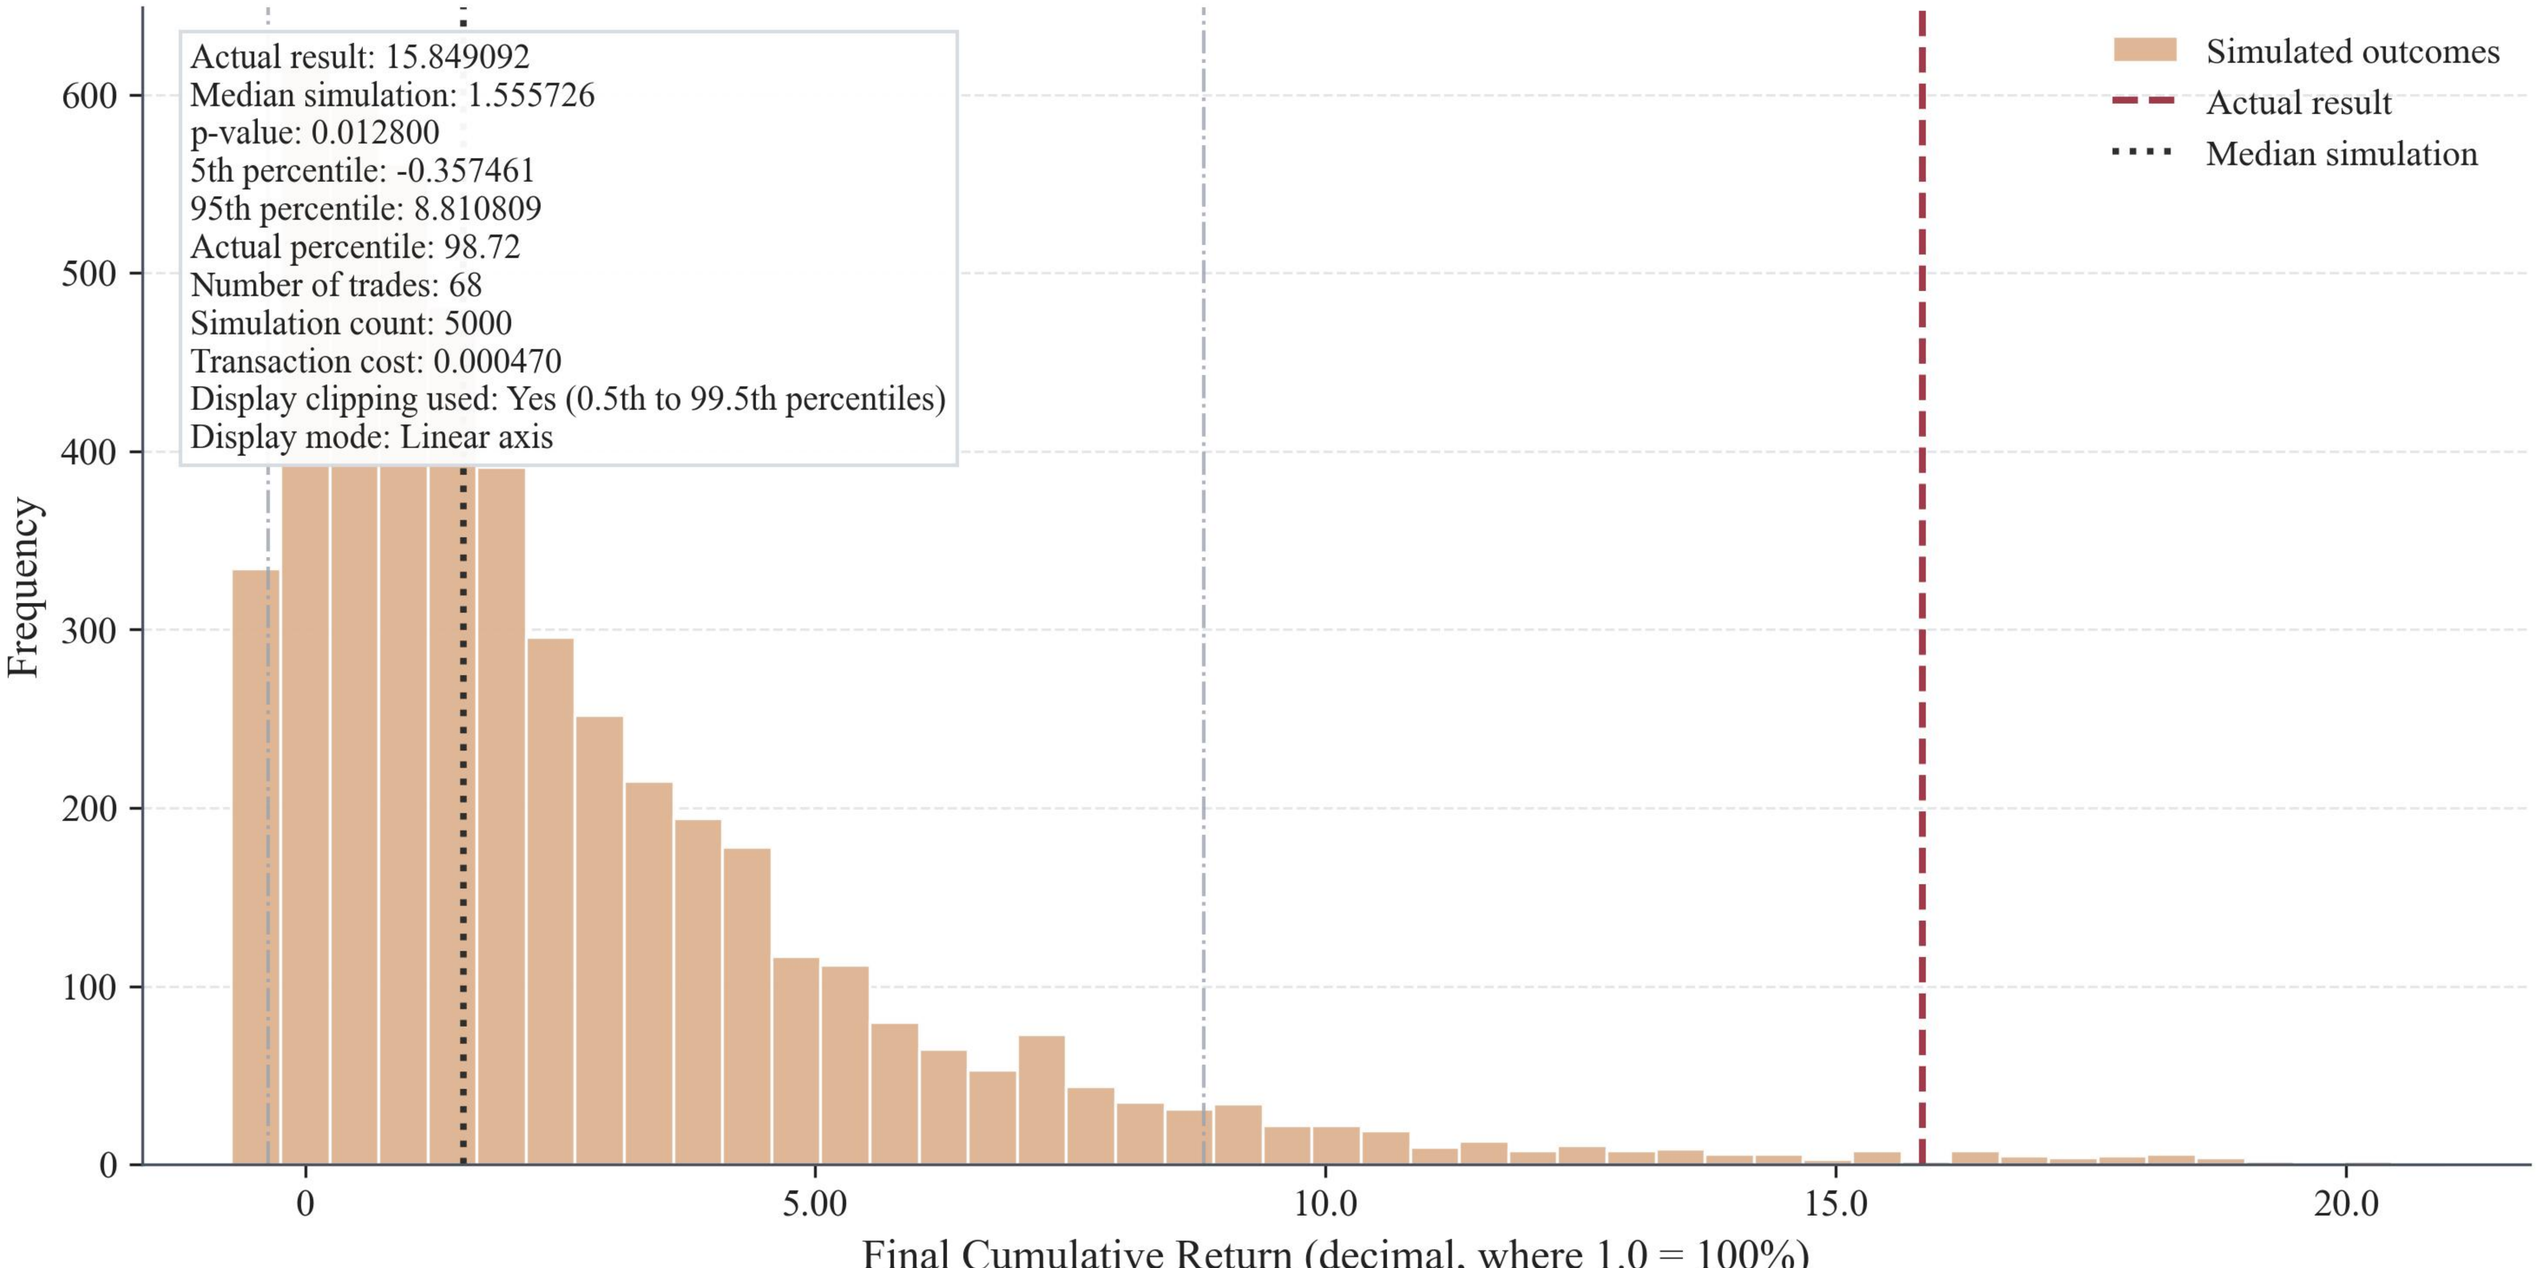
BTC-USD: Daily Equity Curves by Strategy and Benchmark



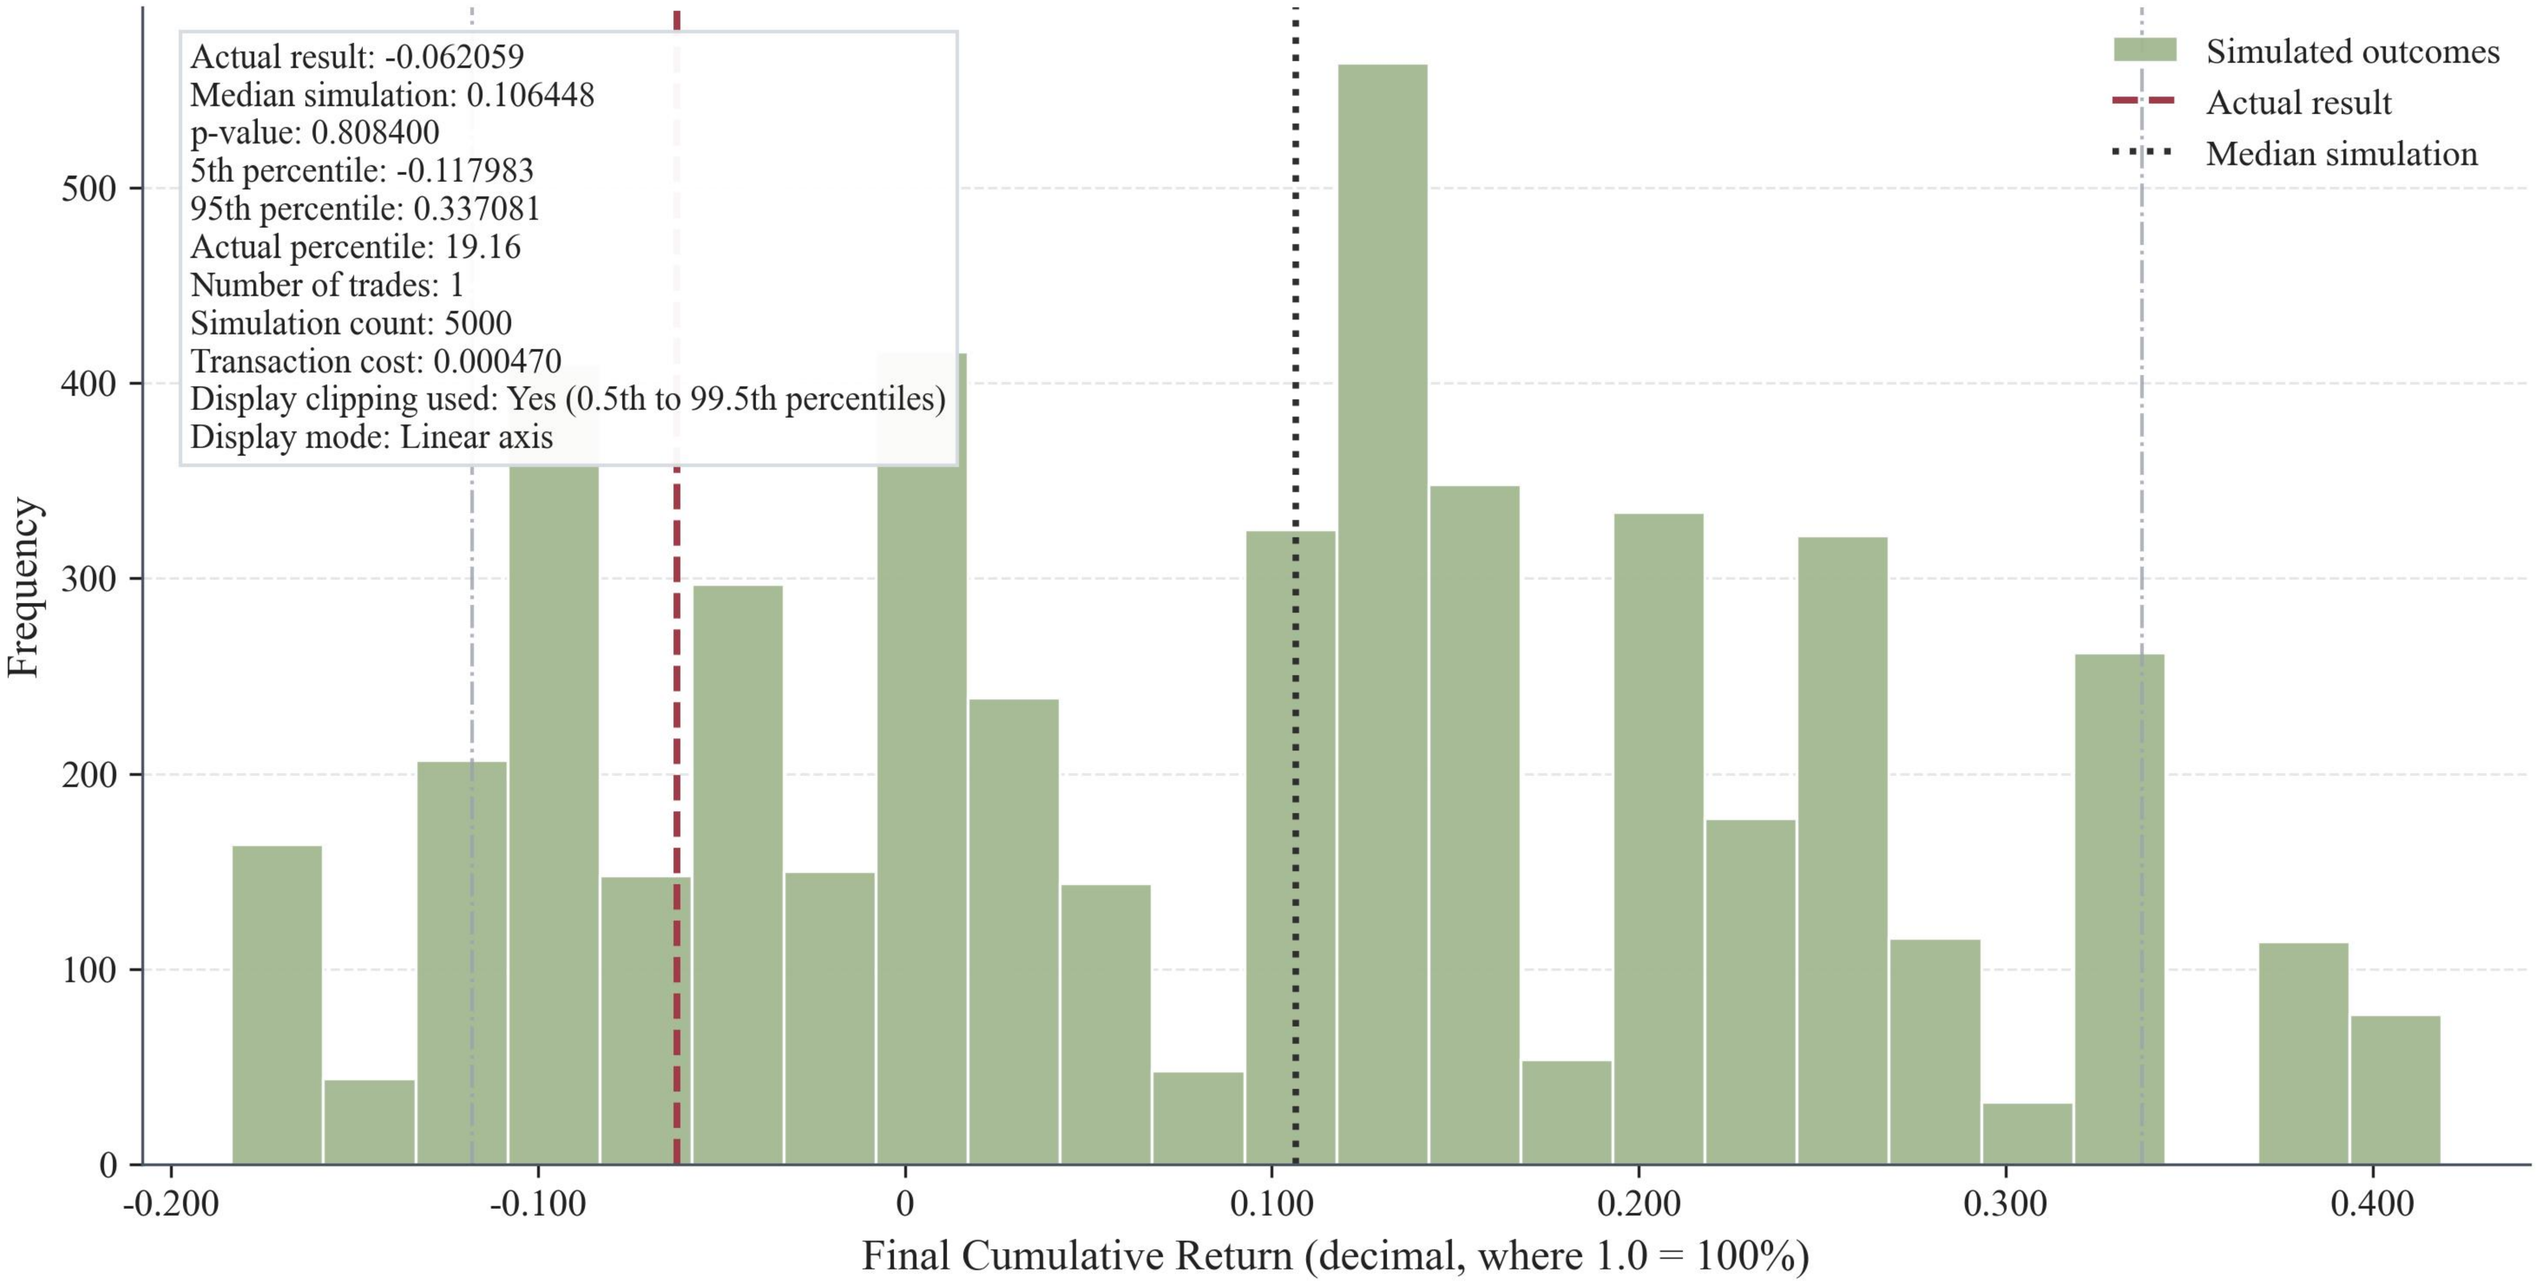
