EURUSD=X: Strategy Evidence and Confidence Overview

Evidence labels use scale-free statistics: p-value, percentile, normalized RCSI, robustness, and stability.

Strategy	Evidence	Verdict	Confidence	p-value	Prom.	Pctile	RCSI_z
Trend Pullback	Positive but Inconclusive	Inconclusive	Low	0.227	0.64	77.3	0.71
Breakout Vol+Mom	Likely Random	Luck	Moderate	0.662	0.18	33.8	-0.45
Mean Rev Vol Filter	Positive but Inconclusive	Inconclusive	Low	0.301	0.52	69.9	0.47
Vol Managed TSMOM	Null-Like / Inconclusive	Inconclusive	Low	0.375	0.43	62.5	0.23
Rel Strength Mom	Positive but Inconclusive	Inconclusive	Low	0.206	0.69	79.4	0.76
Random	Null-Like / Inconclusive	Inconclusive	Low	0.350	0.46	65.0	0.31

Interpretation:
Prom. = -log10(p), so larger values indicate rarer outcomes under the null.
Pctile and RCSI_z provide scale-free evidence and are more comparable across tickers.
Benchmark context appears in the comparison table and equity curve rather than this verdict summary.

Positive RCSI indicates performance above the simulated baseline (skill).
Negative RCSI suggests performance consistent with or below randomness.
Labels show the overall evidence class, not RCSI alone.
