AAPL: Strategy Evidence and Confidence Overview

Evidence labels are based on p-value, RCSI, robustness, and stability.

Strategy	Evidence	Verdict	Confidence	p-value	RCSI	Stability
Trend	Likely Random	Luck	Moderate	1.000	-157.779	Stable
Mean Reversion	Likely Random	Luck	Moderate	1.000	-6.382	Stable
Random	Likely Random	Luck	Moderate	0.971	-52.154	Stable
Momentum	Likely Random	Luck	Moderate	1.000	-268.423	Stable
Breakout	Likely Random	Luck	Moderate	0.657	-81.411	Stable

Interpretation:
Strong Skill / Skill = positive evidence that survives the random baseline.
Positive or Null-Like inconclusive labels = the signal is not strong enough for a firm claim.
Likely Random / Strongly Random = the observed result remains consistent with randomness.

Likely Random
Positive RCSI indicates performance above the simulated baseline (skill).
Negative RCSI suggests performance consistent with or below randomness.
Labels show the overall evidence class, not RCSI alone.

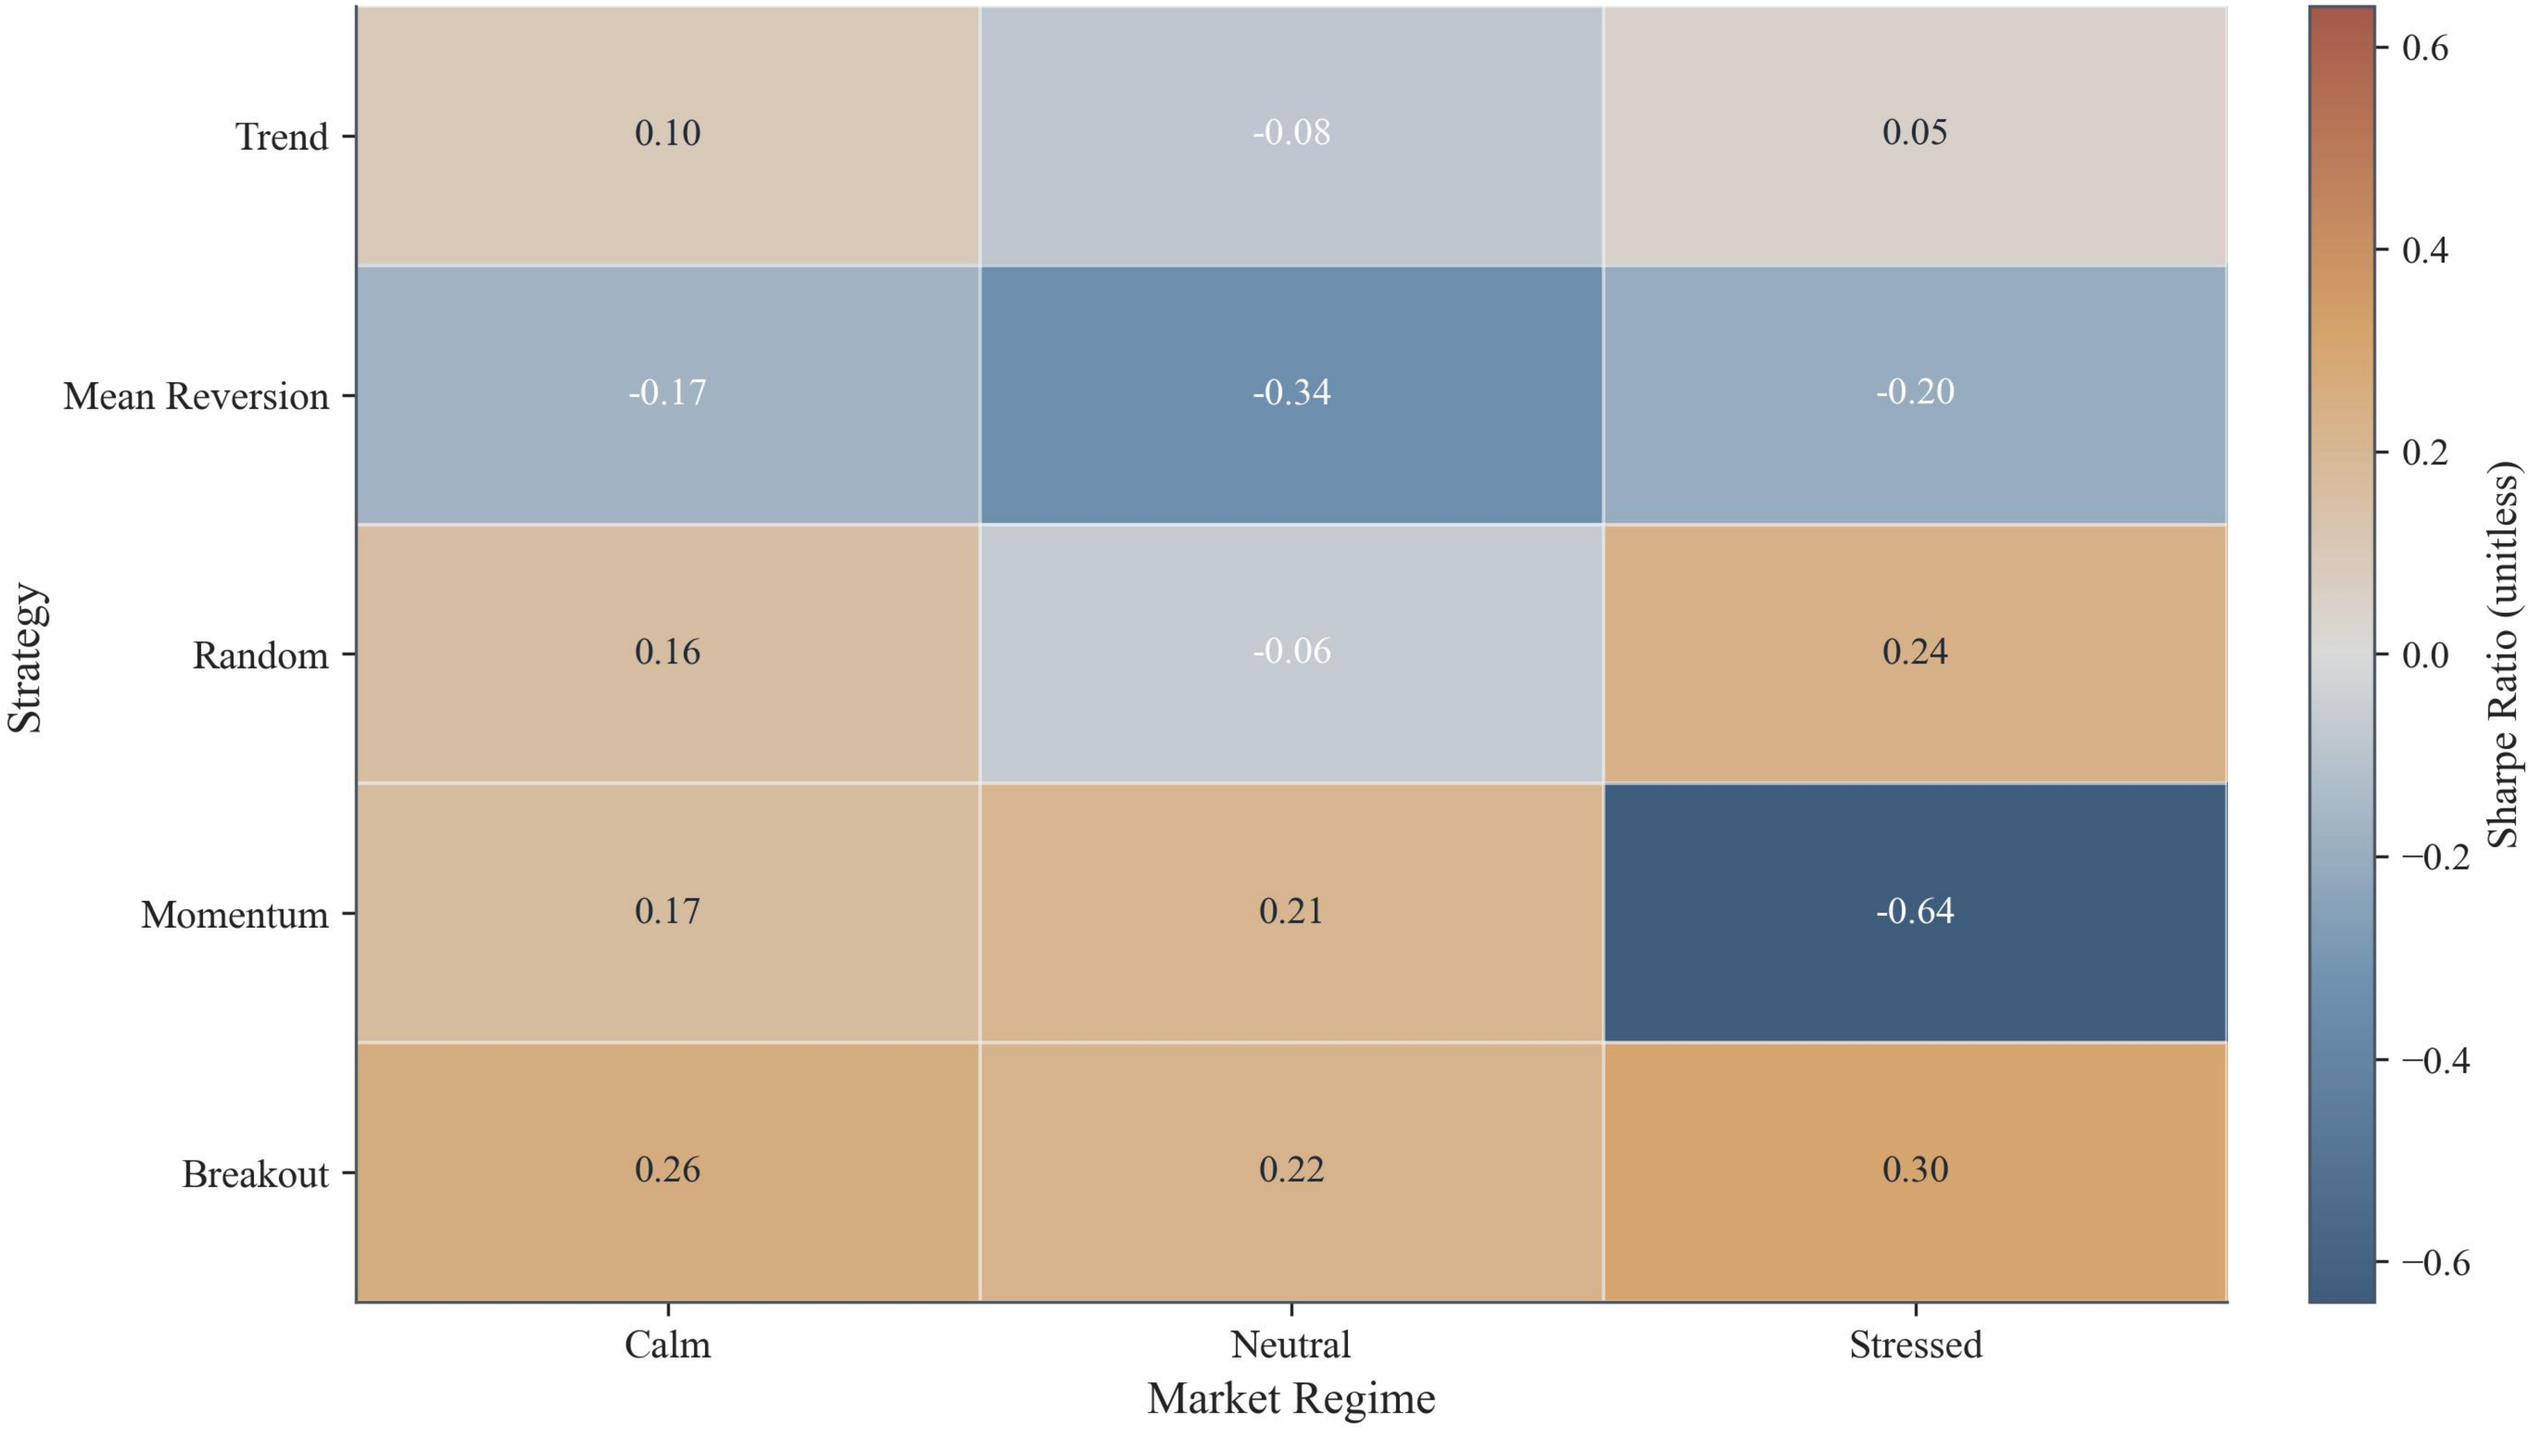
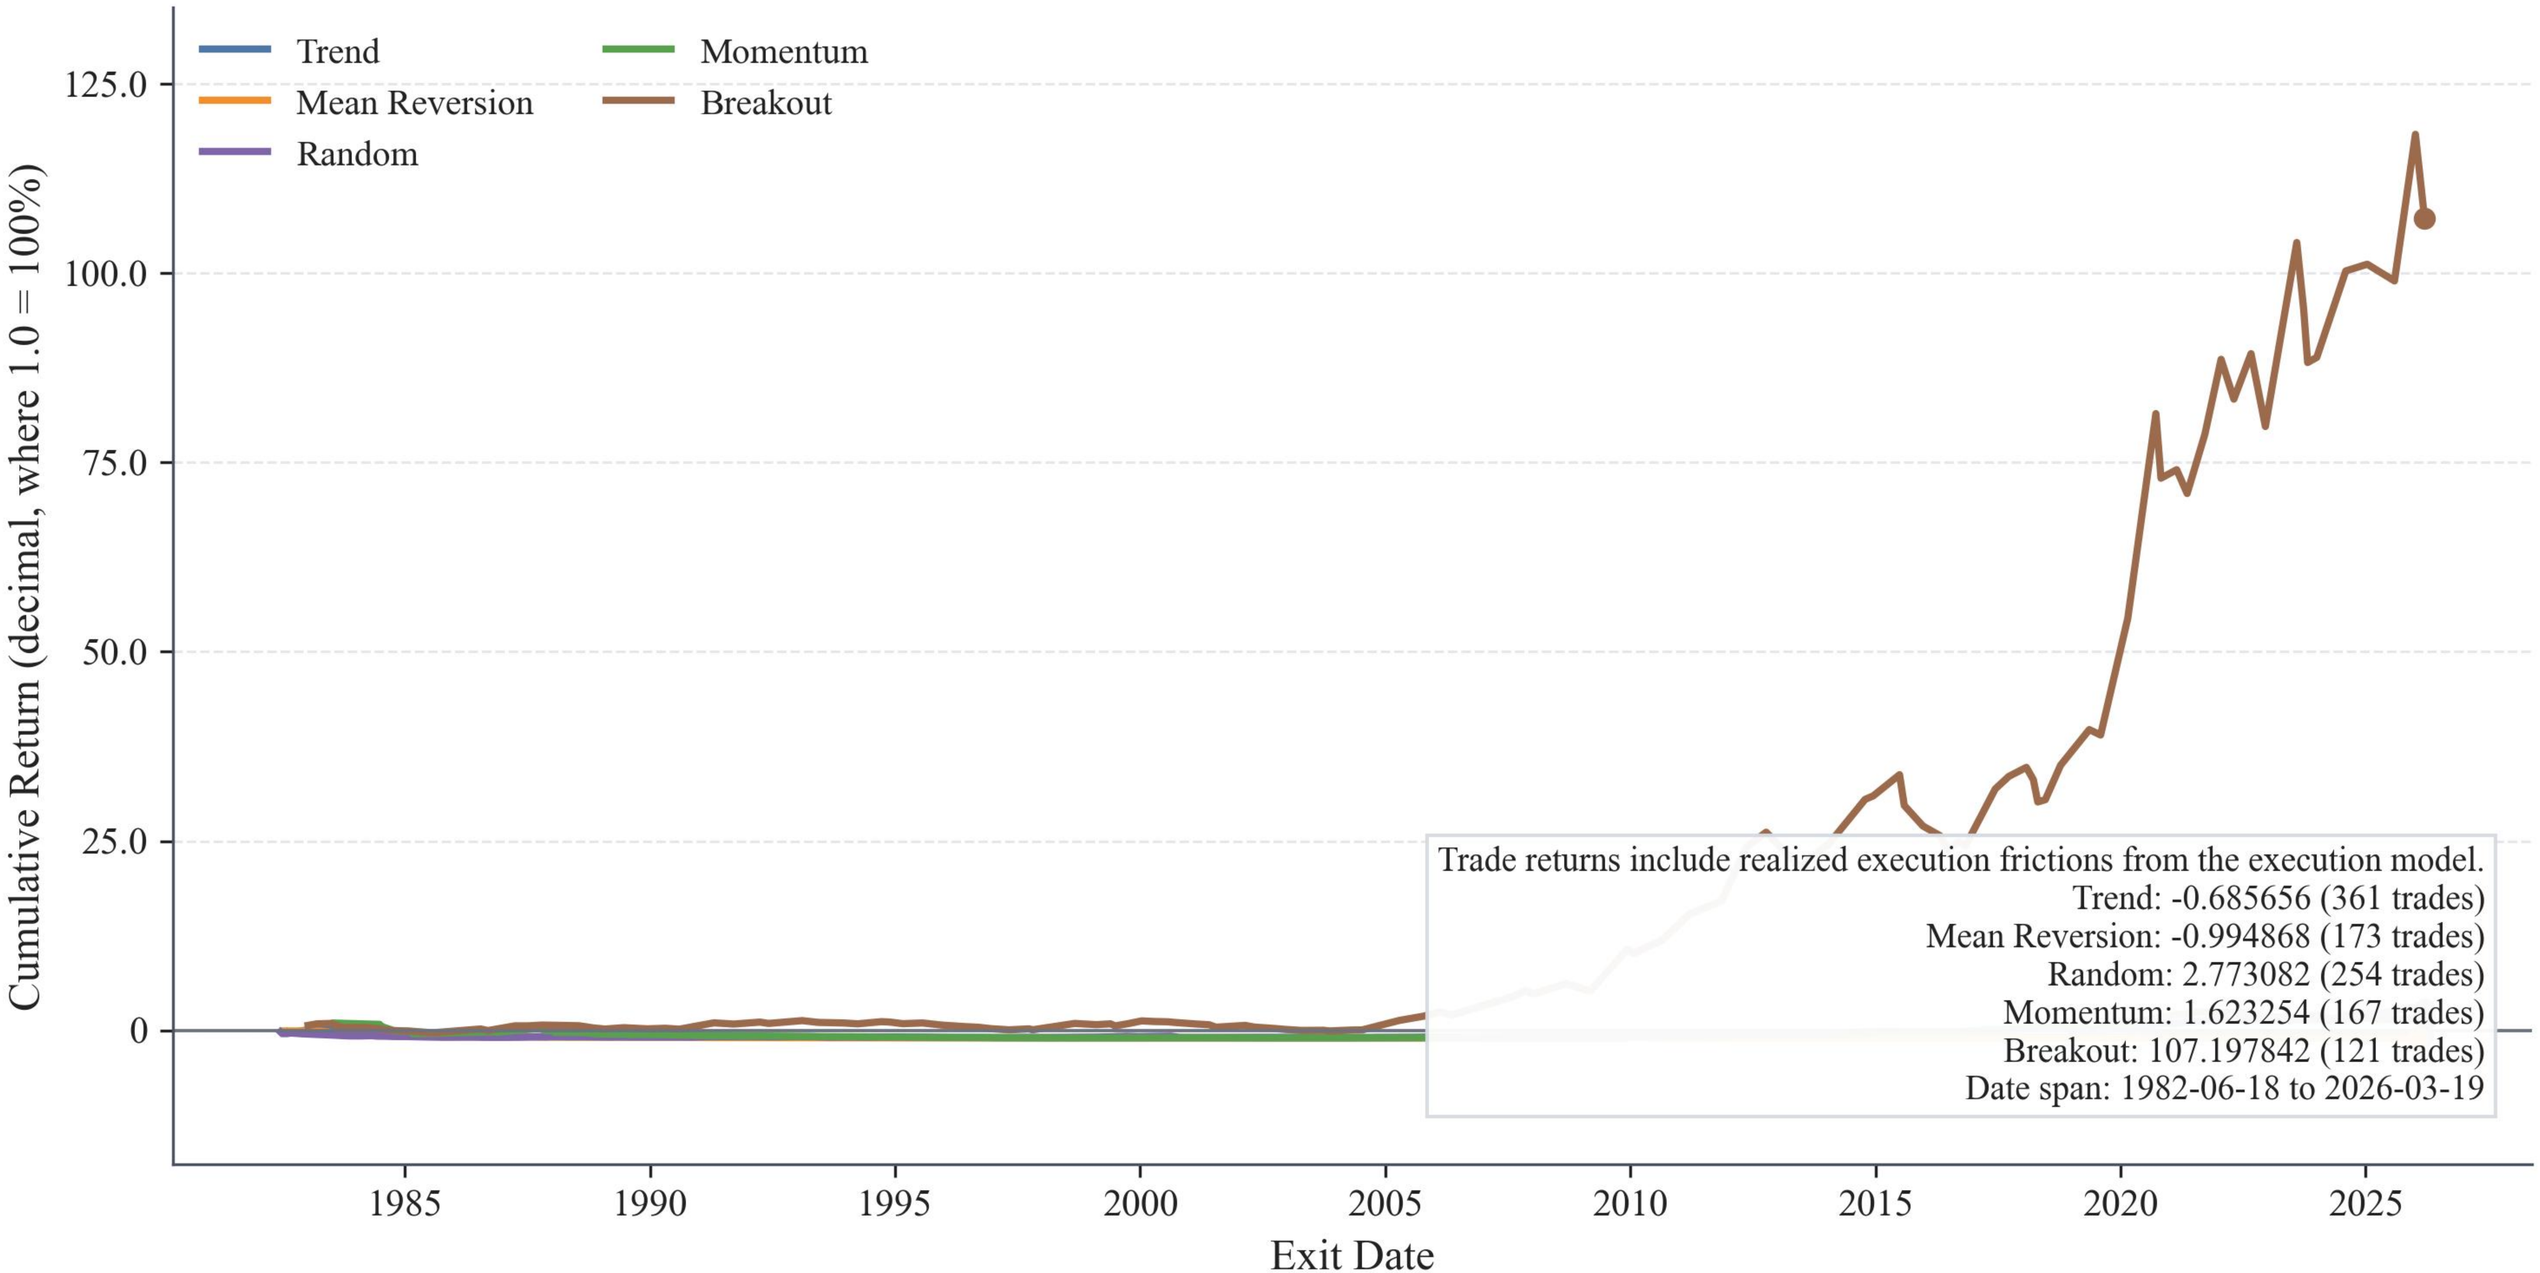
AAPL: Strategy Performance Across Market Regimes

