BTC-USD: Strategy Evidence and Confidence Overview

Evidence labels use scale-free statistics: p-value, percentile, normalized RCSI, robustness, and stability.

Strategy	Evidence	Verdict	Confidence	p-value	Prom.	Pctile	RCSI_z
Trend	Strong Skill	Skill	High	0.003	2.59	99.7	7.34
Mean Reversion	Likely Random	Luck	Moderate	0.957	0.02	4.3	-0.87
Random	Likely Random	Luck	Moderate	0.792	0.10	20.8	-0.54
Momentum	Strong Skill	Skill	High	0.010	2.01	99.0	4.10
Breakout	Strong Skill	Skill	High	0.020	1.70	98.0	2.86

Interpretation:
Prom. = -log10(p), so larger values indicate rarer outcomes under the null.
Pctile and RCSI_z provide scale-free evidence and are more comparable across tickers.
Benchmark context appears in the comparison table and equity curve rather than this verdict summary.

Skill
Positive RCSI indicates performance above the simulated baseline (skill).
Negative RCSI suggests performance consistent with or below randomness.
Labels show the overall evidence class, not RCSI alone.

BTC-USD: Strategy Performance Across Market Regimes

Gray cells are suppressed because the regime cell has fewer than 20 trades.

BTC-USD: Daily Equity Curves by Strategy and Benchmark

BTC-USD: Monte Carlo Distribution of Final Returns, Trend Strategy

BTC-USD: Monte Carlo Distribution of Final Returns, Mean Reversion Strategy

BTC-USD: Monte Carlo Distribution of Final Returns, Random Strategy

BTC-USD: Monte Carlo Distribution of Final Returns, Momentum Strategy

BTC-USD: Monte Carlo Distribution of Final Returns, Breakout Strategy

BTC-USD: Monte Carlo Robustness of RCSI Across Seeds

BTC-USD: Monte Carlo Robustness of Actual Percentile Across Seeds

Higher values place the observed outcome deeper into the right tail of the simulated distribution.

BTC-USD: Monte Carlo p-Value by Strategy

The dashed line marks p = 0.05. Lower values indicate stronger evidence against the simulated-random baseline. Labels show the overall evidence class.