BTC-USD: Monte Carlo Distribution of Final Returns, Trend + Pullback Strategy



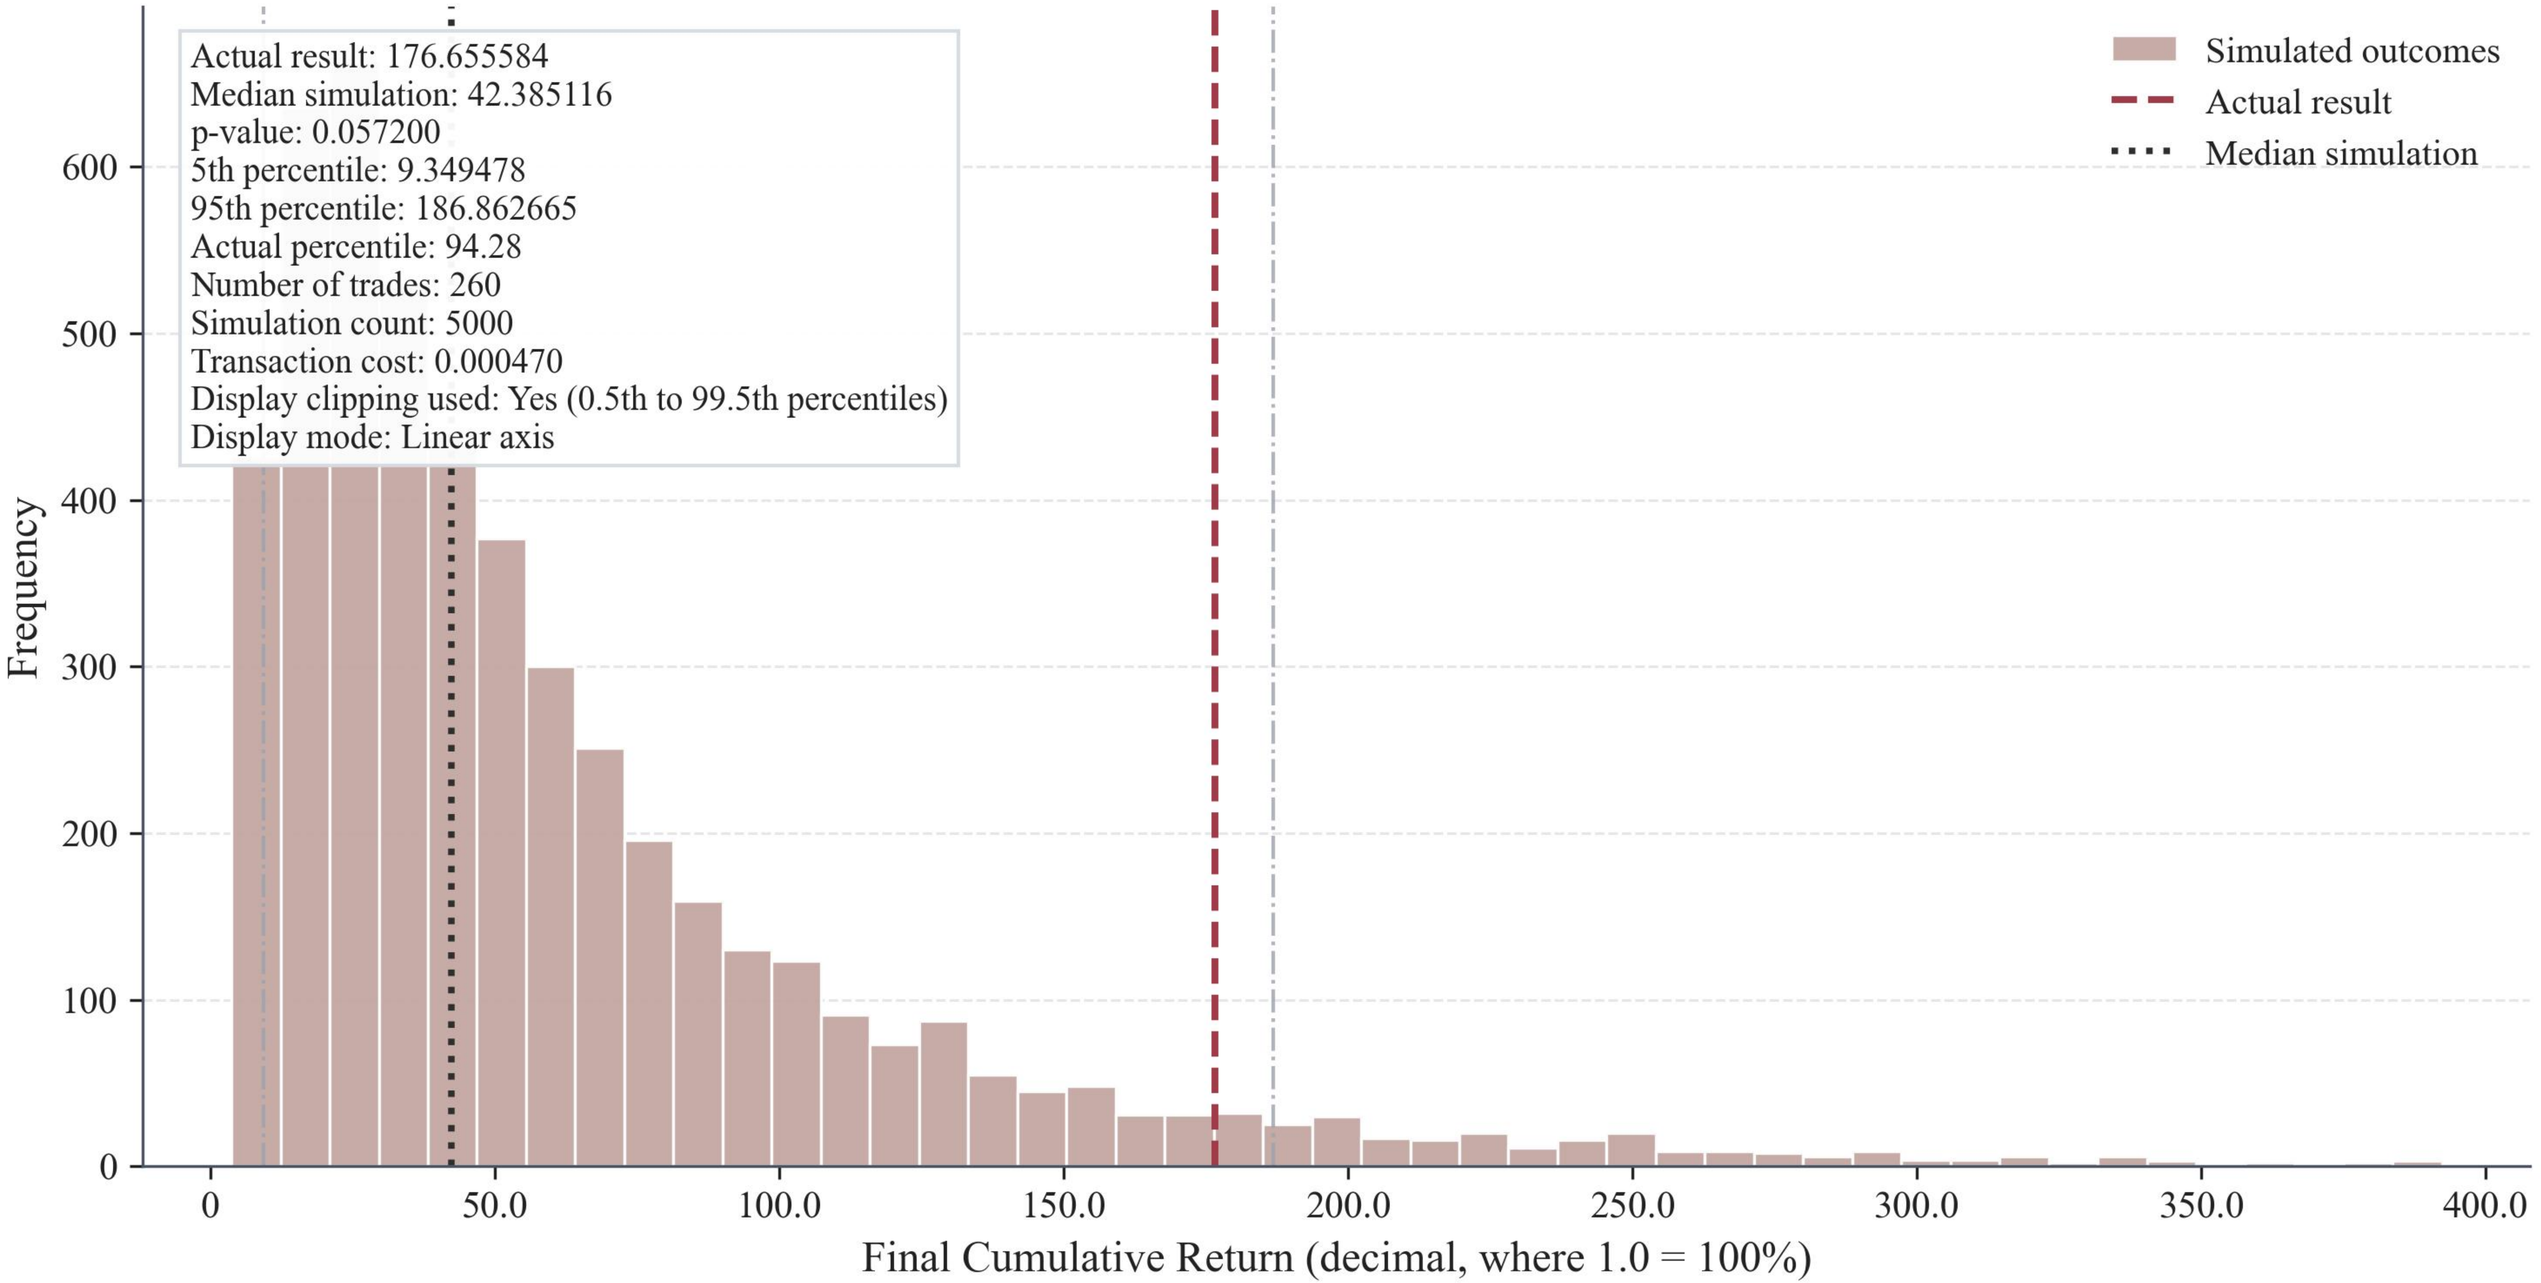
BTC-USD: Monte Carlo Distribution of Final