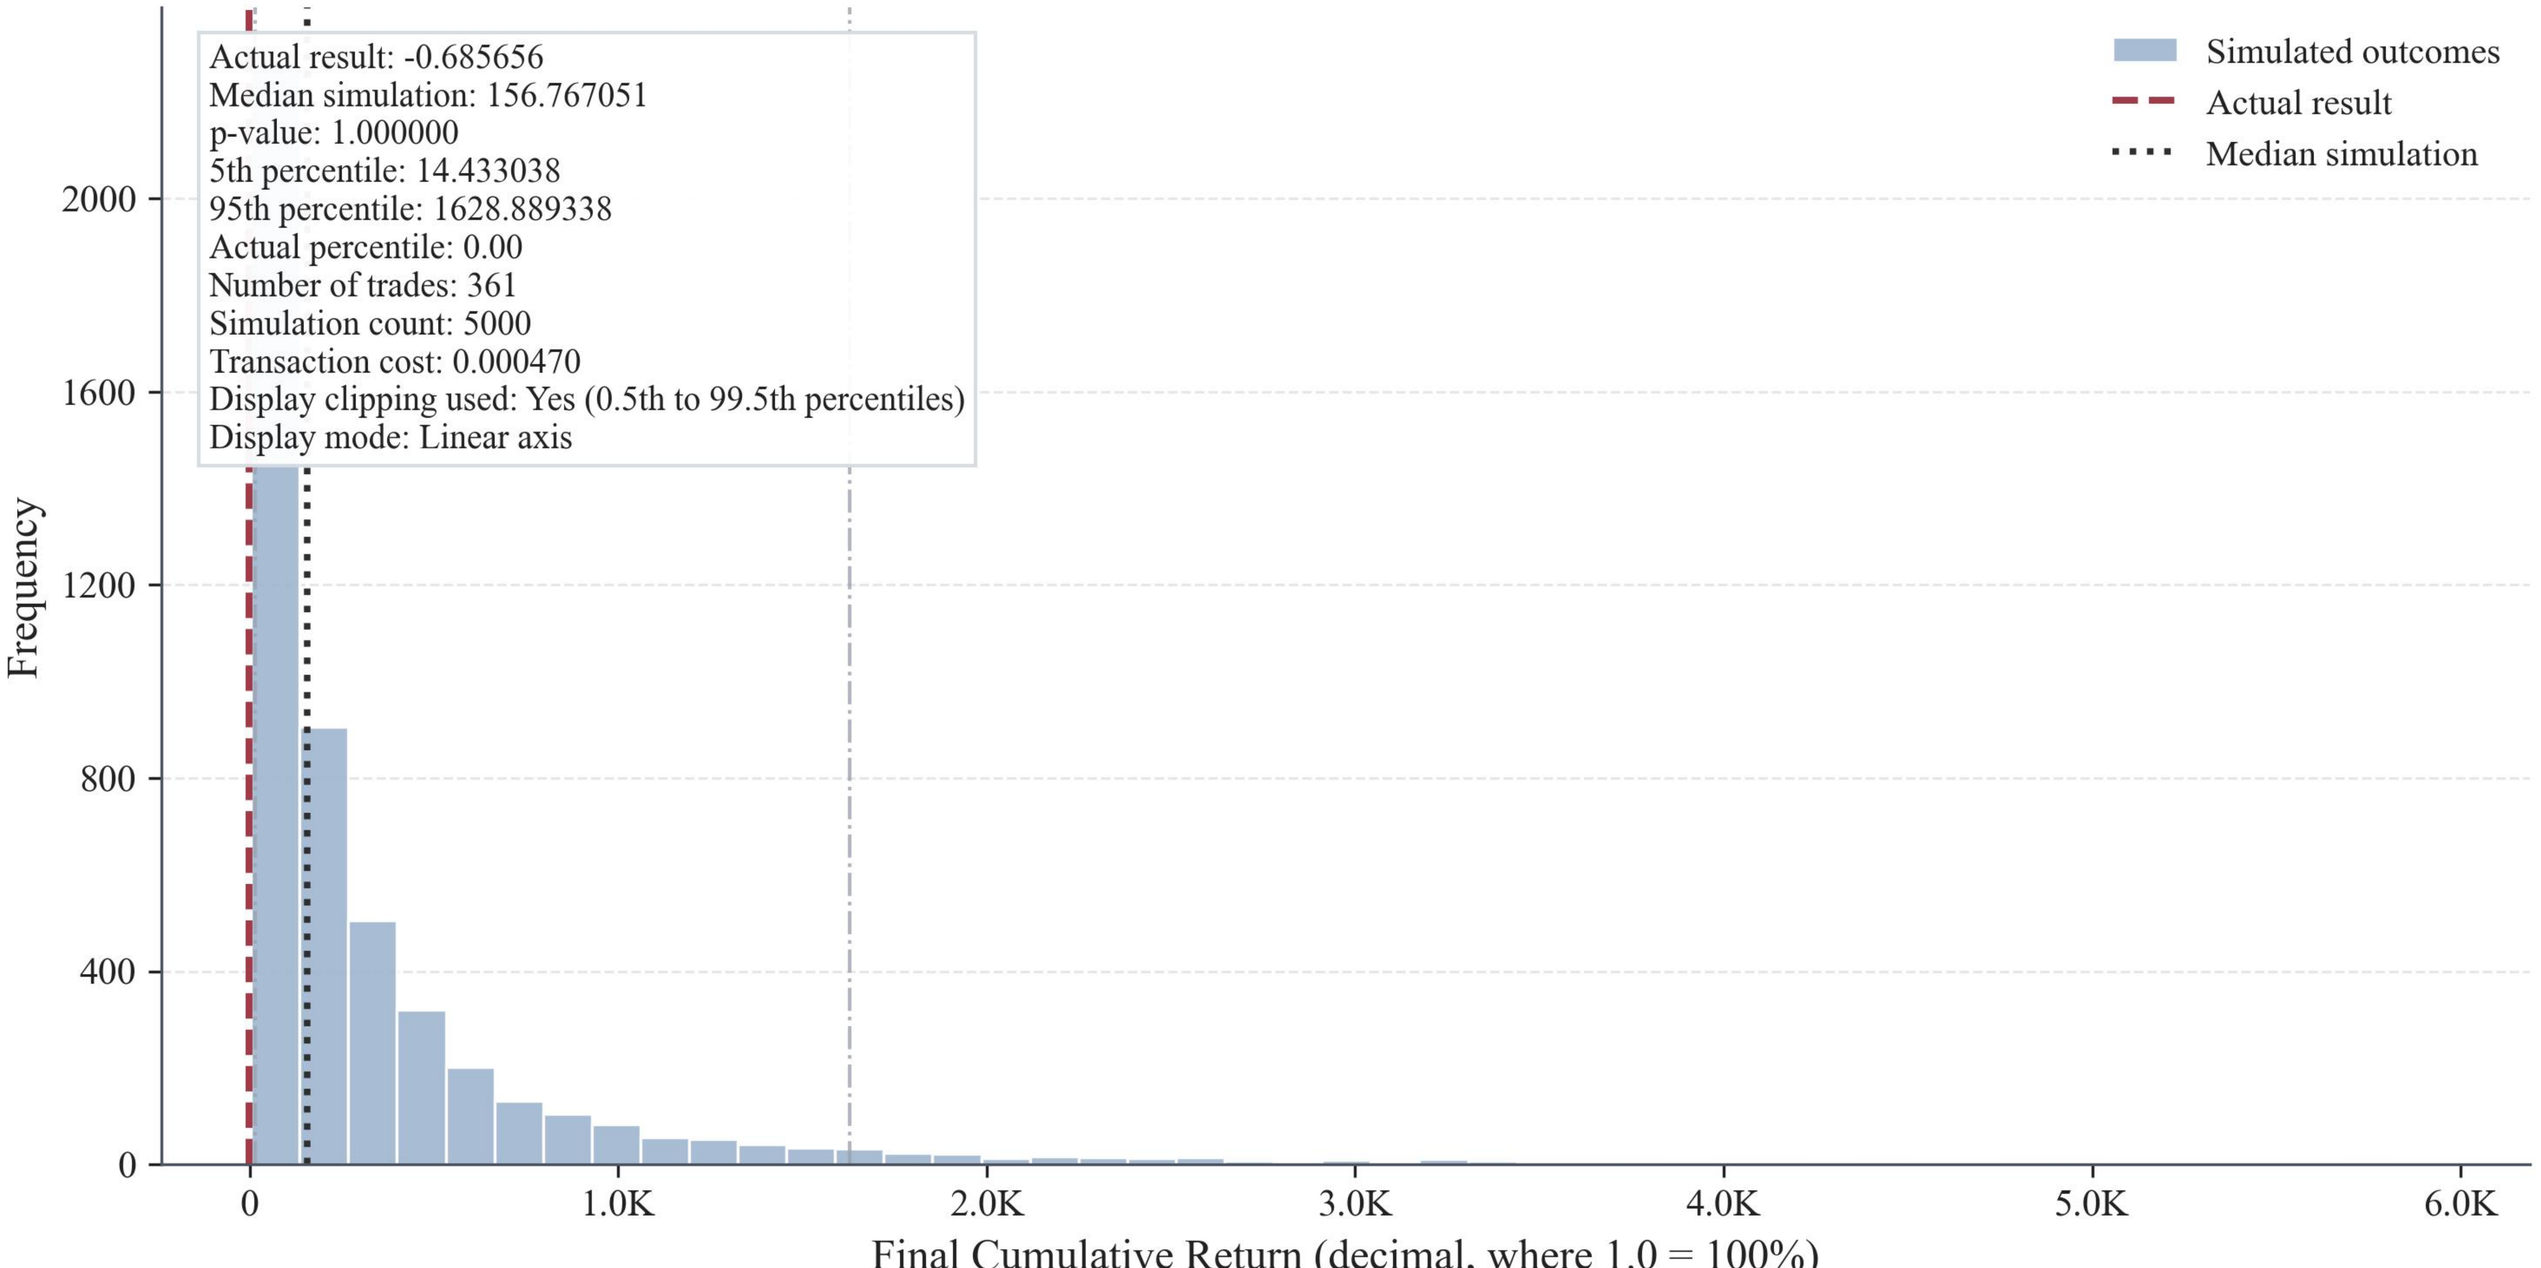
Cell values show Sharpe ratios; warmer colors indicate stronger performance.



