USDJPY=X: Strategy Evidence and Confidence Overview

Evidence labels use scale-free statistics: p-value, percentile, normalized RCSI, robustness, and stability.

Strategy	Evidence	Verdict	Confidence	p-value	Prom.	Pctile	RCSI_z
Trend	Likely Random	Luck	Moderate	0.649	0.19	35.1	-0.48
Mean Reversion	Null-Like / Inconclusive	Inconclusive	Low	0.509	0.29	49.1	-0.14
Random	Null-Like / Inconclusive	Inconclusive	Low	0.354	0.45	64.6	0.24
Momentum	Null-Like / Inconclusive	Inconclusive	Low	0.454	0.34	54.6	-0.02
Breakout	Positive but Inconclusive	Inconclusive	Low	0.073	1.14	92.7	1.56

Interpretation:
Prom. = -log10(p), so larger values indicate rarer outcomes under the null.
Pctile and RCSI_z provide scale-free evidence and are more comparable across tickers.
Benchmark context appears in the comparison table and equity curve rather than this verdict summary.

Inconclusive
Positive RCSI indicates performance above the simulated baseline (skill).
Negative RCSI suggests performance consistent with or below randomness.
Labels show the overall evidence class, not RCSI alone.

USDJPY=X: Monte Carlo Robustness of Actual Percentile Across Seeds

Higher values place the observed outcome deeper into the right tail of the simulated distribution.

USDJPY=X: Monte Carlo p-Value by Strategy

The dashed line marks p = 0.05. Lower values indicate stronger evidence against the simulated-random baseline. Labels show the overall evidence class.