Returns, Breakout + Volume + Momentum Strategy



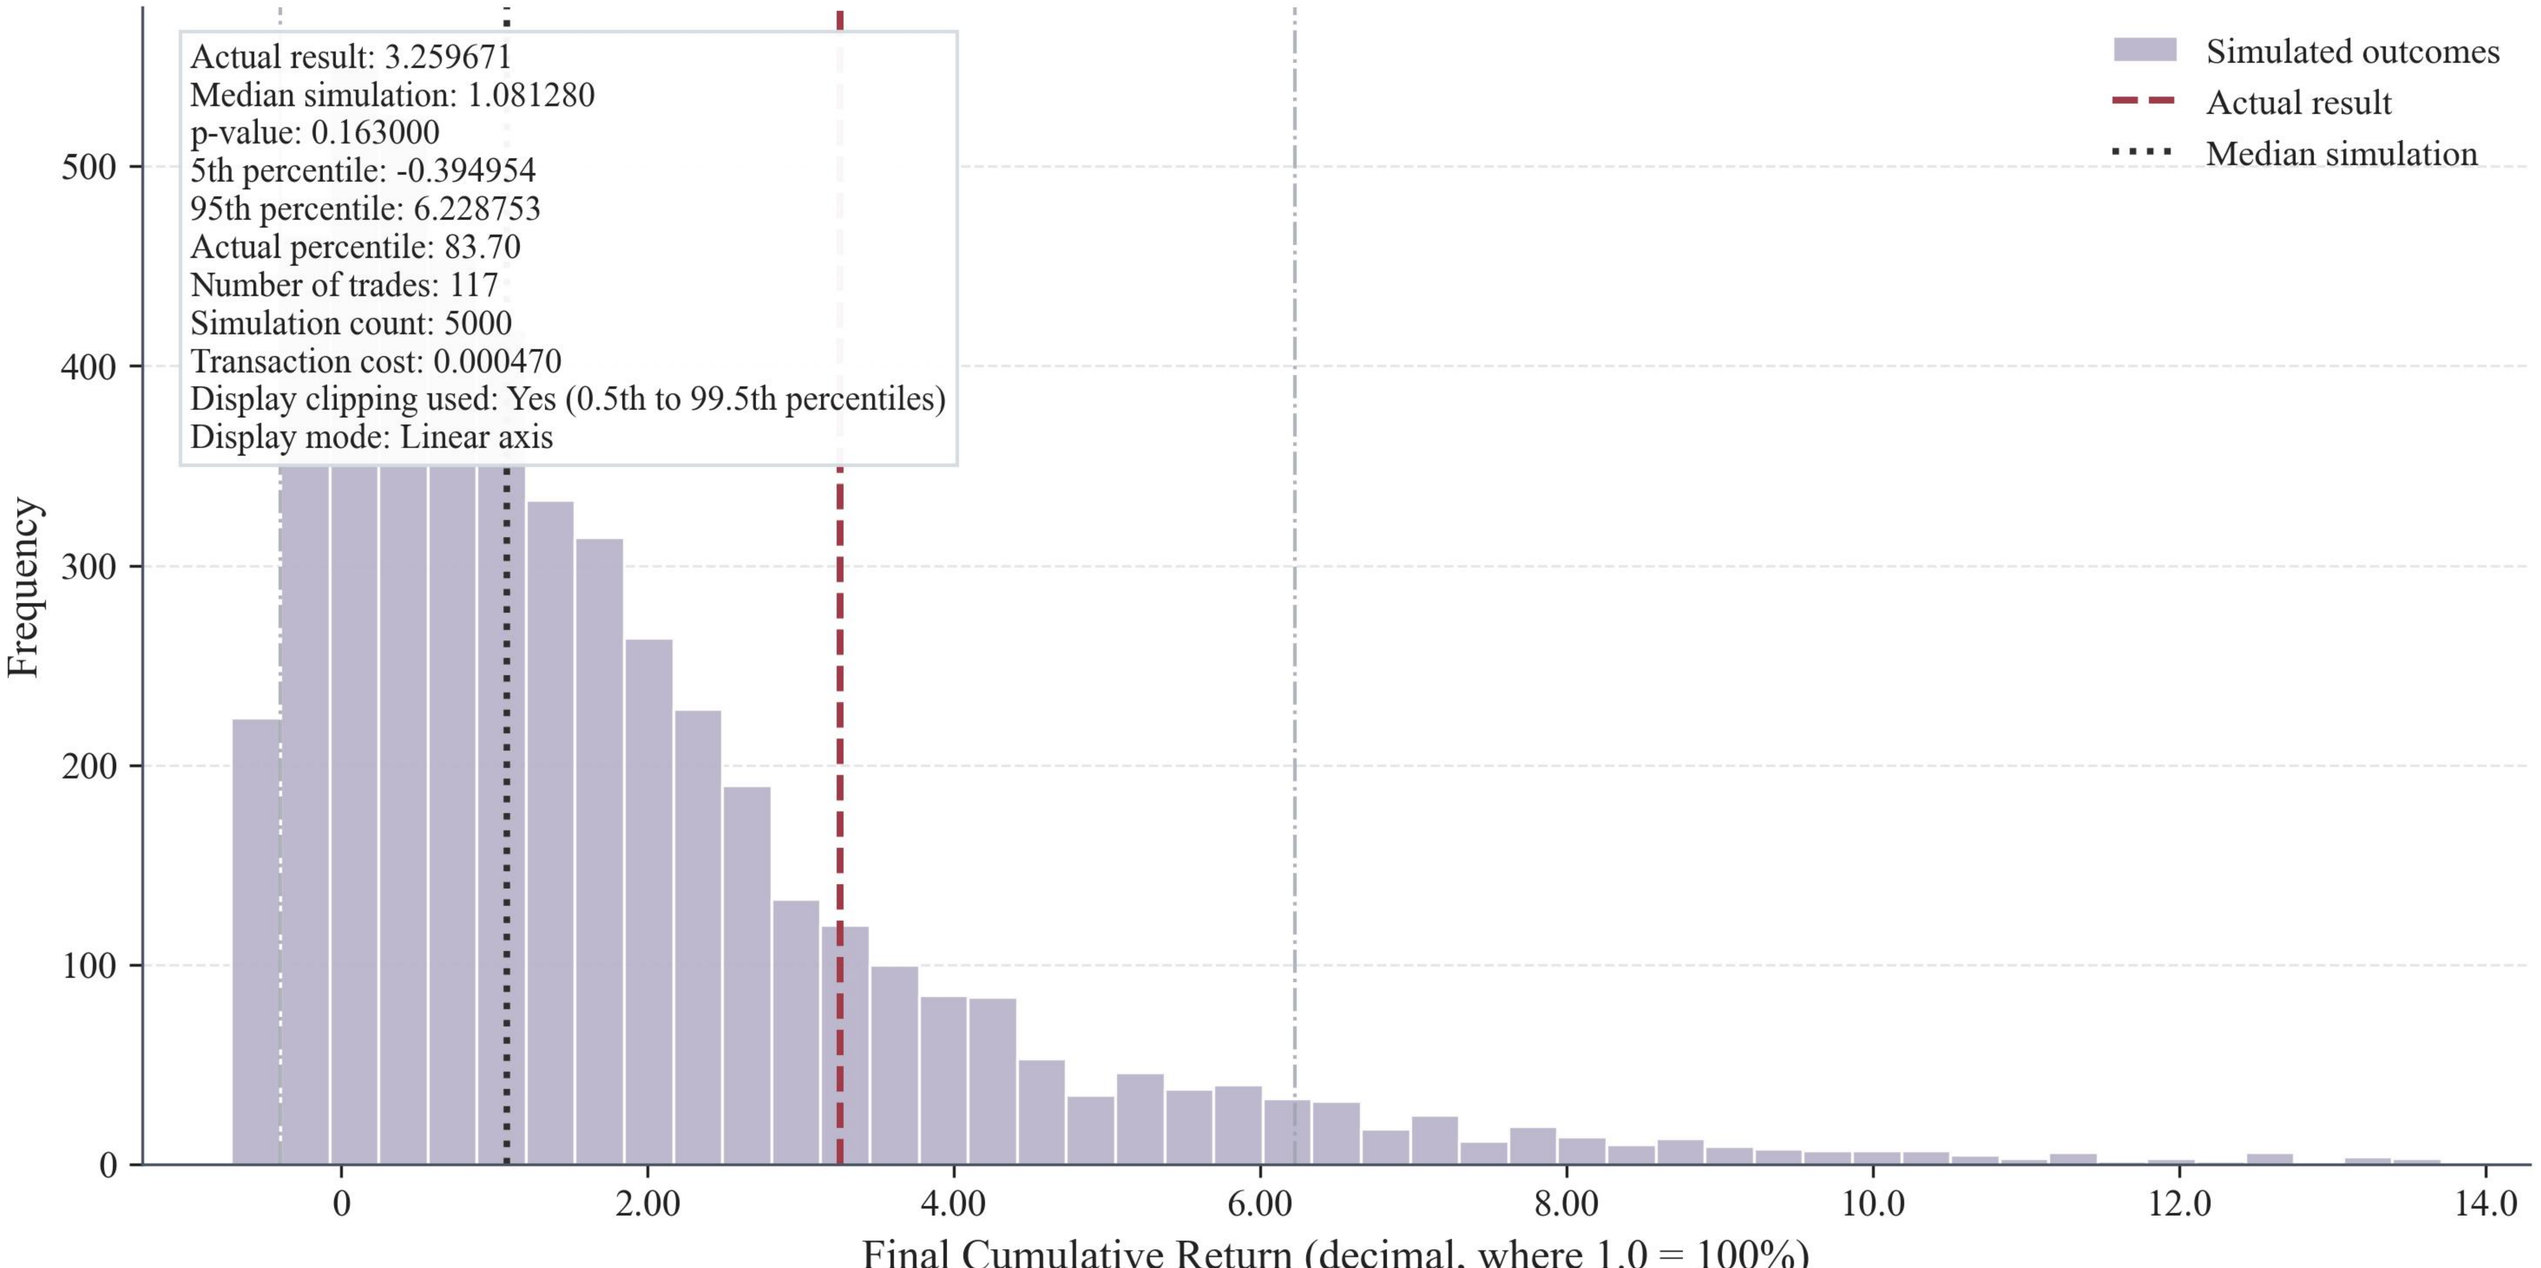
BTC-USD: Monte Carlo Distribution of Final Returns, Mean