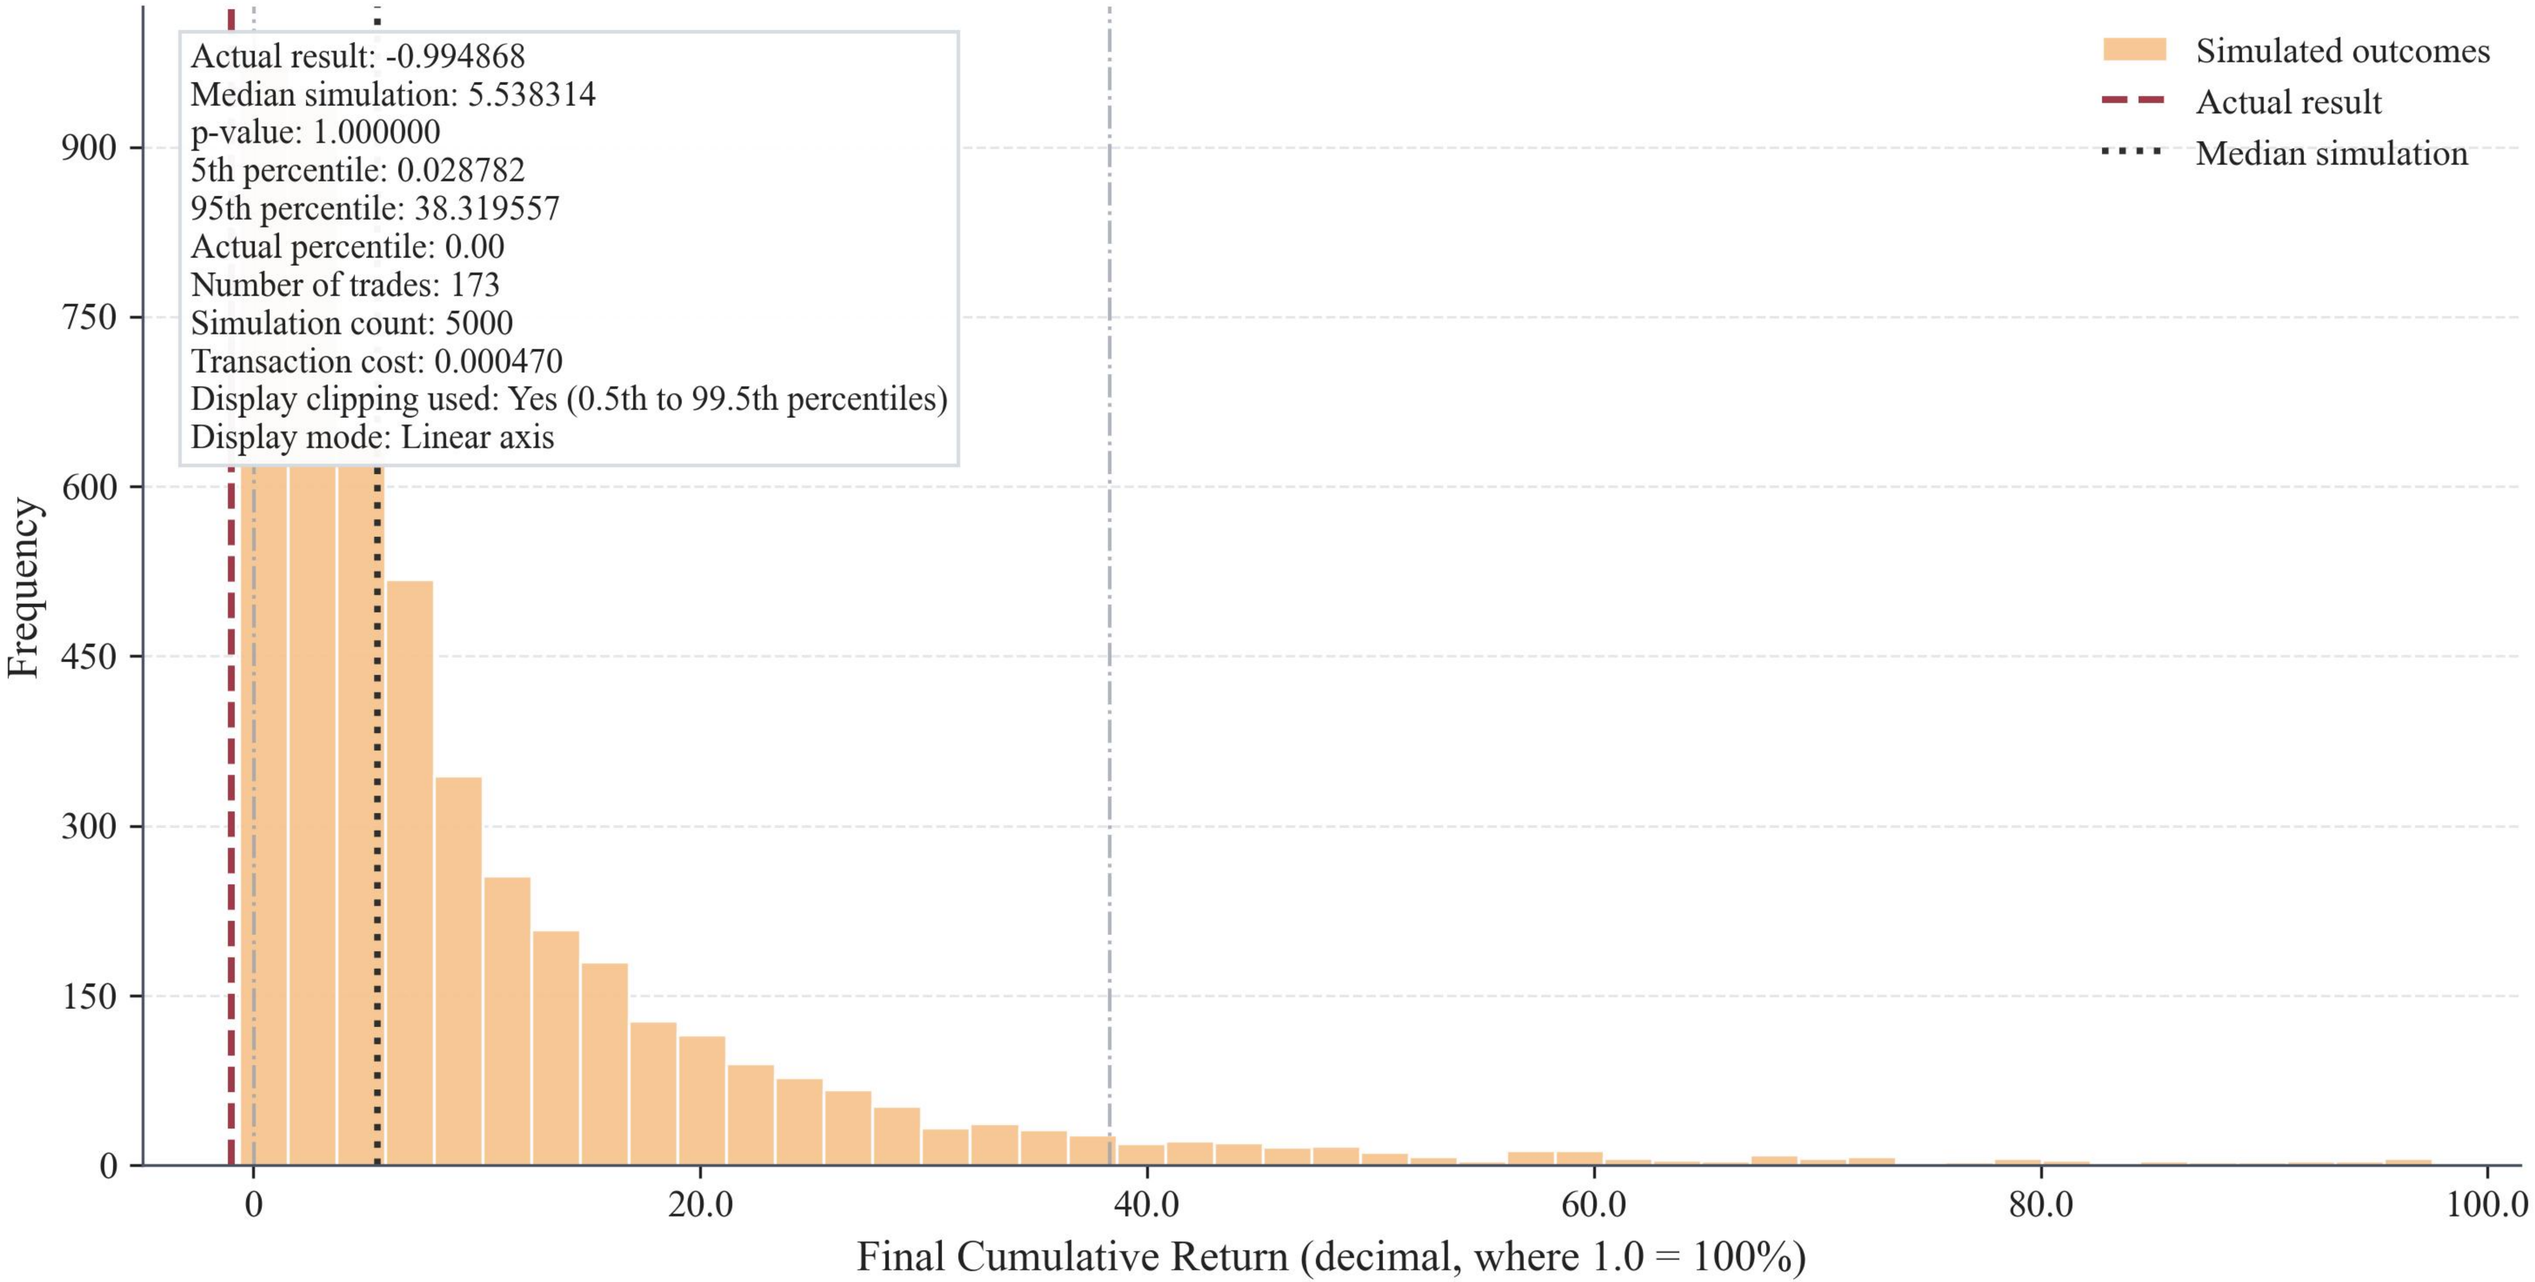
AAPL: Equity Curves by Strategy



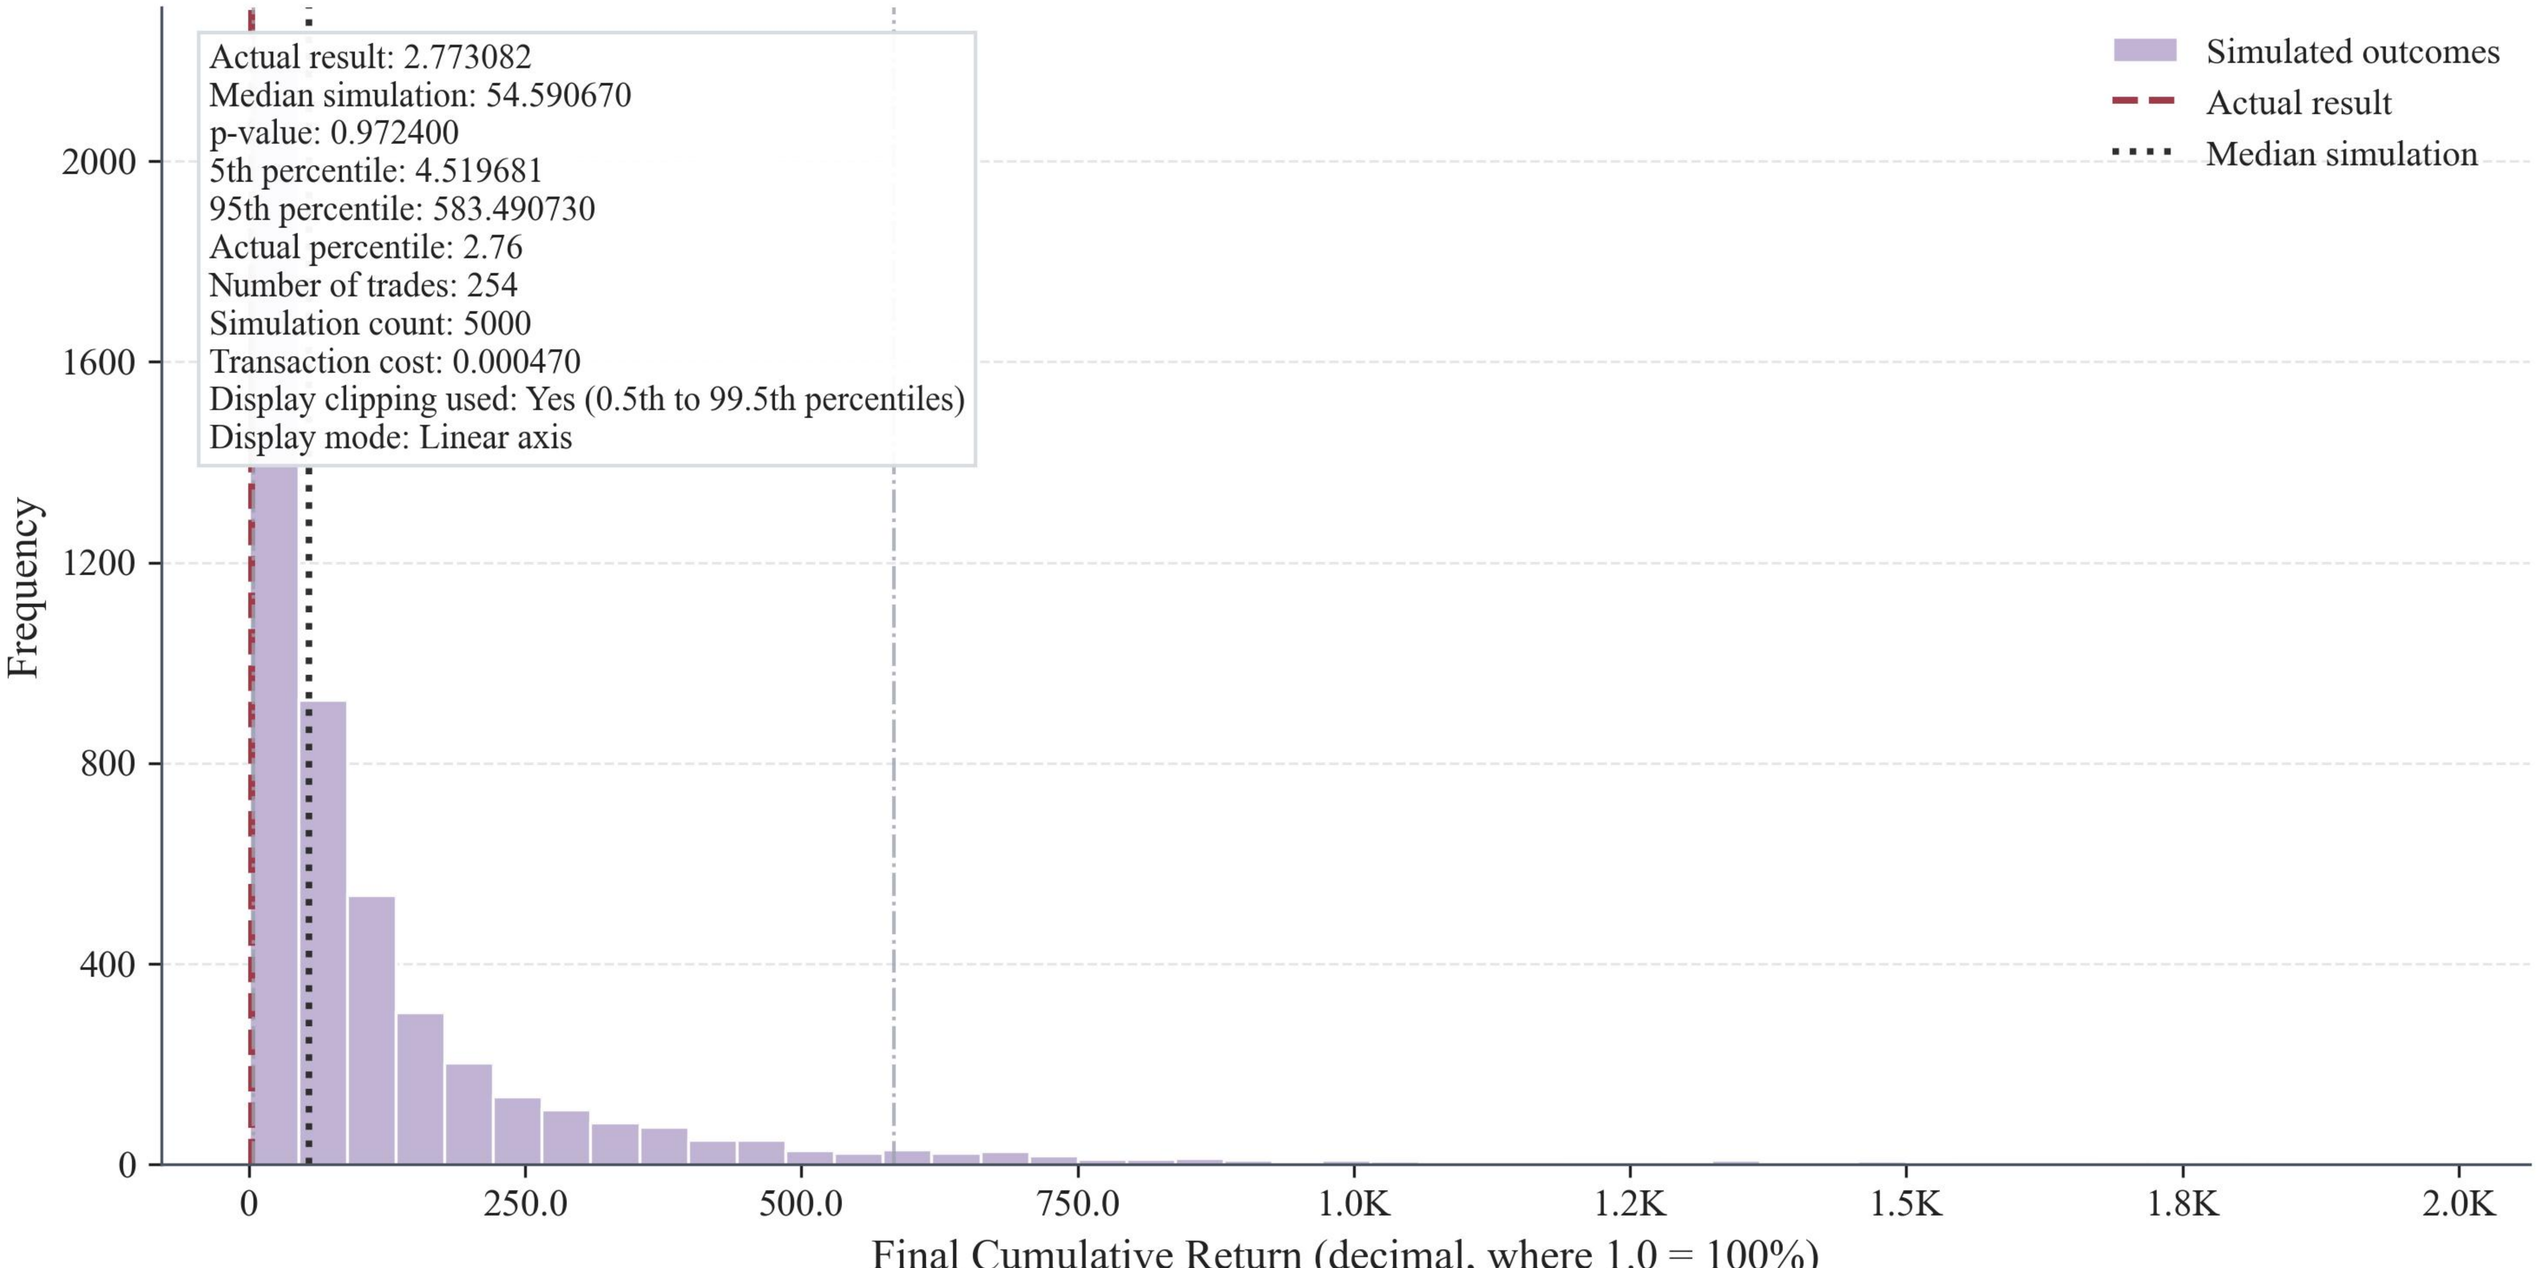
AAPL: Monte Carlo Distribution of Final Returns, Trend Strategy