Reversion + Volatility Filter Strategy



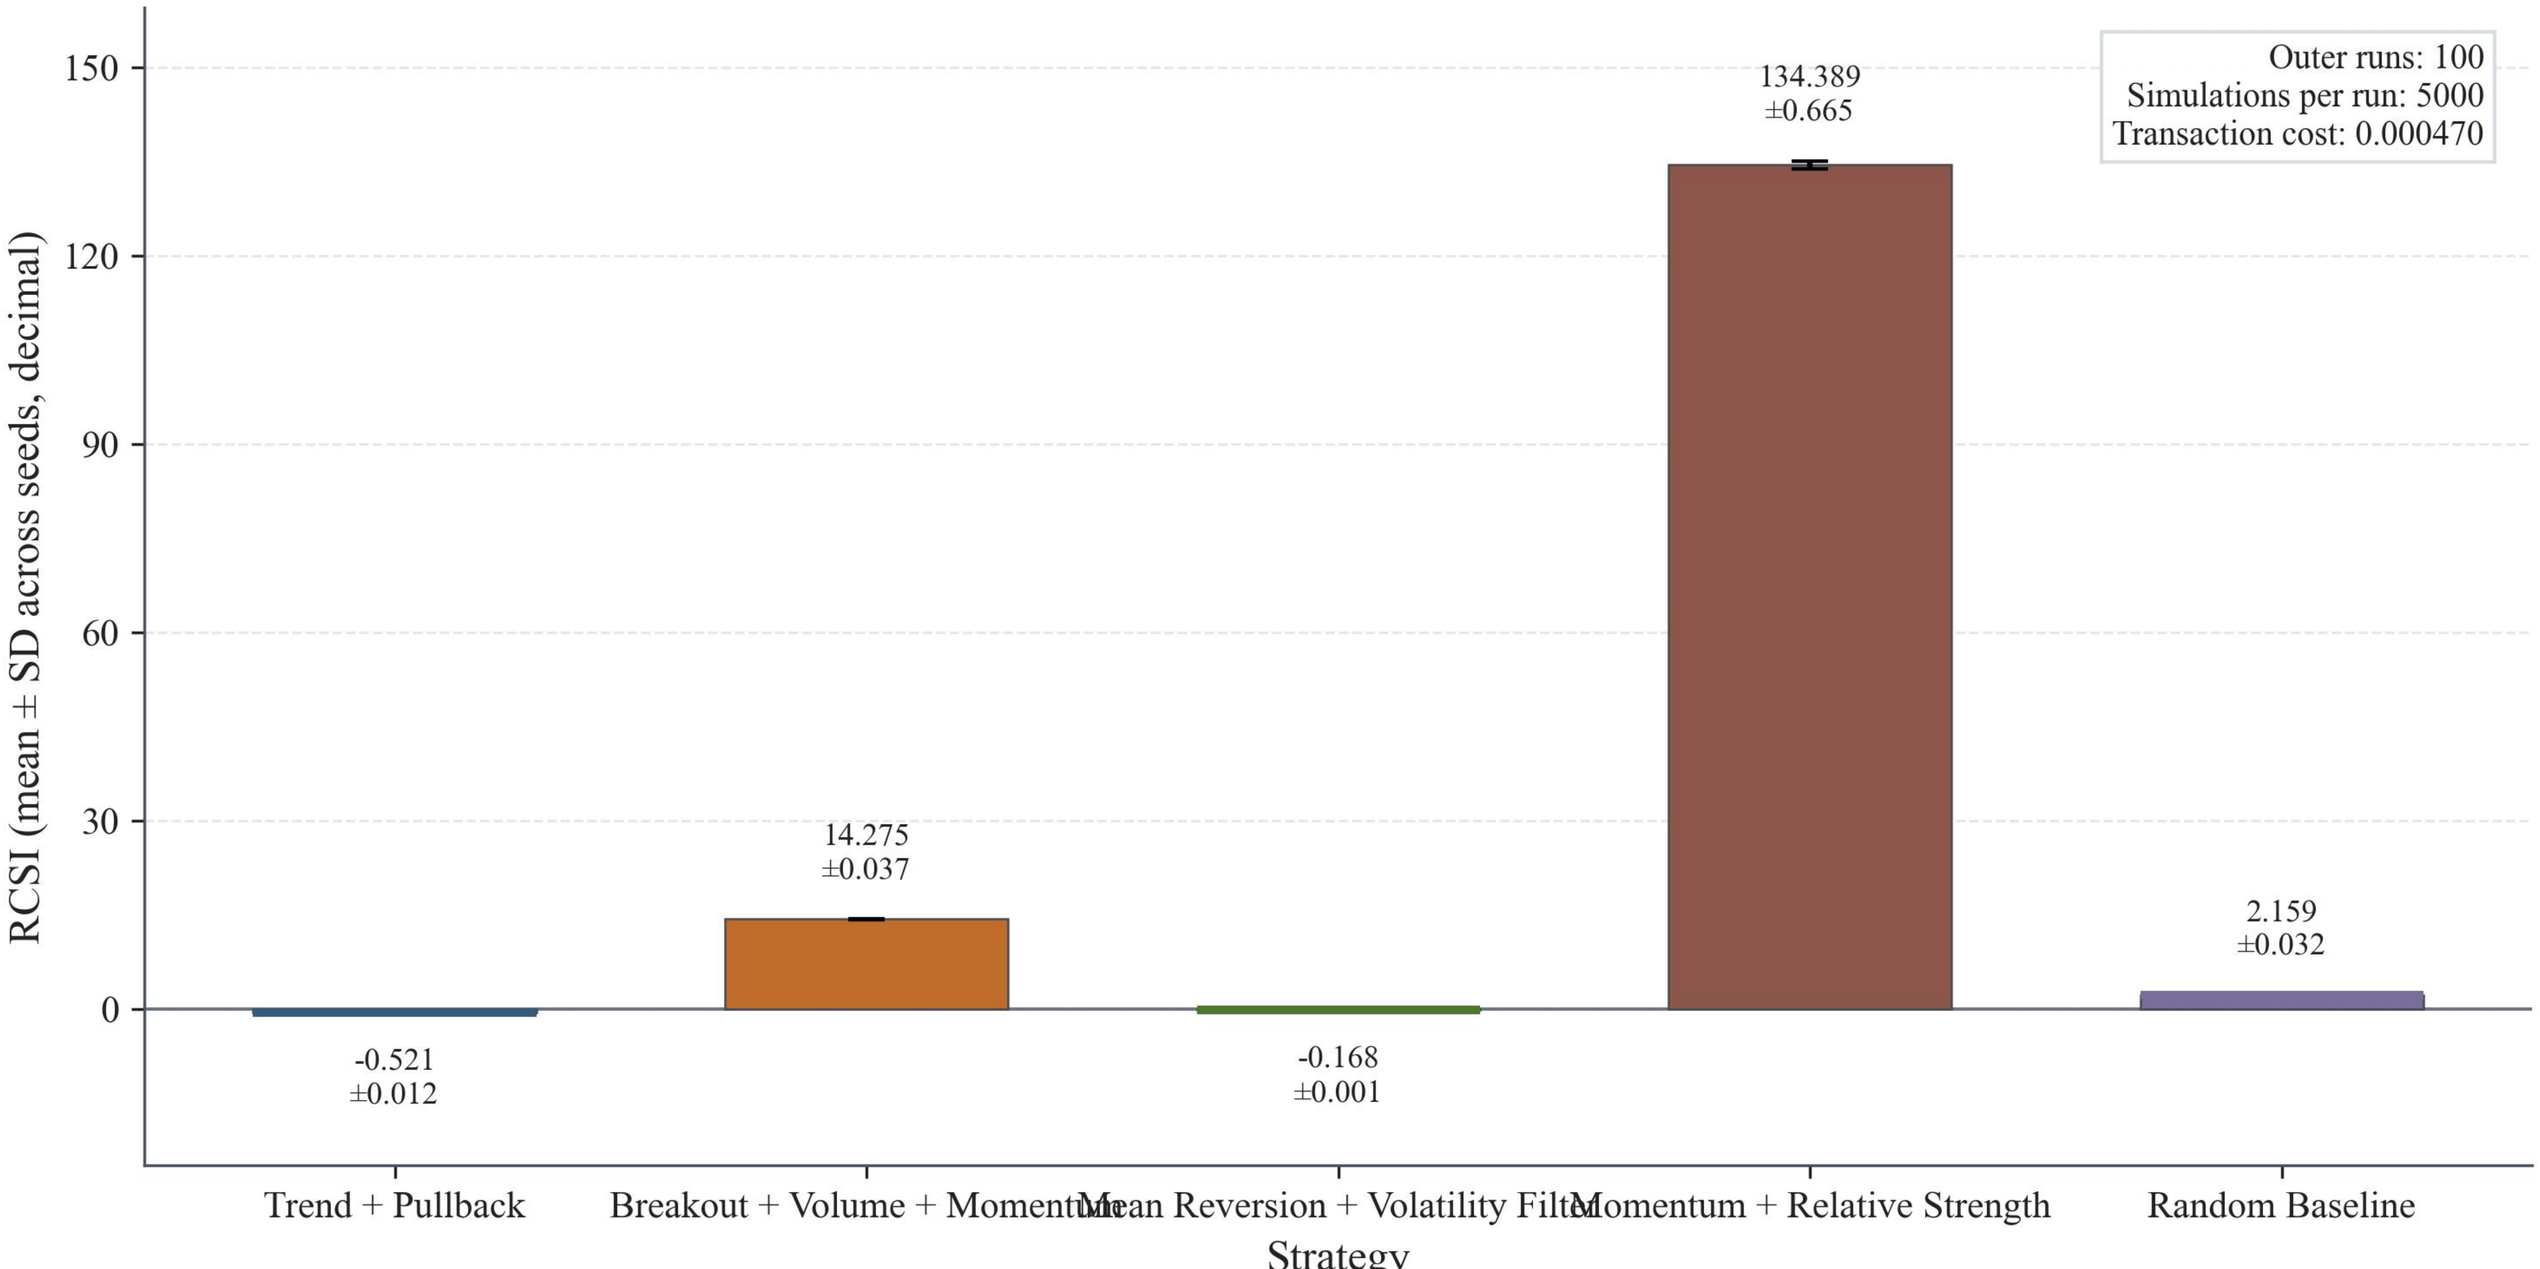
BTC-USD: Monte Carlo Distribution of Final Returns, Momentum + Relative