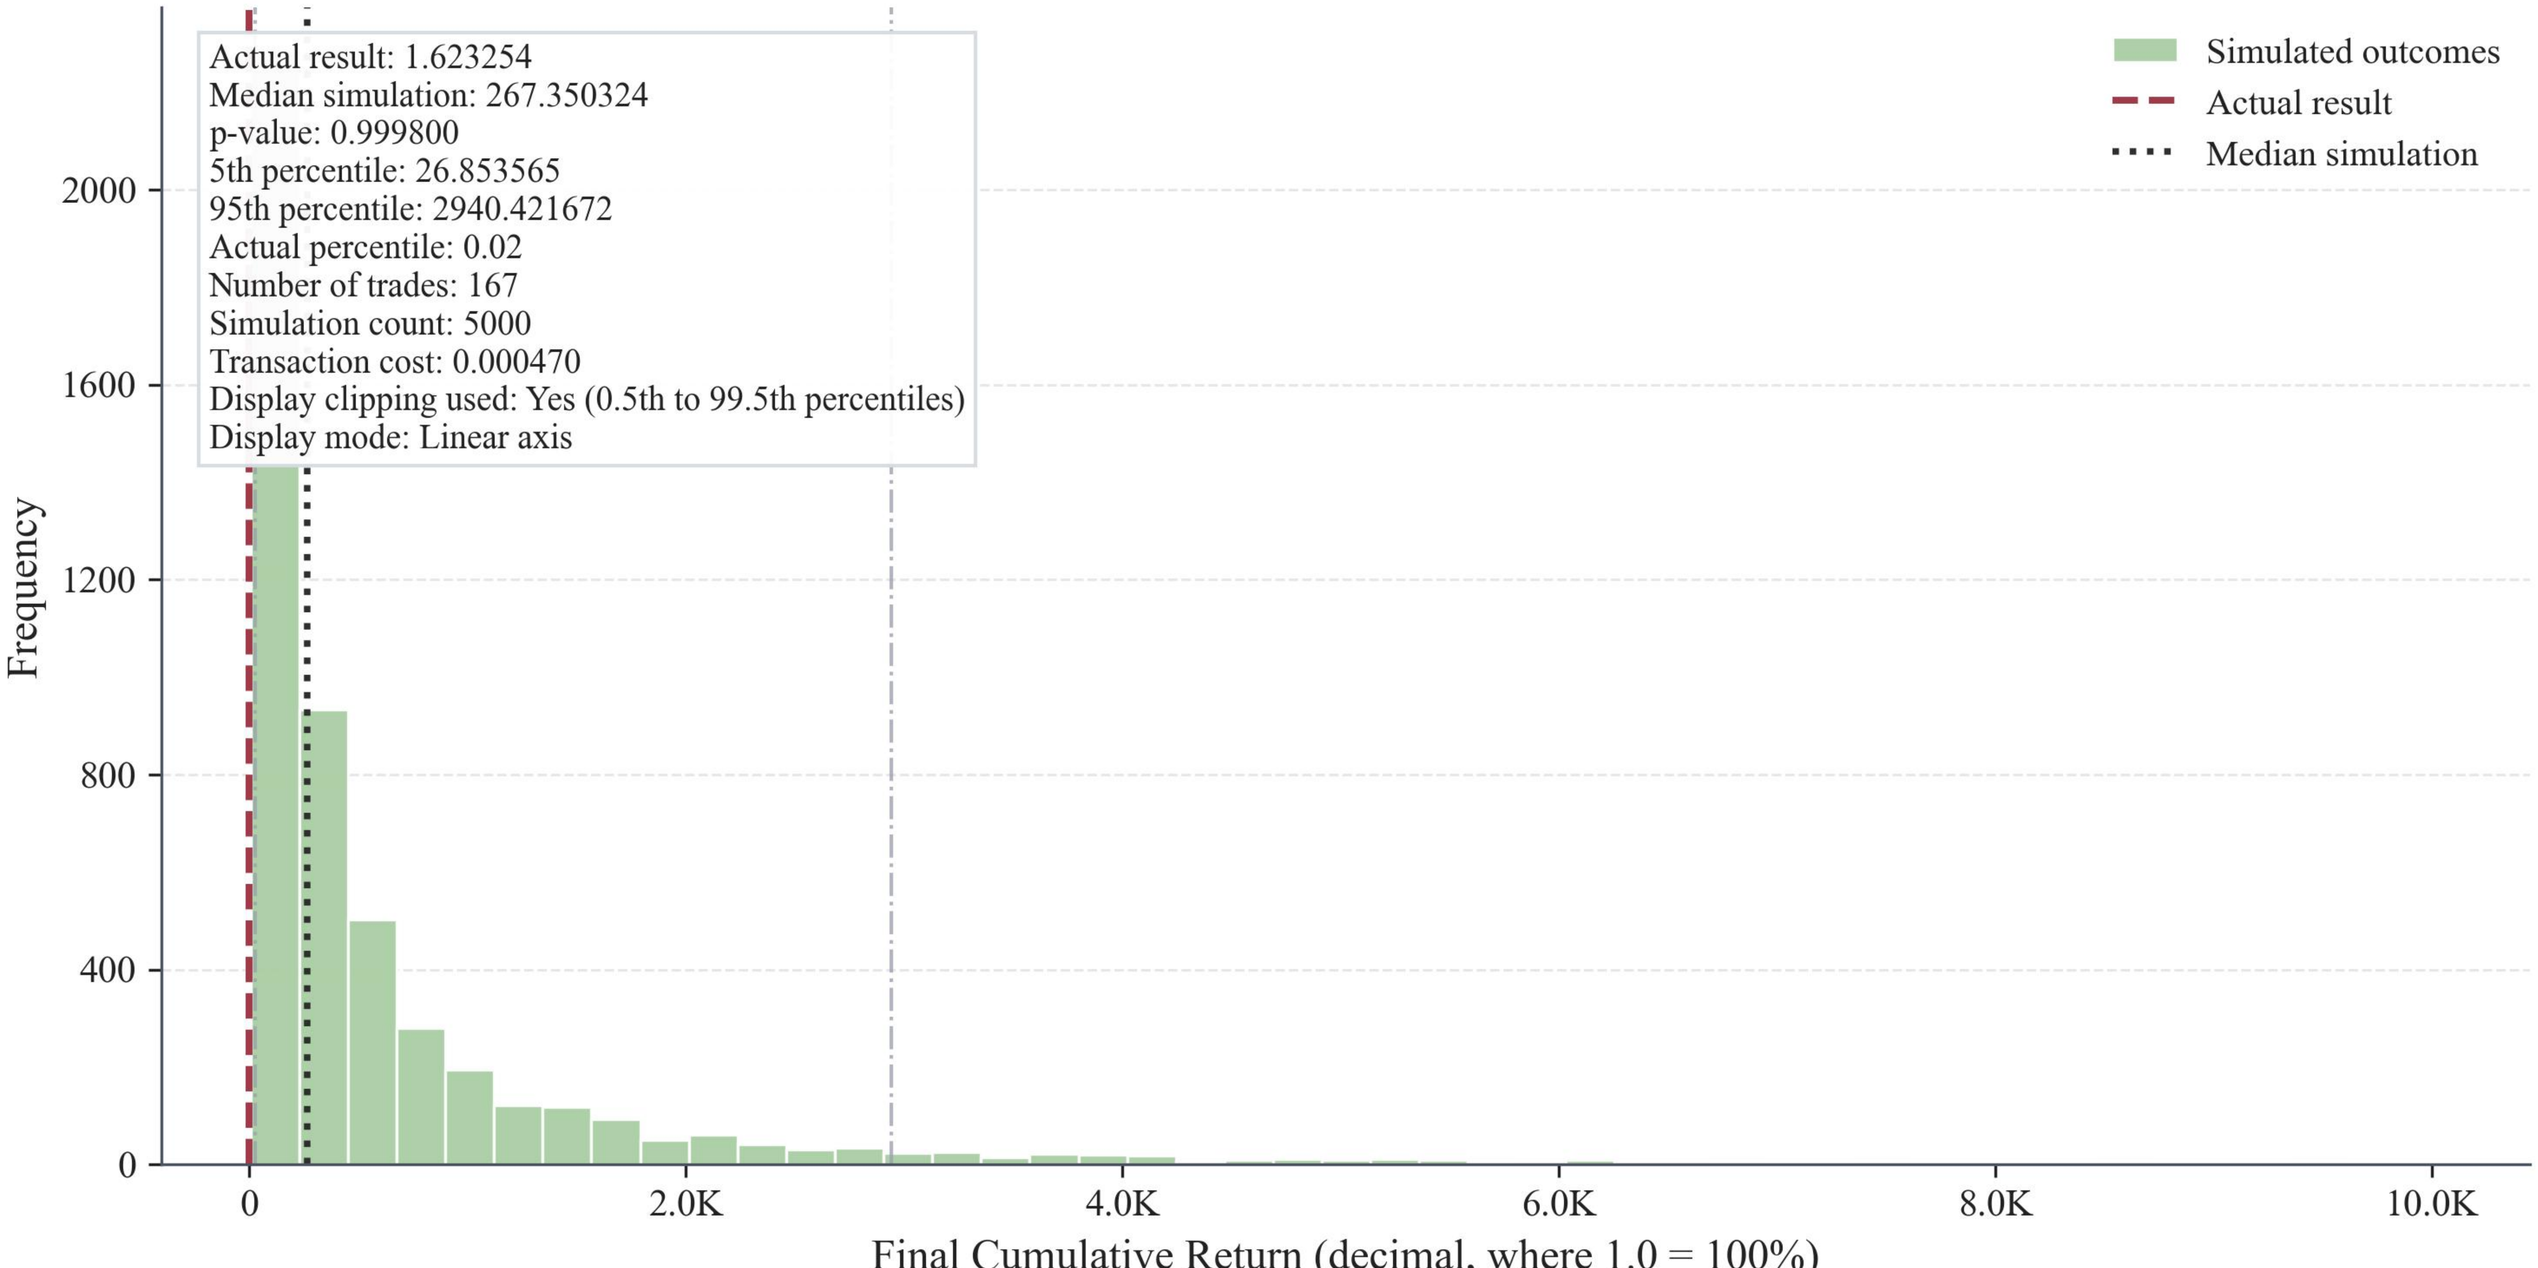
AAPL: Monte Carlo Distribution of Final Returns, Mean Reversion Strategy



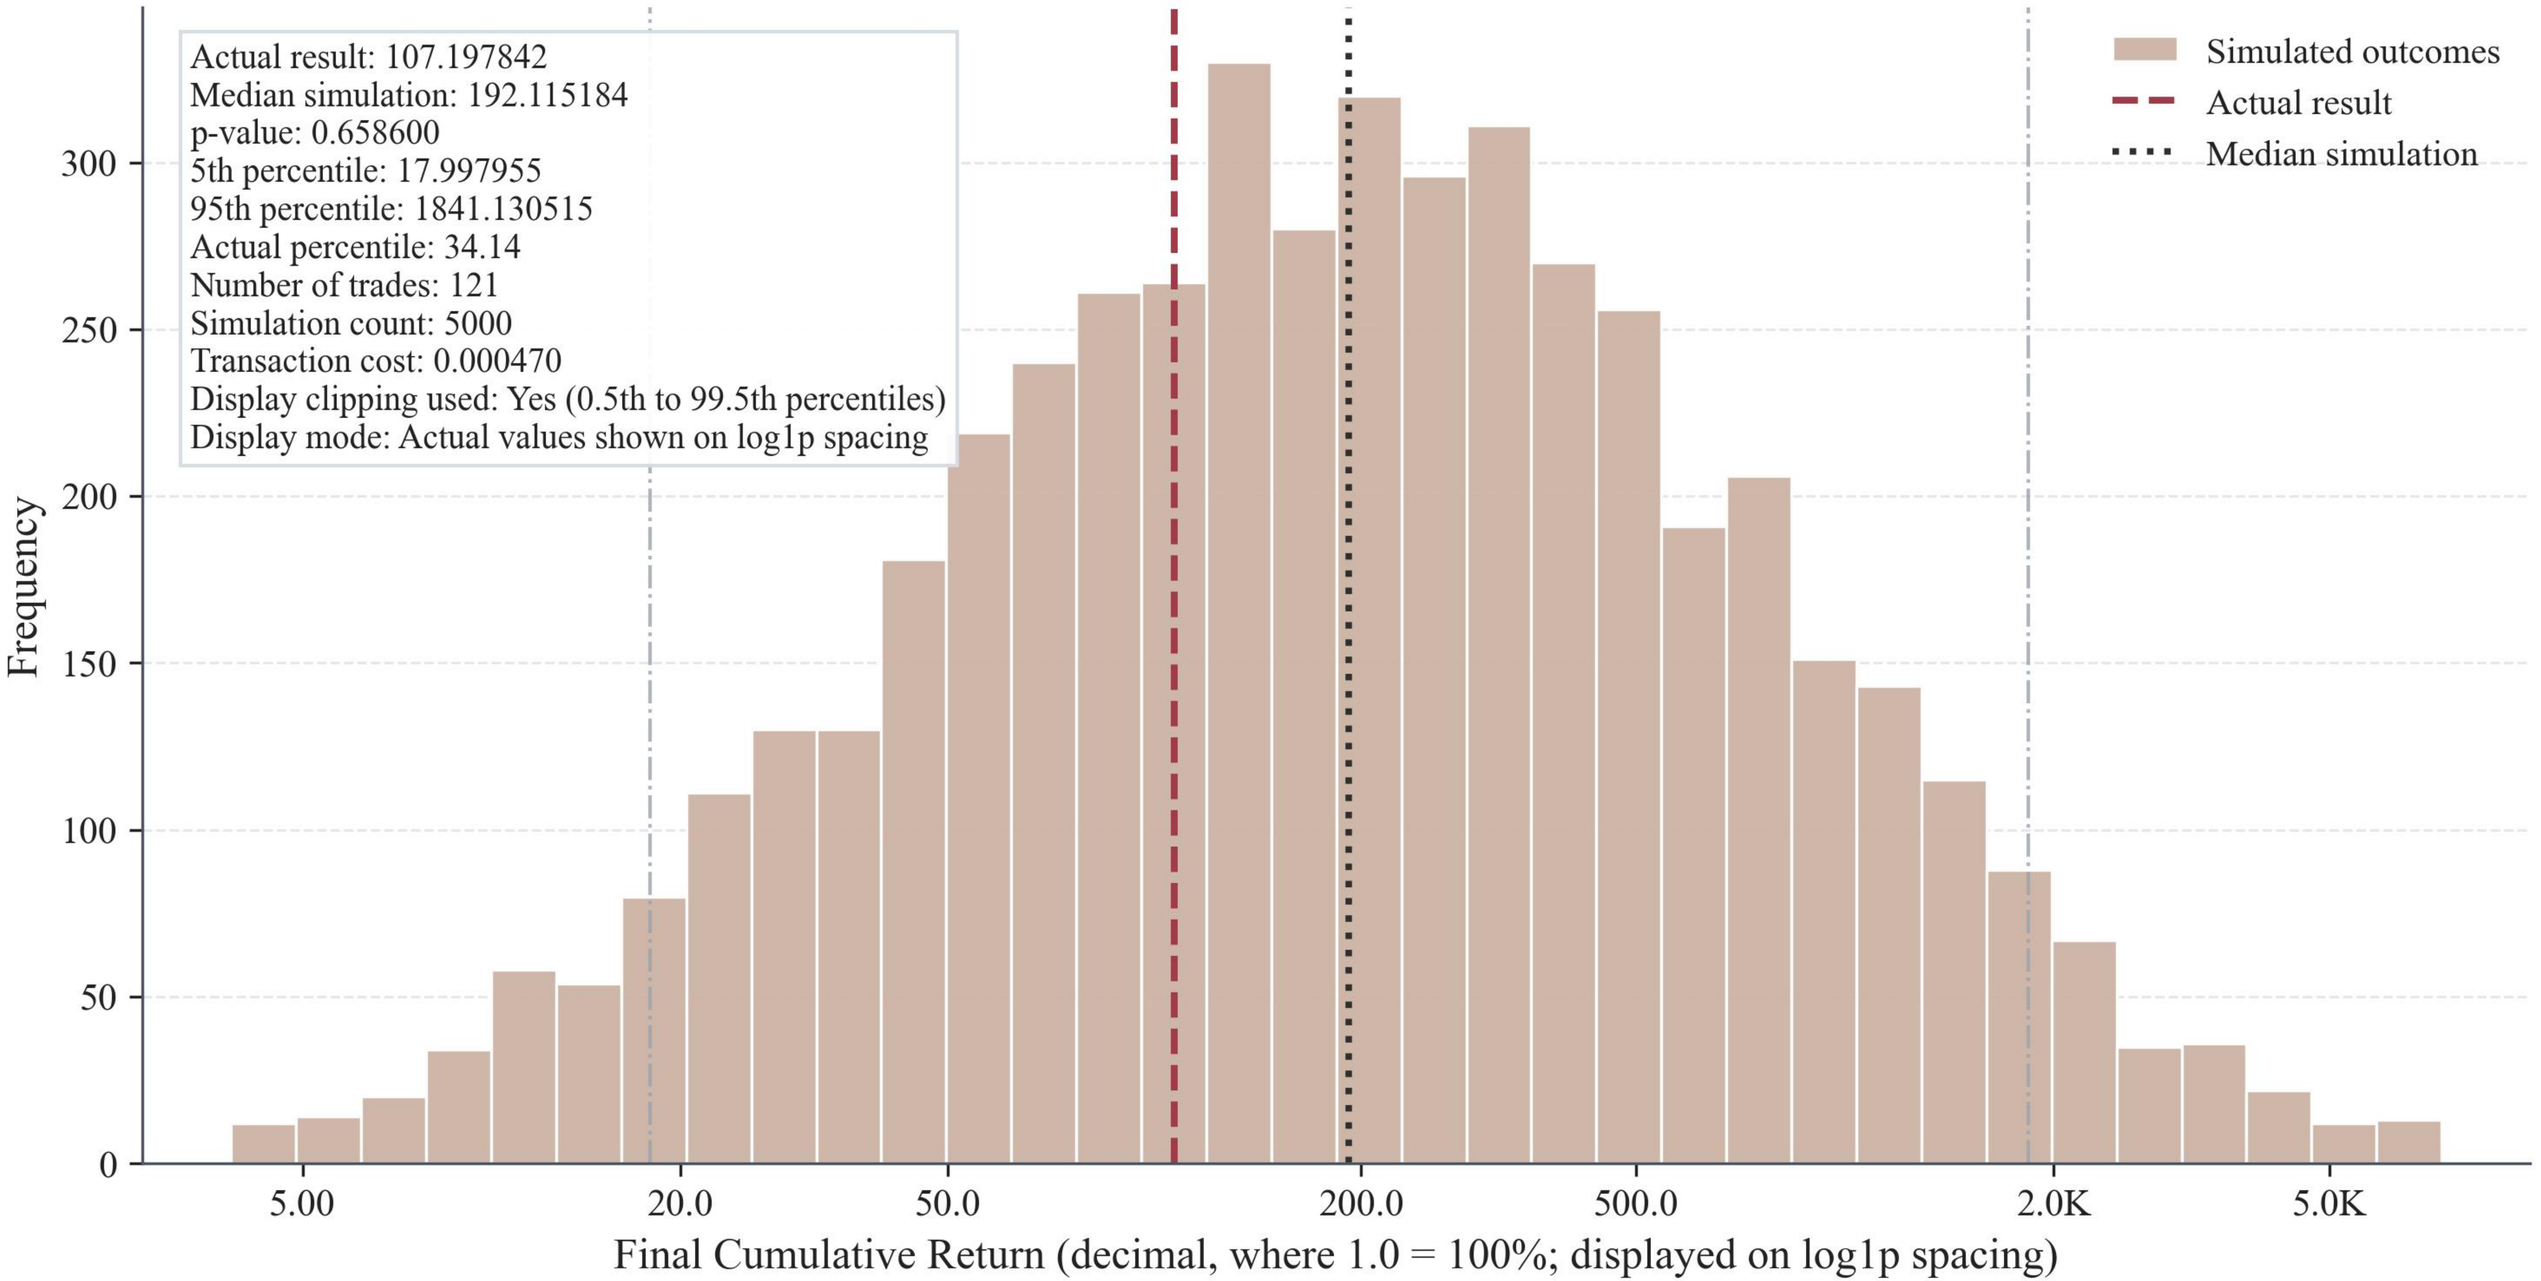
AAPL: Monte Carlo Distribution of Final Returns, Random Strategy