Strength Strategy



BTC-USD: Monte Carlo Distribution of Final Returns, Random Baseline Strategy

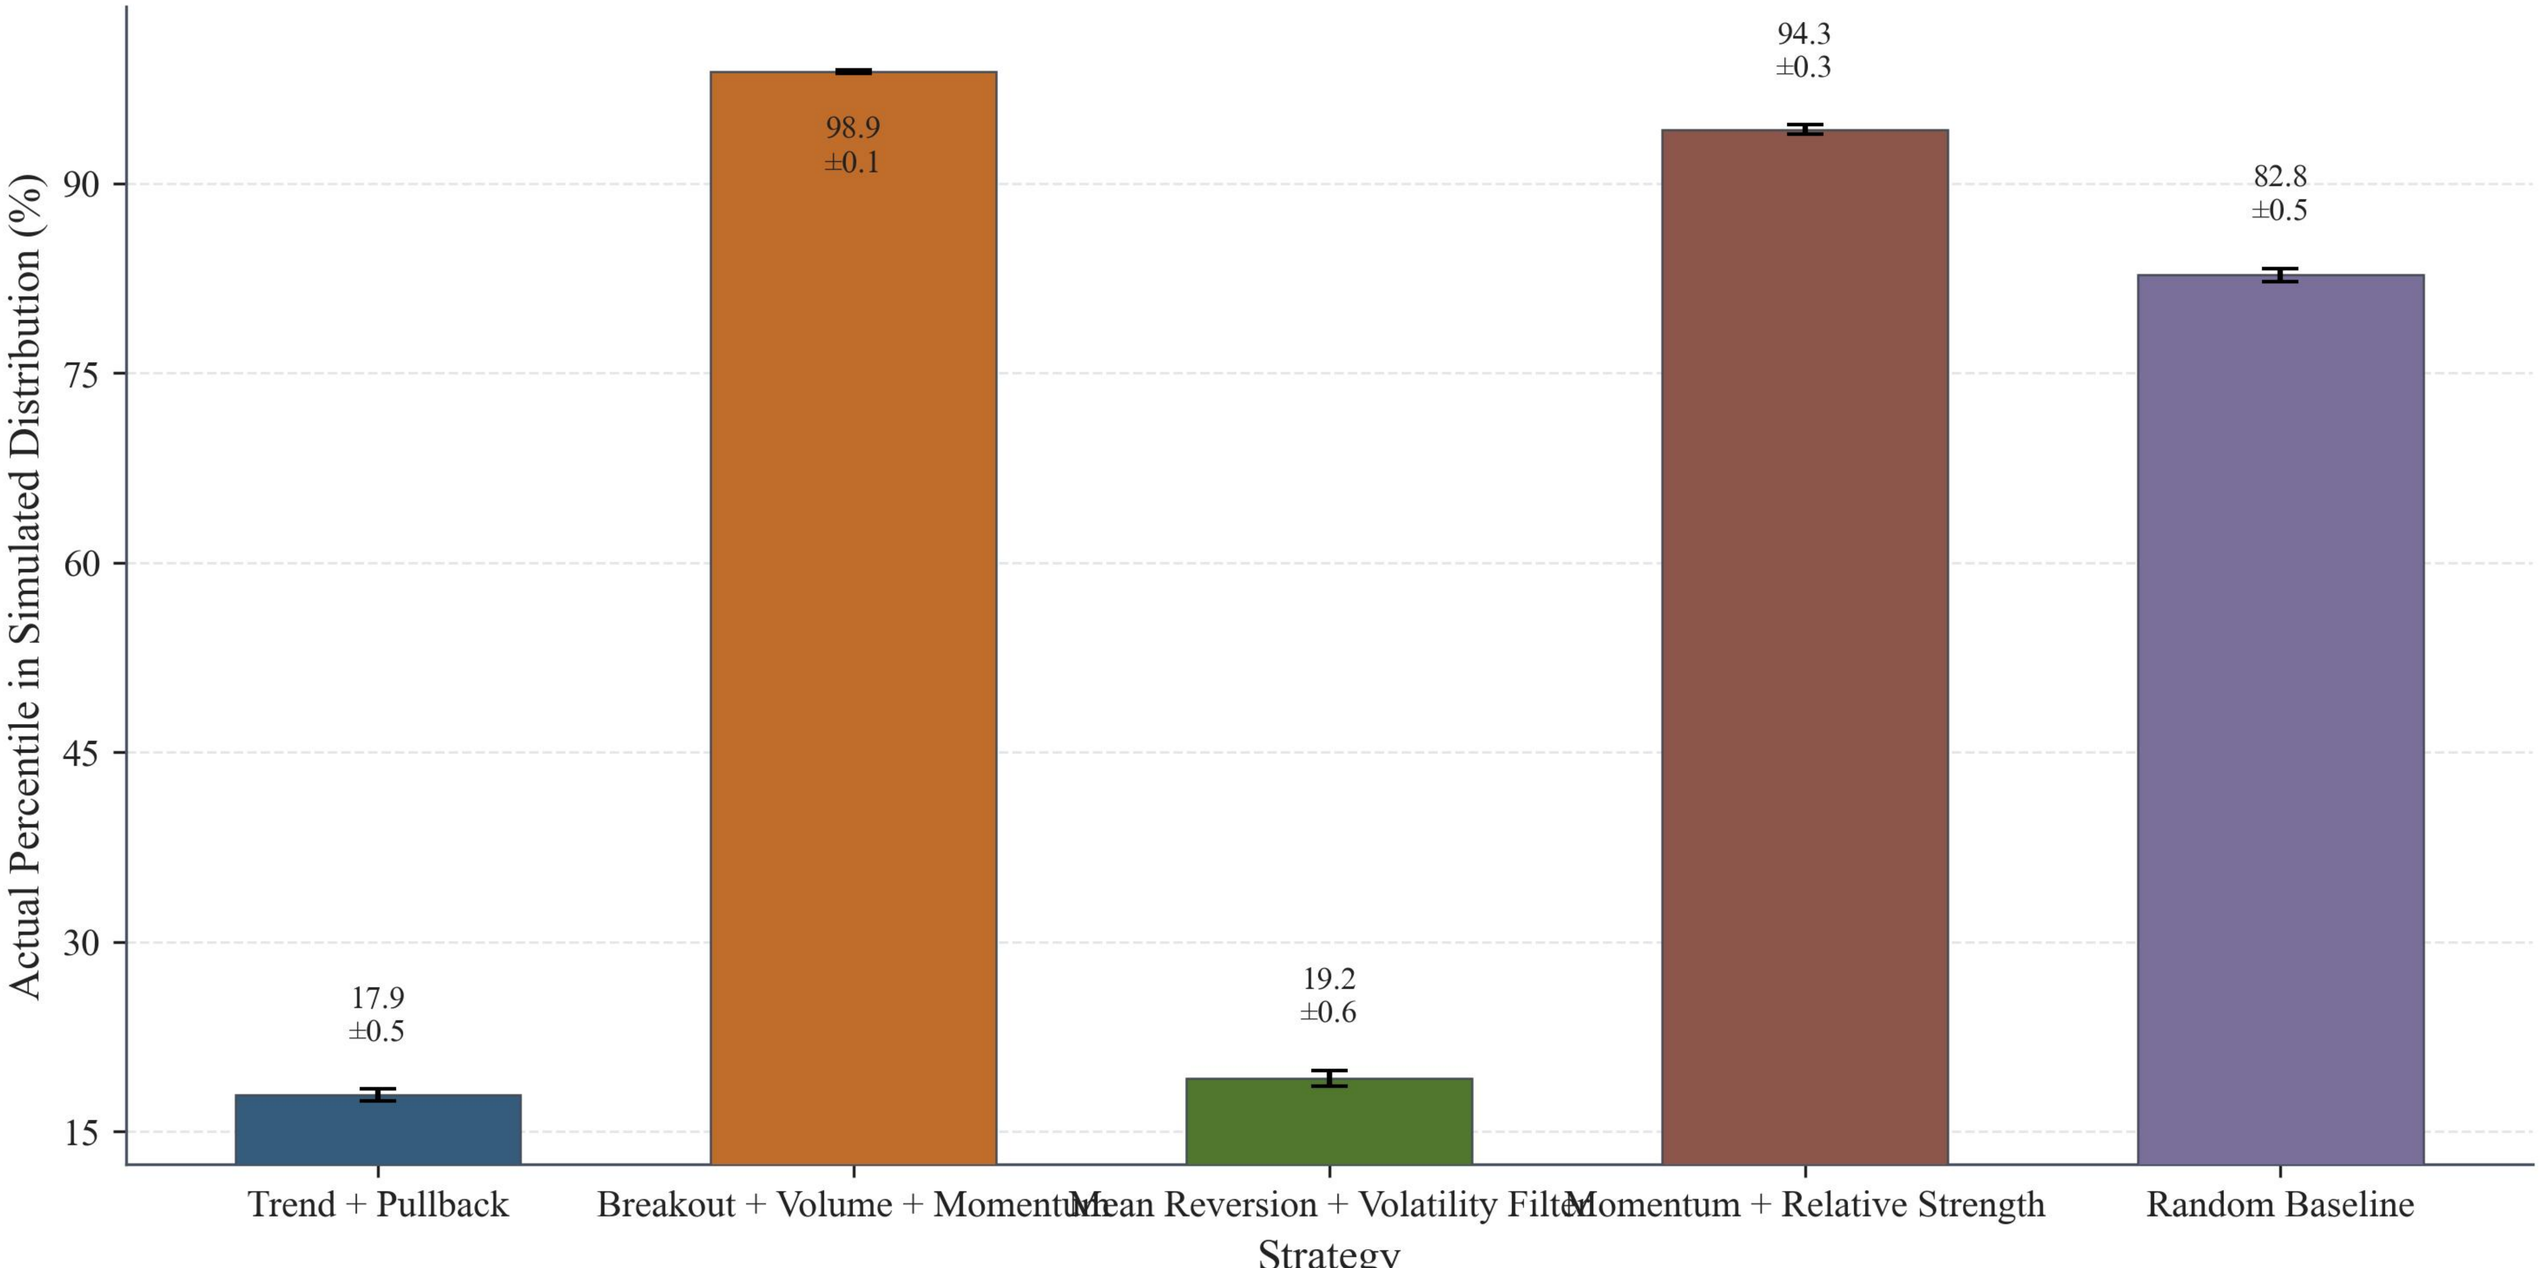