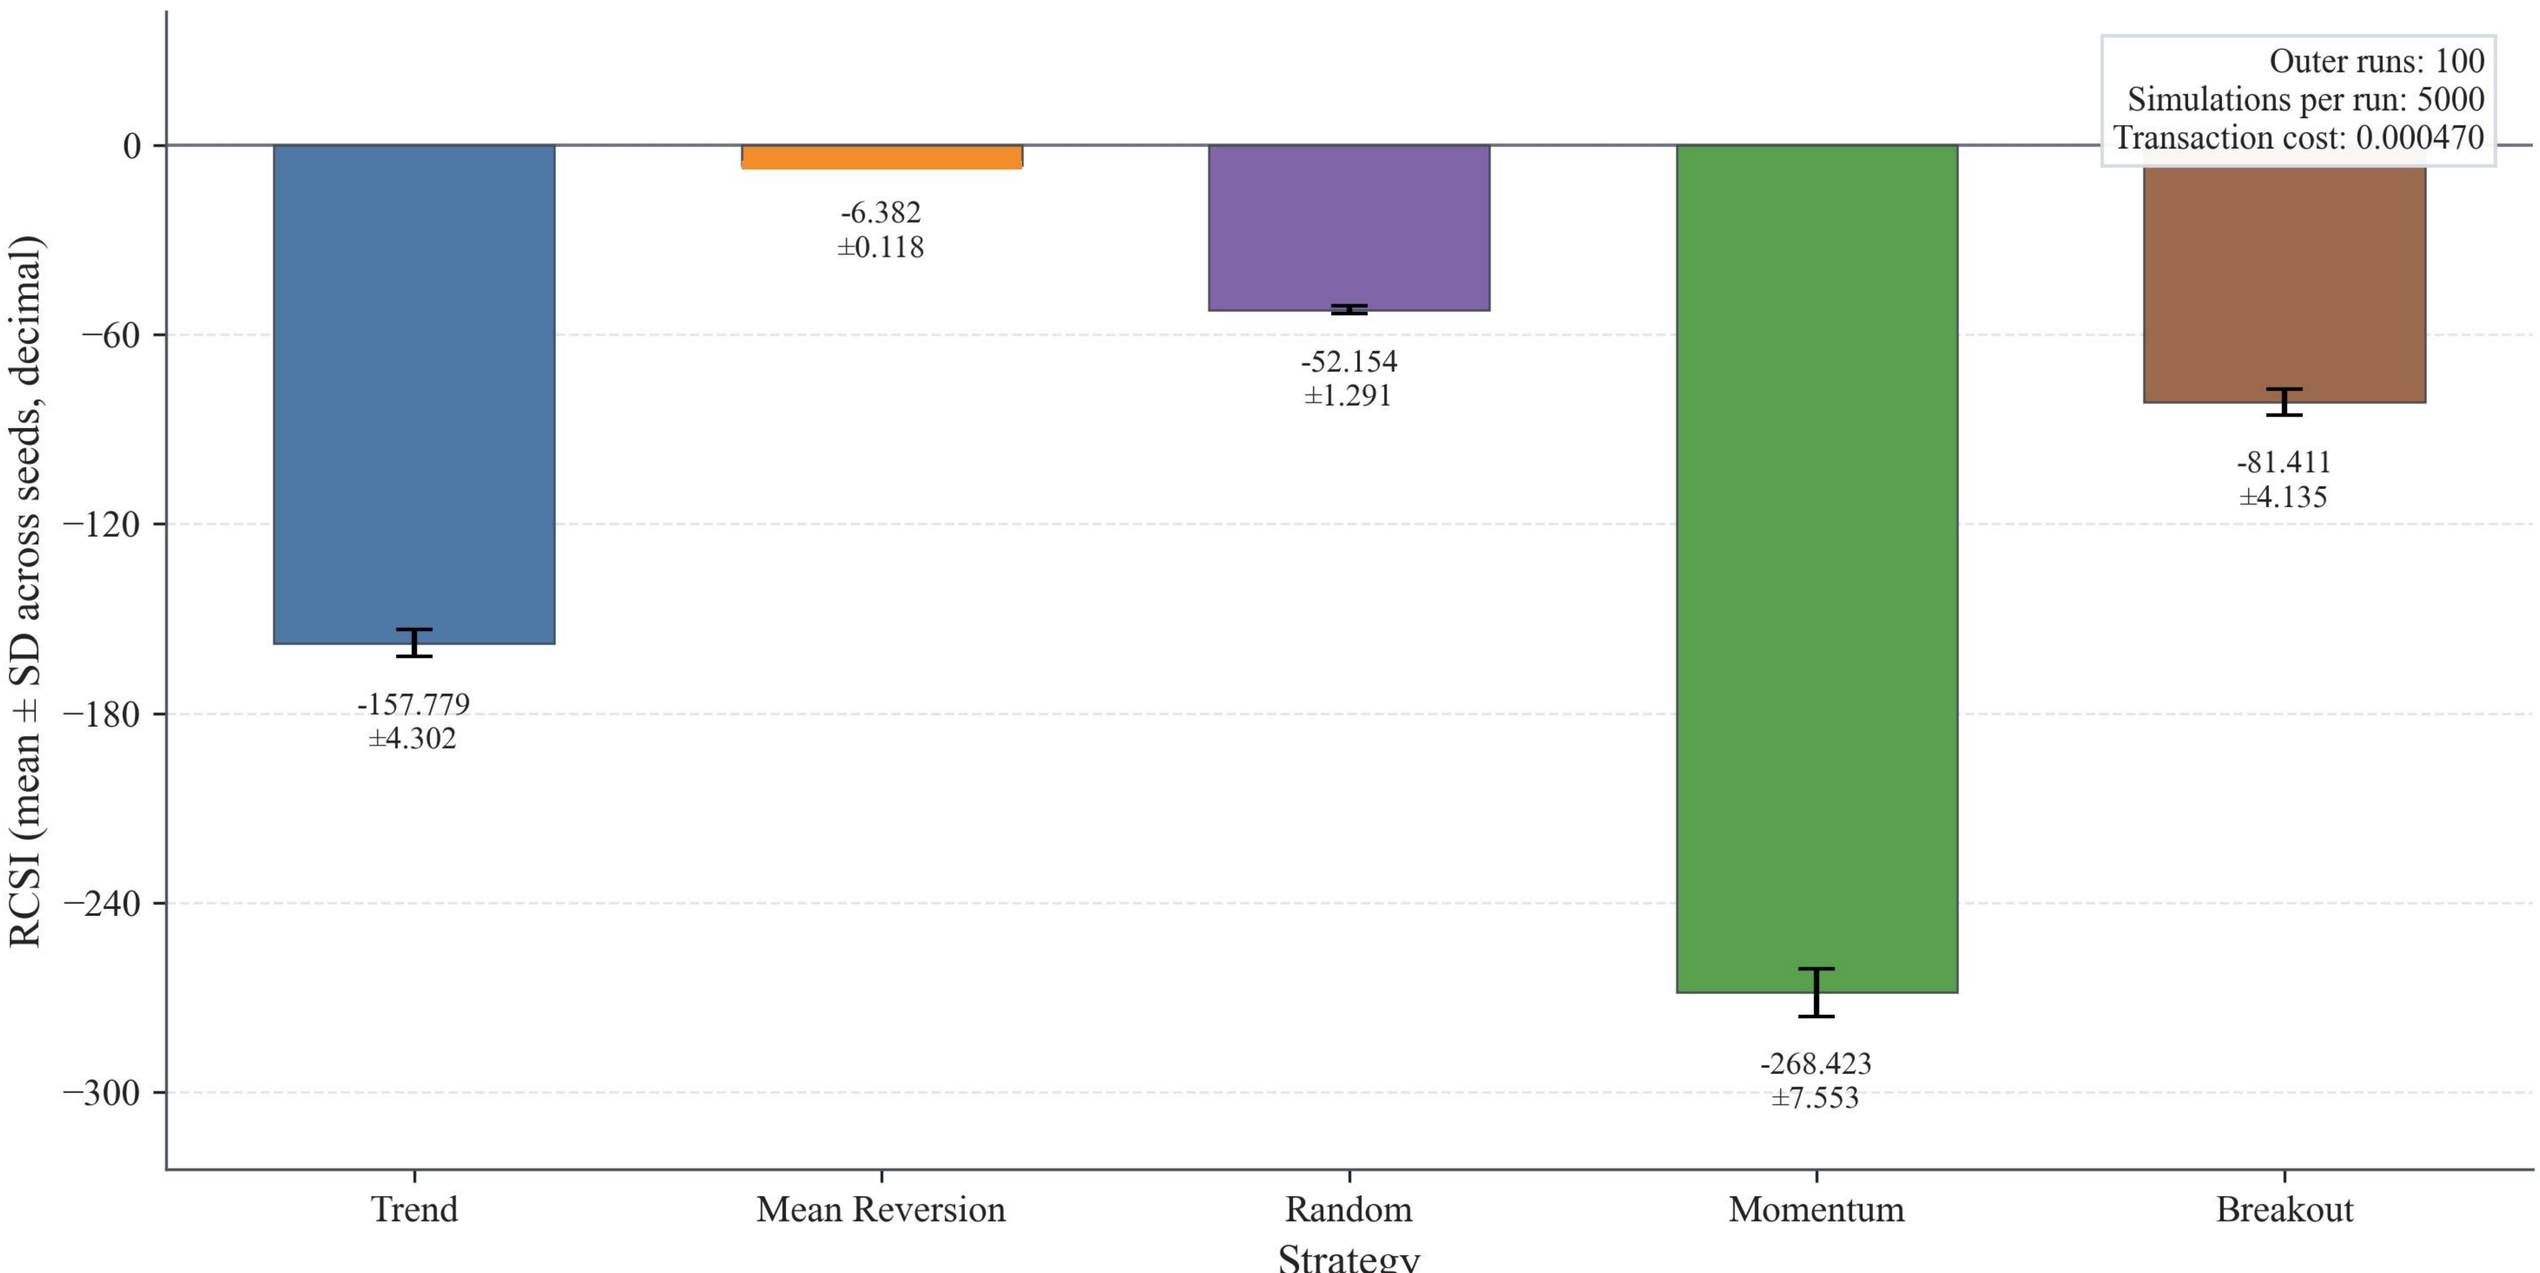
AAPL: Monte Carlo Distribution of Final Returns, Momentum Strategy



AAPL: Monte Carlo Distribution of Final Returns, Breakout Strategy

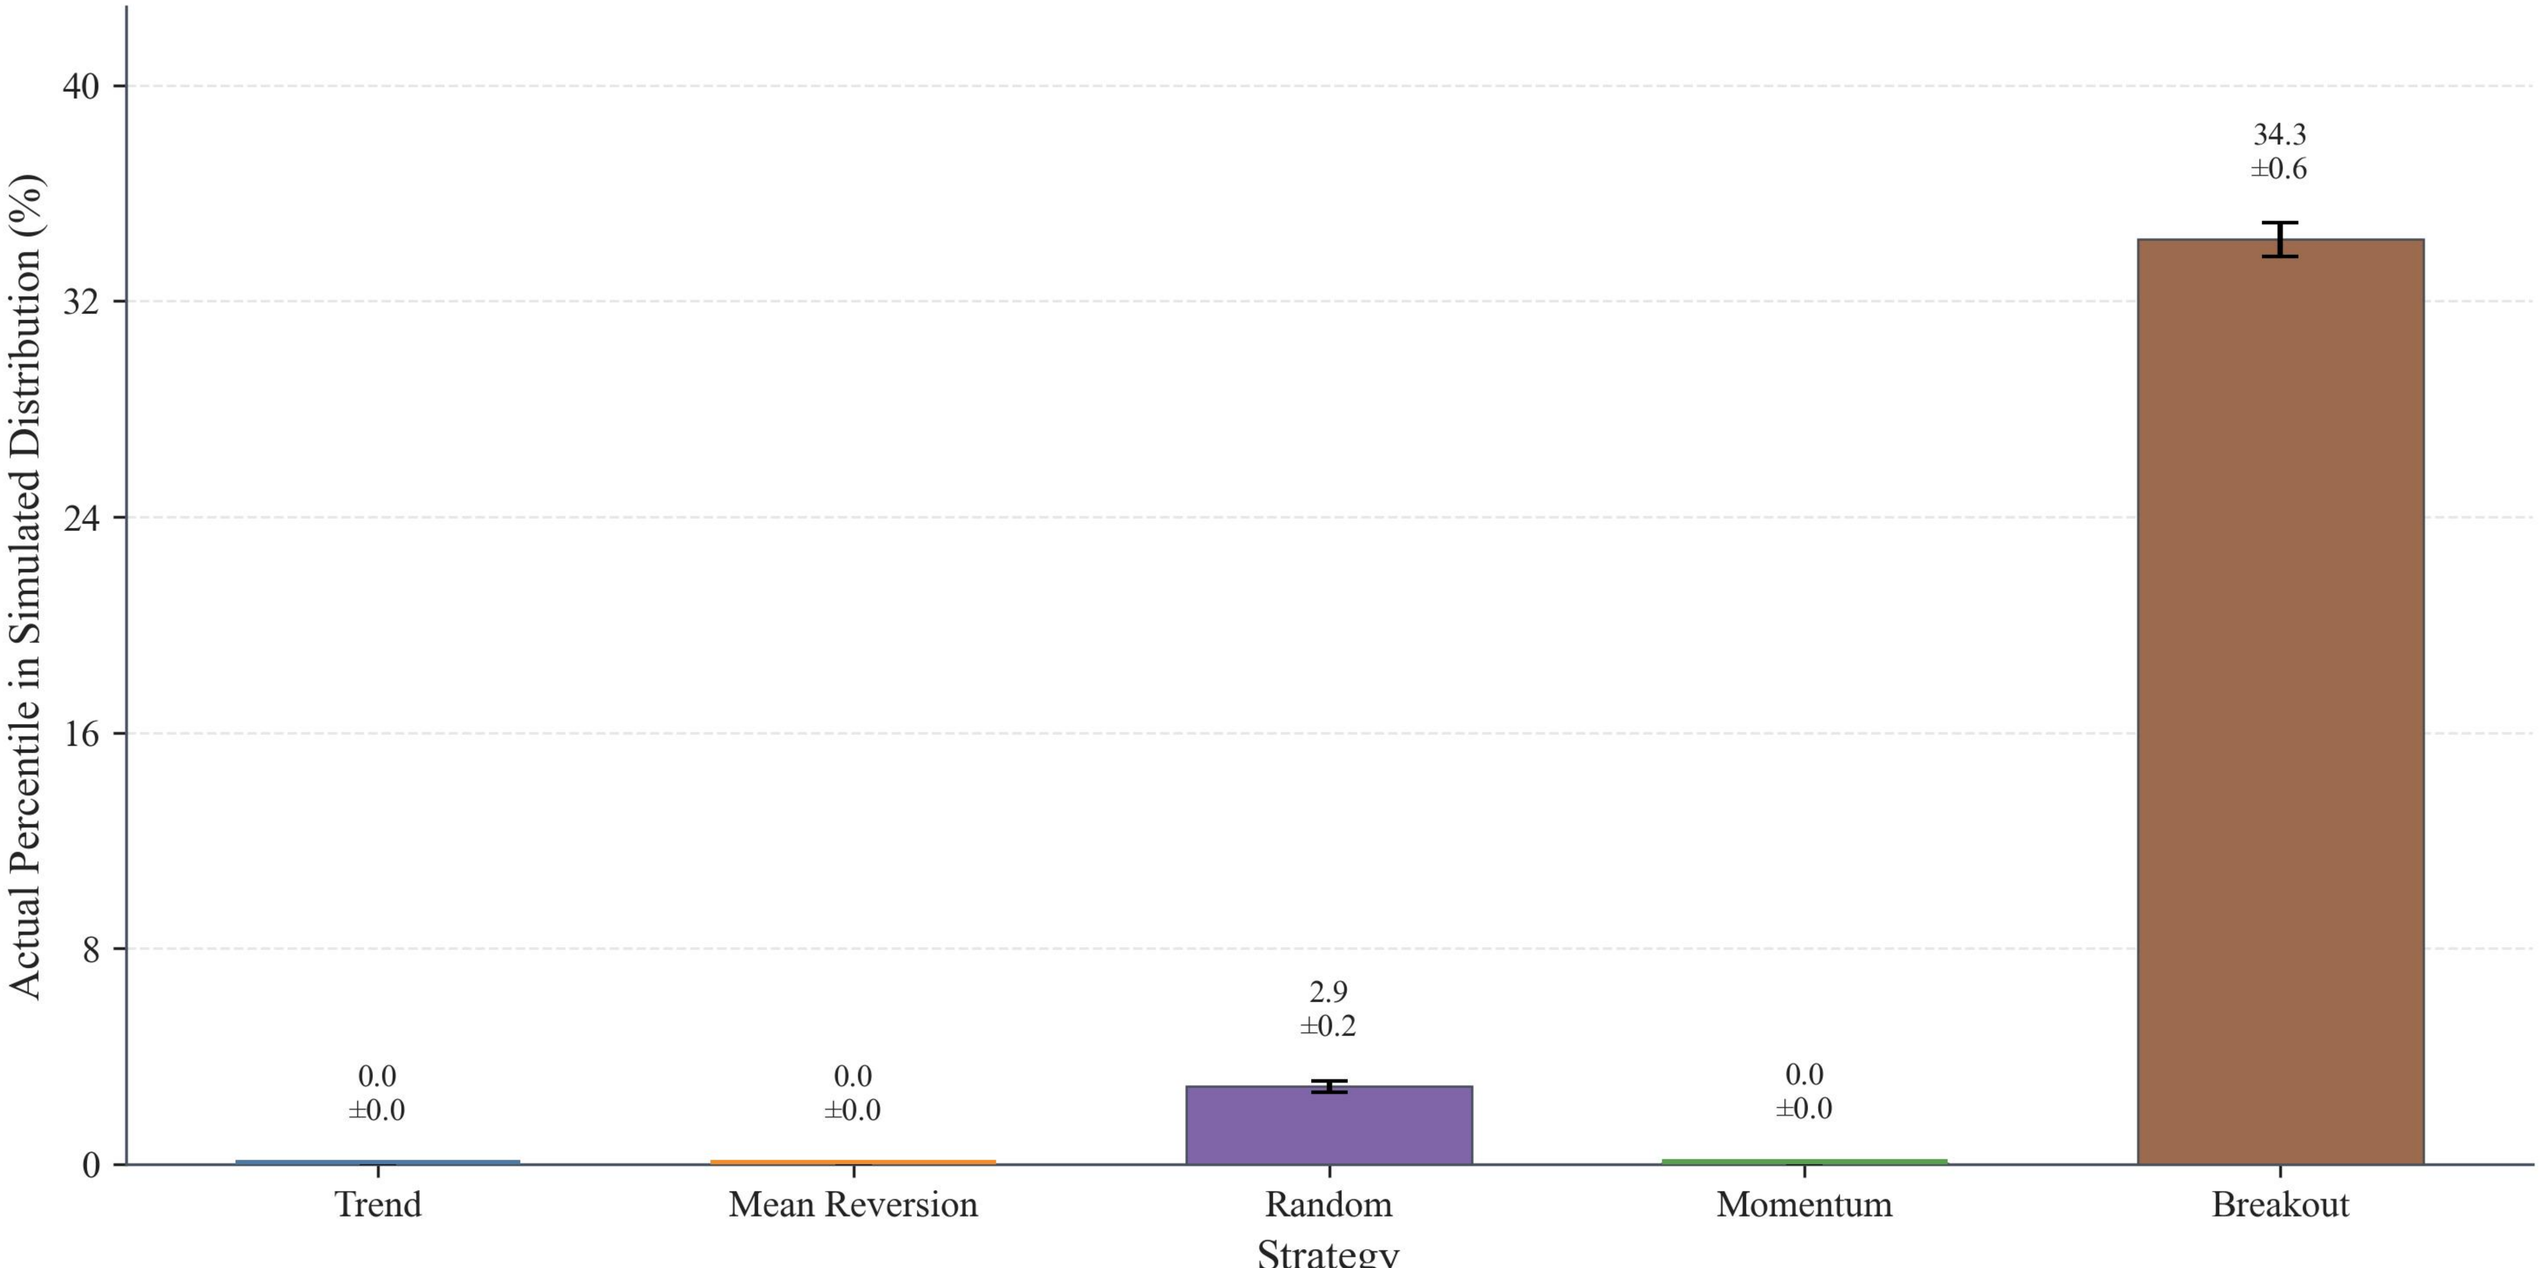


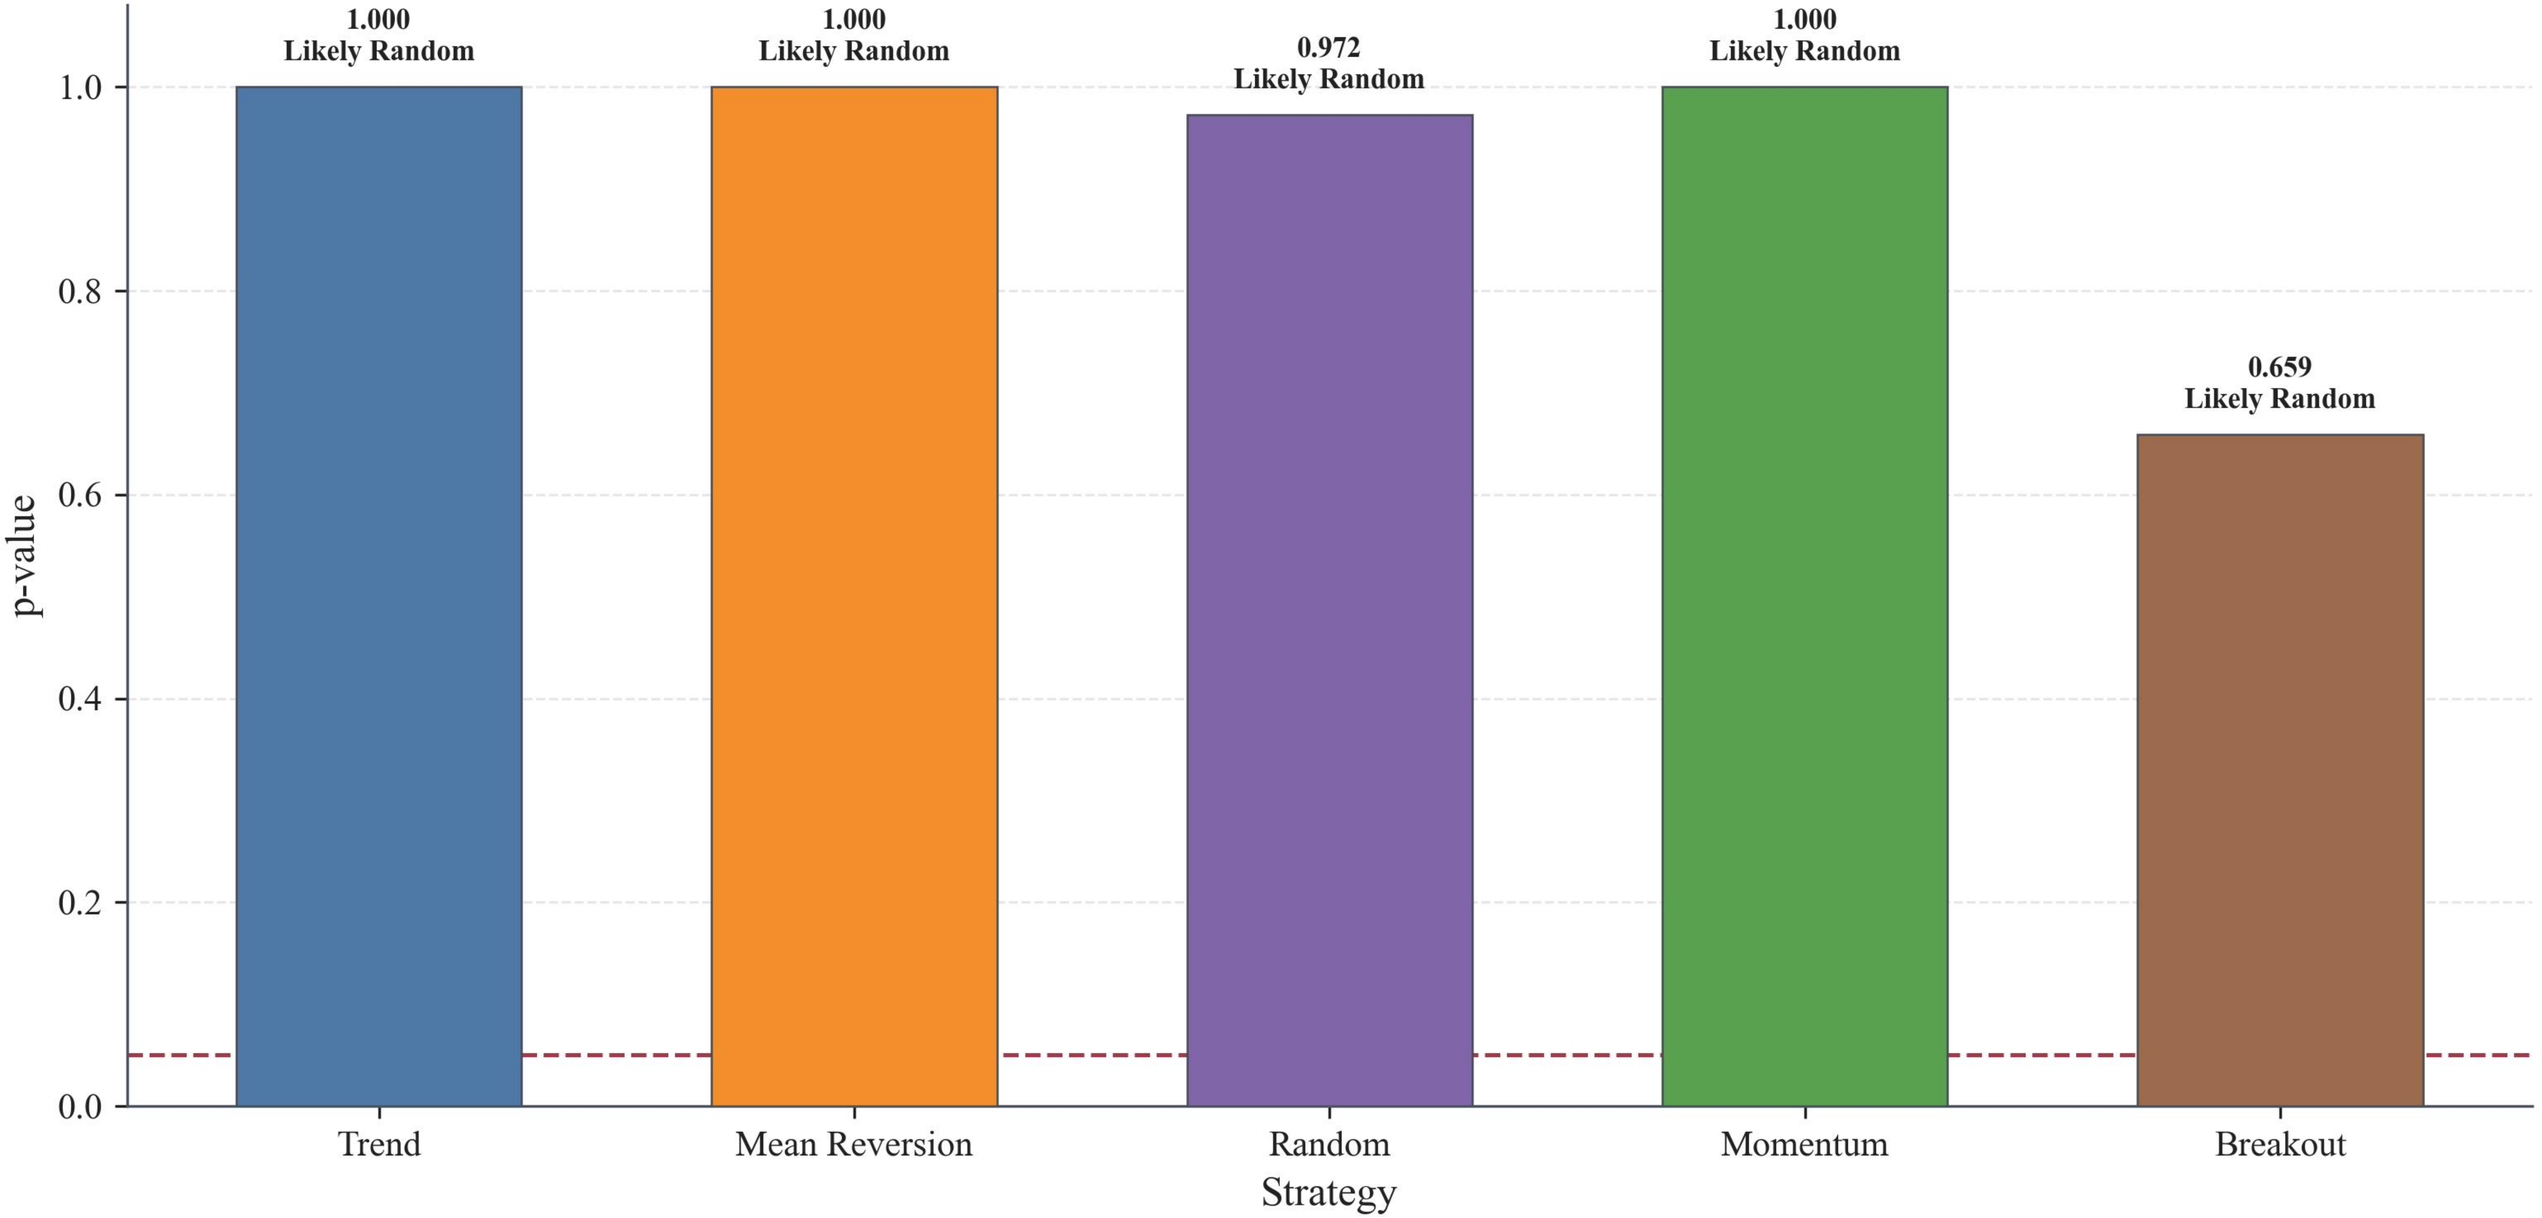
AAPL: Monte Carlo Robustness of RCSI Across Seeds



AAPL: Monte Carlo Robustness of Actual Percentile Across Seeds

Higher values place the observed outcome deeper into the right tail of the simulated distribution.



AAPL: Monte Carlo p-Value by Strategy


The dashed line marks p = 0.05. Lower values indicate stronger evidence against the simulated-random baseline. Labels show the overall evidence class.