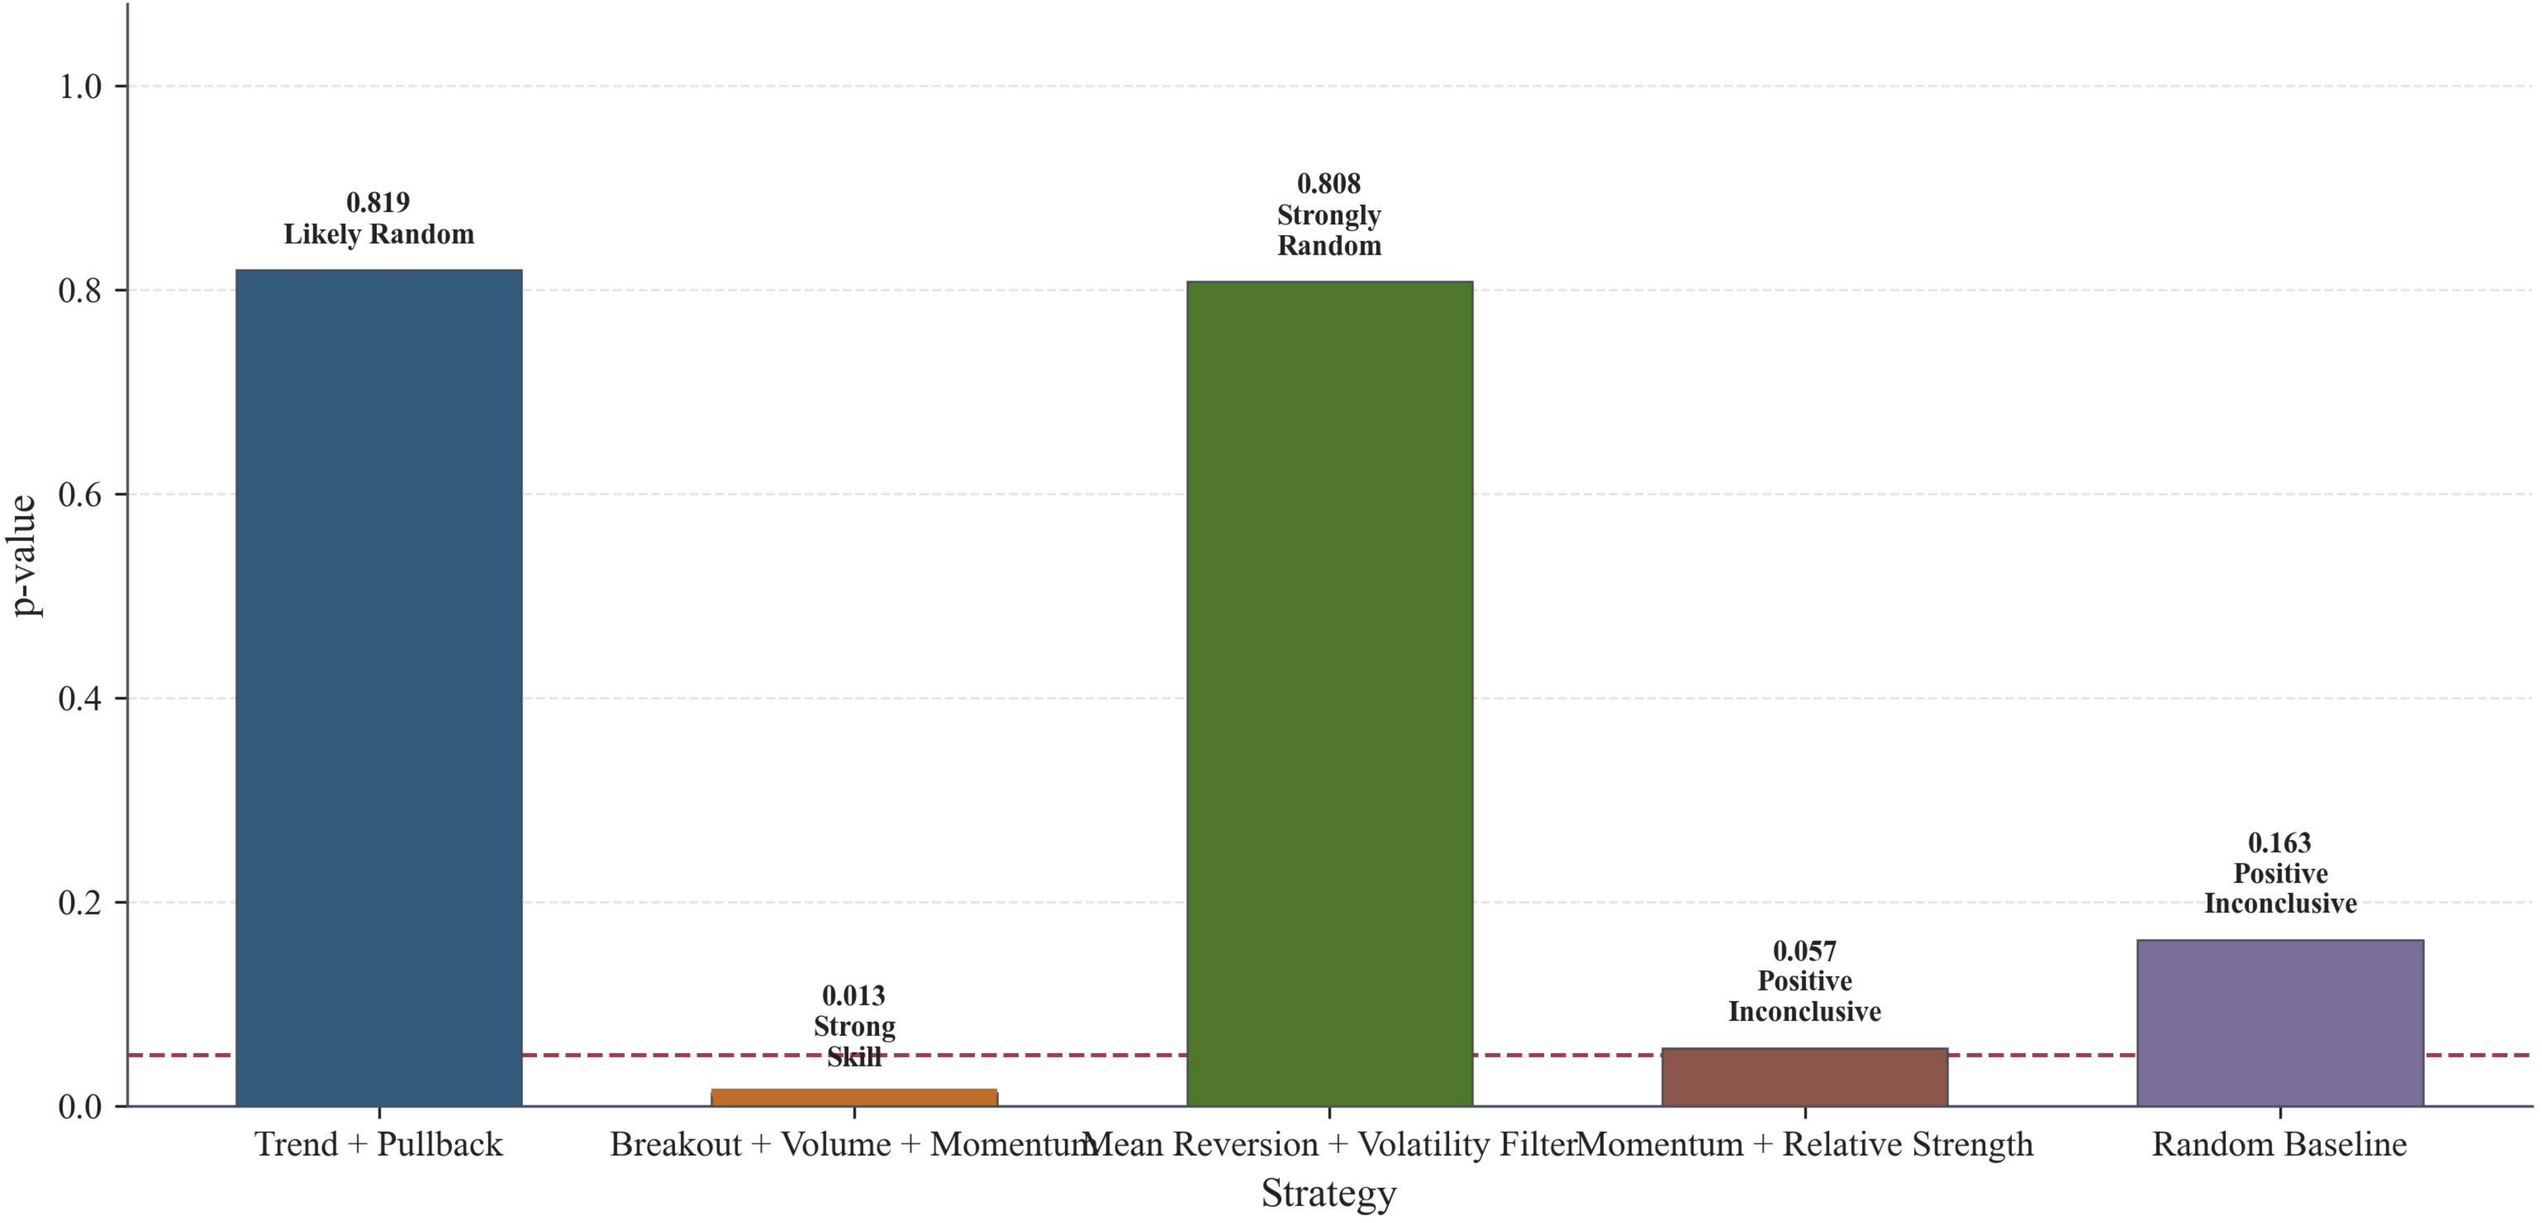
BTC-USD: Monte Carlo Robustness of RCSI Across Seeds



BTC-USD: Monte Carlo Robustness of Actual Percentile Across Seeds

Higher values place the observed outcome deeper into the right tail of the simulated distribution.



BTC-USD: Monte Carlo p-Value by Strategy


The dashed line marks p = 0.05. Lower values indicate stronger evidence against the simulated-random baseline. Labels show the overall evidence class.
